When did you first notice your inability to learn new words? You must have noticed it by now..it's been pointed out to you by everyone here having over a grade nine education.

Those military chemical experiments have certainly taken their toll on your cranium. That in itself is amazing, as it's so shielded from the outside world.

I wonder if this is the work of the same morons who think that Eminem will sway terrorists from killing us. The oppressed Muslim masses don't need to hear news and shows from the American viewpoint; they need to hear RAP MUSIC! Brilliant! With geniuses like this running the "winning hearts and minds" op, we're surely doomed. They'll listen to Snoop Dogg and be newly energized to blow us up, secure in the knowledge that America is indeed degenerate and evil.

I say that if the incompetent federal government can't effectively represent America's interests on shortwave, then private individuals need to step up to the plate and work on broadcasting American views to our enemies. We need to rent transmitters, produce programs, and get those programs translated into the major languages of the Middle East, including Arabic, Farsi (Iran), Urdu (Pakistan), Pashto, Dari (Afghanistan), and the tribal dialects of the Hindu Kush where Osama hides out. Most of these languages have speakers in the US.

When our enemies can more readily hear news from the Netherlands than from the US, the US has a big problem.

I believe I have one of these. I bought it new from Sears in 2000. If I'm right, this has AM, FM, and TV 2-13 with weather band. It's a nice radio, but I didn't like the way the FM band was squashed all the way over to the right on the same switch as one of the TV bands. Having the FM band bulldozed all the way over to the right prevents selective tuning.

My first SW radio was a Halli S-40, given to me by a local ham because I had taken an interest in SW but my parents couldn't afford $150 for a new portable (a lot of money in 1986, AND it was analog!) I loved that radio, but eventually the dial cord broke, and when I got it back it wasn't the same. I later learned that the 40 is hard to align, and the guy who replaced the dial cord had done it wrong. It was never the same after that. Over the years the rectifier went bad (an 80) and the capacitors started to go bad. Finally I sold it for $20 to an old man who worked on old ham gear for fun because it was getting way beyond my ability to restore. Lost sensitivity is probably a result of one of the tubes going bad, I had the same problem with my 40 and all it needed was a new tube.

We're probably talking government and military data comms. In that case,
it would be essential to encrypt it. Private services have moved to
satellite for the most part. The military needs the mobility that
shortwave provides-you can't haul a satellite dish around Baghdad, even
a small one. Private organizations don't, so they use satellite.

Only problem with the 2010 is a lack of tunable SSB. Fine if you're just listening to broadcasts, not fine if you're listening to hams. Of course, I didn't see the original message, but I wanted to point that out for anybody considering a 2010.

How about for keeping common mode noise from the house reaching the antenna?
Of course this is better accomplished by a 1:1 isolation transformer nearer
the RX.

HF is used commercially to send data to ships.
http://www.globewireless.com/solutions_list1_hfradio.php
HF is useful for communicating with planes over the ocean.
http://spacecom.grc.nasa.gov/icnsconf/docs/2003/04_B1/B1-05-deBarros.pdf#search='hfdl'

not at all then of course your radical editing makes me guess at
exactly what was said

but clearly someone said that something was "not long ago" but was more
than 20 yars ago

which is certainly a LONG time ago in any tech related feild

but if you have to resort to fucking the context that badly to try and
make a point you obviously did not have one in the first place

prehaps your trust is misplaced

the only body with the POWER to make that promise and keep was the FCC,
today the NEVEC could make it but then only the FCC, and I have found
no evidence they ever made any such promise

I have Heard the ARRL said something like this may have been said by
the ARRL but they lack the power to make such a pledge

an aside I find it amusing that a memebr of NCI is explain this but Ron
Baker's statement is incorrect because it is incomplete he should have
type (caps mine) "Hams are prohibited from sending SECRECTLY coded
communications."

Morse Encoded OOKed CW is not asecert the same rule allows PSK #! the
code is known, there was a discusion last July i think on RRAP to the
effect that Likely a coded messge by some PGP could be send over ARS if
the loctcation of all the keys were tranmited in the clear. it was
alsoagreed that the FCC would likely fght that battle out

38. WWV receiver, CHU proposal...http://cbc.am/CHU.htm

Newsgroup: rec.radio.shortwave
Date: 2006-02-01 05:24:46 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <drph11$1me$1@gnus01.u.washington.edu>
Source record: 60390
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.homebrew,sci.electronics.design

CHU Time Station : Western Canada Coverage Proposal

The CHU time station is Canada's domestic shortwave time signal station.
CHU existed long before the Internet and sattilite navigation systems like
(GPS, GLONASS, Gallaeo).
CHU provides most of the functionality of the US WWV & WWVB (Bolder,
Colorado) and WWVH (Kauai, Hawaii).

Problems with CHU's configuation that this proposal addresses

The 3.3�s per km of path that makes CHU's signals problamatic for users in
Western Canada. Even the NRC realizes this: "for all distant users of CHU,
the dominant source of time error comes from the radio wave path reflecting
off the ionosphere as the radio signal travels from the transmitter".
The poor quality of CHU reception in Western Canada and the Artic, North of
55� Latitude.
It is suggested that the 7335 kHz frequecny be reused, but it may be
advisable to find alternate frequences.
The CHU signal fomat may need to be tweaked so as to take into consideration
2 transmitter sites.
A new set of atomic clocks will be needed, as well as equipement to sync
them to NRC's atomic clocks. It may be possible to obtain secondhand atomic
clocks from UBC (Vancouver) or other universities in Western Canada.
This proposal could be replicated in Newfoundland using another existing CHU
frequency, as Eastern Canada has CHU coverage problems as well.
Universally upgrading CHU's Ottawa transmitters to 10 kw may not fix CHU
coverage problems in Western or Eastern Canada.
[...]

You more or less made my point, i..e. these coax chokes are kind of
unwieldy in the HF range. However, if it works for you, you can't
argue with success.

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

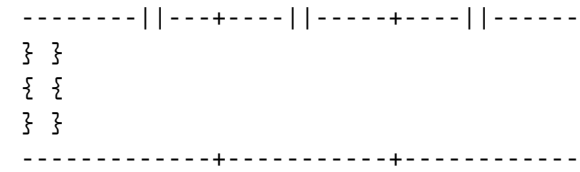
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

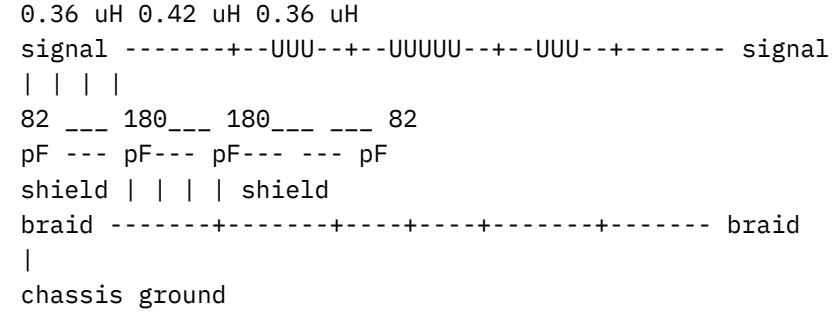
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

you HAVE to use a crystal oscillator. due to the nature of the tuned
resonant circuits, mistuning can change the propagation delay of the
signal through the receiver by incredible amounts. soooo, you have to
be on frequency. i think I still have some where a schematic of such a
receiver from Popular Elactronics but it may take a while for me to
find it.

Hum.... It might come from anywhere... I have several email accounts, and sometimes I receive the same phishing emails within minutes on all accounts. So you can suppose it comes from the same people. When you trace back the IPs, one comes from brazil, one from asia, one from Alaska (yep it happens !)... So in fact they have a lot of mail relays to use and their program use randomly choosen smtp servers...

And it didn't Happen. It was Drudge that put this spin on it. I heard
the radio bit, when it first played. No elected official was in any
way refered to. The Secret Service took no notice of the bit.

Why is talk radio so conservative you ask?

Well, maybe the conservatives are trying to play catchup with their wildly successful liberal competition on NPR. Conservatives have been unable to create a single network that can provide the quality of programming and informative news that is available on NPR. Indeed the polished presentation skills of NPR talk show hosts far outshines the usual strident delivery of most conservative talk show personalities. Consequently conservatives have decided to flood the AM airwaves with ranting personalities like Rush Limbaugh spouting extremist gibberish for hours on end.

http://www.radioandrecords.com/Newsroom/2006_02_01/bostonacoustics.asp

Wednesday, Feb. 1, 2006
Boston Acoustics Lowers Price Of HD Radio Model

The high cost of an HD Radio has been a thorn in the side of those in the industry that want HD2 multicast offerings as an available option for the FM radio listener. Boston Acoustics has now decided to help out a bit by lowering the manufacturer's suggested retail price on its Recepter Radio HD from $499 to $299, effective today.

"We're very excited about the level of interest our Recepter Radio HD has had from both consumers and the media," Boston Acoustics VP/Sales Phil Cohn said. "We were the first to offer a table radio featuring digital HD Radio technology and we are the first to be able to make this technology accessible to a broader audience of radio listeners." Cohn added that his company continues to work closely with the broadcasting industry on the rollout of additional HD Radio-capable receivers.

More than 3,000 stations are in the process of upgrading to HD Radio broadcasting, with more than 700 on the air and several hundred also launching new multicast channels this spring.

The greater VOA family has felt the budget cutters ax before, so this rumor if true doesn't surprise me at all. VOA doesn't have the political champions it once had in the cold war so it is very vulnerable. Bush is looking in all the corners of government for ways to partially offset the ever increasing cost of our committment to a long multi-front war and a low visibility project like VOA is a good choice from his perspective.

Read just a bit into that announcement and it says people are not
lining up to buy an expensive recepter when the basic recepter works
just fine. I suspect that HD radio has a part to play in the way in
which radio broadcasts will be delivered to listeners in the future.
But as with other technologies the price will have to come down
considerably before great numbers of consumers will buy in.

It just came down $200 (40%). The regular Recepter doesn't pick up
all the channels the digital model gets, and is monaural.

I dont think it is a good idea to mess around with your phone line,especially when it is connected to the phone company,they might not like that.You can add on to your inside your home phone line with longer phone lines and add phone splitters for more items such as more phones,fax machines,computers on dialup,satellite tv set top boxes,whatever,but otherwise,messing with the phone line,,,, I dont think that is a good idea.I never have done it and I never will.The only thing that stays plugged into my phone splitter jack on my living room wall is my webtv set top box.I plug my phone in only when I want to use my phone.

>Wouldn't a ferrite work better? <

I think ferrite is a good choice too, but based on some other posts I've seen here, you apparently need a whole bunch of them to work really well (like, dozens or more). Maybe a combination of both methods would be workable for some. For me, and considering that it didn't really need additional weatherproofing, the coax coil worked out as a good solution for 11 MHz and up. Cost a bit less too.

Yes, but most buyers of high-end tabletop radios apparently view the
regular model as being sufficient for their needs - or said another way
they hear more than enough on the standard broadcast signals. The
added bells and whistles of the HD radio were apparently not worth 3x
the price to most consumers. At the new price BA may attract some

additional listeners.

We've seen it happen with each new technology, whether it is FM radio, vhs tapes, CD, DVD, memory based storage, plasma screens or lcd screens. The early adopters pave the way for the rest of us by purchasing enough of the new technology at very high prices to encourage manufacturers to find more efficient ways of manufacturing the item and produce greater numbers that take advantage of economies of scale. That way the majority can just sit back and wait for the inevitable cheaper prices.

Subject: Voting system examiners blocked from telling what they know?

Permission granted to copy, distribute, reprint, or cite if you
include the link http://www.blackboxvoting.org and credit source.

Voting system examiners in several states have reportedly
been prohibited from revealing voting system flaws to the
public due to nondisclosure agreements they signed with the
vendors.

With the future of democracy is at stake, just what agreements
were signed by examiners like Steve Freeman (CA), Brit Williams
(GA, MD, VA), Paul Craft (FL), Doug Jones (IA), and David
Jefferson (CA)?

Black Box Voting has learned that vendors have been requiring
nondisclosures to block release of information of critical importance
to the public. Secretaries of state have failed to protect their
voting
system examiners, reportedly requiring administrative rules that
prevent proper analysis and evaluation of voting systems by state
examiners.

Black Box Voting has filed public records requests to obtain all
nondisclosure agreements signed by Paul Craft, David Drury,
David Jefferson, Steve Freeman, Doug Jones, Brit Williams, Merle
King, and Michael Shamos.

We have already obtained one of the Diebold nondisclosure
requirements. Diebold attempts to block everything that should
be revealed -- even if the contractor is served with a subpoena
or court order!

BLACK BOX VOTING IS INVESTIGATING THE FOLLOWING ISSUES:

1) Whether voting system examiners have been provided
with indemnification. Failure to provide indemnification allows the
vendor to sue the examiner for damages if the examiner happens
to discover or expose something harmful to the vendor.

2) Whether voting system examiners were protected by their
secretaries of state. It appears that secretaries of state have
left it to the scientists who examine voting software to negotiate
their own terms of engagement with vendors. Some scientists,
who understandably are not experts in intellectual property law,
have signed the agreements provided by vendor attorneys. These
agreements can later prove to be unduly restrictive, preventing the

examiner from revealing what he knows even to the secretary
of state.

3) Whether state voting system examiners were prohibited from
examining the testing reports provided by Ciber and Wyle, the
federal testing labs. Documents provided to Black Box Voting
by Joan Quinn, a citizen in Sacramento, Calif., indicate that
California examiner Steve Freeman may not have had access
to key portions of the federal testing reports when examining
voting systems for the state of California.

4) Whether examiners were prohibited from examining the
source code and/or testing the equipment themselves.

5) Whether examiners were prohibited from asking the vendors
follow up questions by rules or administrative procedures .

6) Whether examiners were ever prohibited by rules or administrative
procedures from communicating with others on voting system
panels or certification boards during deliberations over certification
recommendations, or during/after voting system examinations.

7) Whether examiners are ever allowed to examine escrowed
information -- source code and/or "penetration analysis"?

Black Box Voting has requested copies of the rules, escrow
procedures, and any indemnifications, nondisclosures or administrative
procedures that apply to the certification, examination and
deliberation
process in Florida, Pennsylvania, Georgia, California, and Iowa.

PLEASE DO NOT LIMIT THESE IIMPORTANT INQUIRIES TO BBV EFFORTS

- Citizens are urged to gather evidence independently of Black Box
Voting, through Freedom of Information and public records requests,
to determine exactly what procedures, nondisclosures, restrictions,
rules and guidelines are in place for each state's voting system
examiners and certifiers.

- State senators and legislators, especially in the above-named
states, are urged to launch formal hearings, with subpoena power
and witnesses under oath, to investigate exactly what restrictions
were placed on voting machine examiners by vendors and
secretaries of state.

ANOTHER BREAKDOWN IN VOTER PROTECTION

Bruce Sims of San Diego, Calif. caught this problem:

According to 1990 FEC standards section 5.3, "Access Control",
voting machine manufacturers are required to provide federal
testing labs with a "penetration analysis" (hacking analysis). Did
Diebold, Sequoia and ES&S provide this to testing labs?

If so, why didn't the labs identify the massive Diebold holes exploited by a Finnish security expert in the 2005 Black Box Voting "Harri Hursti" projects, and by Dr. Herbert Thompson and Black Box Voting with the Diebold GEMS central tabulator, and by Jeremiah Akin with the Sequoia WinEDS central tabulator?

"All software (including firmware) for all voting systems SHALL incorporate measures to prevent ... unauthorized operations by ANY PERSON. Unauthorized operations include, but are not limited to: MODIFICATION OF COMPILED OR INTERPRETED CODE..."

This is exactly the "unauthorized operation" that Hursti performed in Leon County on May 26 and Dec 13 2005 in the Black Box Voting projects. Thompson's Visual Basic GEMS hack was also an "unauthorized operation" of the code, and the alterations in the Sequoia WinEDS code demonstrated by Jeremiah Akin are also "unauthorized operations."

When public officials and vendors explain to you that these hacks are not relevant because they require inside access, note that this FEC requirement applies to both outsiders and INSIDERS.

DID THE VENDOR EVER SUPPLY ACCURATE "PENETRATION ANALYSES?"

"The vendor shall provide a penetration analysis," the standards say. Setting aside for the moment the sheer stupidity of relying only on a profit-seeking vendors assessment of their own product weaknesses, the Diebold memos show that Diebold knew that its customized AccuBasic code could be altered to "do just about anything." Therefore, unless Diebold identified this in the "penetration
analysis" it was supposed to provide to the labs, it was out of compliance with FEC guidelines.

==========

From: Guy Lancaster
Date: Thu, 18 Nov 1999

"The 1.94w firmware does not keep a checksum on the Accu-Basic report program stored on the memory card. It sounds like that area has been corrupted on these but without a checksum, the Accu-Vote doesn't recognize the fact and report the error..."

From: On Behalf Of Steve Knecht
Sent: Tuesday, February 05, 2002 9:54 AM
Subject: AccuVote Tapes Results Report

> could we get an AccuBasic Report Option that just printed out the label and the ballots cast by precinct only for the zero and election night report...

Reply: "We can do just about anything."

==========

So, Diebold knew that the AccuVote results reports could be programmed to "do just about anything" and Diebold also knew that "firmware does not keep a checksum on the Accu-Basic report program stored on the memory card."

Did Diebold include this KNOWN information in its "penetration analysis"?

If so, why are the testing labs (Ciber and Wyle) still in the business of examining elections software?

If not, why is Diebold still in the elections business?

Not only is the memory card exploit findable and documented in the public record (at least since 2003 when the Diebold memos were released), but another "unauthorized operation," the use of a Visual Basic script to hack the GEMS central tabulator, has been widely known for years. The use of the MS Access database to perform unauthorized functions was publicly revealed by Black Box Voting in July 2003, but was documented by Diebold programmers back in Oct. 2001.

Aside from the memory card problems, were the GEMS penetration points documented in the penetration test sent by Diebold to testing labs?

REGARDLESS, WHY DIDN'T STATE AND INDEPENDENT EXAMINERS IDENTIFY THE PROBLEMS AND SPEAK UP?

Public records obtained by Joan Quinn reveal that California voting system examiner Steve Freeman did a five-hour "security examination" of GEMS after the exploit holes were documented publicly by Black Box Voting -- yet he recommended certification of the system, even after a critical protective measure for GEMS hacking was stripped out of the Diebold central counting system.

What is in his report on this? Black Box Voting has requested a copy, but due to the bizzaro-world nondisclosures, we believe we may be turned down for "security" reasons (even though it was Black Box Voting that first publicly identified the GEMS defects, on July 8, 2003!).

FEC standards:

"Such penetration analysis will be subject to strict confidentiality and non-disclosure by the test authority. For security reasons, the penetration analysis shall not be routinely distributed to the jurisdictions
that program elections. The penetration analysis, however, will be part of the escrow deposit."

HOW MANY SECRETARIES OF STATE HAVE VIOLATED THEIR OWN STATE ELECTION LAWS?

Many states have election laws that state something similar to this: "systems be safe from 'fraud or manipulation'."

Let us examine for a moment the responsibility of secretaries of state under their own legal responsibility to ensure that their voting system is "safe from fraud or manipulation."

- If the FEC standards requires that the ITA-examined and vendor-supplied "penetration analysis" be submitted into escrow, does the secretary of state have a duty to examine the penetration analysis?

- If a secretary of state authorizes a state examiner to look at the system, does the secretary of state have a duty to enable said examiner to conduct an unfettered examination, review federal testing lab reports, including vendor's "penetration analysis" and any testing lab comments on it?

- If so, does the secretary of state have an obligation to obtain the report of his own state examiner?

WHY WOULD A SECRETARY OF STATE HAVE THE CONTRACTOR NEGOTIATE/SIGN THE NDA WITH THE VENDOR, RATHER THAN THE SEC. STATE'S OFFICE?

If a nondisclosure is used at all, would not the correct party for the nondisclosure agreement (NDA) be the secretary of state, with the sec. state then invoking his own NDA on the state examiner?

In other words, it seems that a strange breach of duty may have occurred in locations where state examiners were forced into NDAs directly with vendors. Because the Secretary of State has a fiduciary duty to the taxpayers to ensure that voting systems are safe from manipulation, the examiner must be given free rein to disclose any and all findings with the secretary of state.

Thus, any NDA should be between the secretary of state and the vendor, with an employment or consultant's agreement executed between the secretary of state and the examiner. It is the secretary of state's duty to protect his own examiner from retaliation from the vendor.

Instead, it appears, the secretaries of state have stepped aside, have failed to provide examiners with the materials and access to the voting system reasonably required to perform an examination, have apparently failed to provide examiners with access to the penetration analysis, have failed to protect examiners from legal retaliation by the vendor, and therefore have failed to obtain the necessary information to "ensure that the system is safe from manipulation."

One of the tricks used by volume sellers is to pull a non performing auction before close, and then relist it later. You know about this from another seller.

With all this privacy in his auctions, it's not inconceivable that Martyn is closing out an auction without a sale because prices don't hit expected highs, and then bring the same item back after a time, and conversation in the community brings up interest. With privacy, he can even let the auction run to term, but top biddder can be a dummy account, or an ally, so that no sale results.

Make no mistake, the talk on this newsgroup is closely monitored for any hints as to trends of interest in product lines.

Start a thread, about looking for Galaxy SW receivers for instance, and watch them pop up on e-Bay.

Or post a listing here for a radio for auction, and watch the same radio popup by other vendors...often with the same listing copy and photographs.

WRTH is pleased to announce that an update file (dated 31st January 2006) for the printed edition is now available to download. The file is in PDF format and is less than 80k in size. To download this file, please visit the WRTH website at: www.wrth.com and click on the "Latest PDF Updates" link. This will take you to a page where you can download this file and a number of previous updates. For clarity, stations that have come on the air since WRTH 2006 was printed are marked in blue type.

We hope you find this file a useful companion to the printed edition.

Regards,

Sean D. Gilbert G4UCJ/G4001SWL

I have never found a mass-produced radio that was properly aligned.A good first step is to tune the ferrite antenna to the maximum gain. The oscillator coil is usually the one with a red core. Tune the radio to about 570 for white noise or a weak station. Then adjust the oscillator coil for maximum gain. You may have to follow the weak station up or down the dial as you look for the signal peak. Next find the rf trimmer and adjust it for maximum gain at 1500. Then go back to the red-marked oscillator coil and readjust it for peak. It should not need much of an adjustment. Do this several times until the gain is ok at both 570 and 1500. For dedicated knob-twiddlers you can also ajust the oscillator trimmer to extend the range to 1700. I have found that careful alignment so increases the gain that further mods are not necessary. You will probably have to adjust the dial pointer mechanism to get the numbers right. No test equipment is necessary but you should have a proper screwdriver to avoid cracking the coil core.

KERRY CLAIMS: 53% OF CHILDREN DO NOT GRADUATE FROM HIGH SCHOOL
Wed Feb 01 2006 10:43:40 ET

Sen. John Kerry claimed this morning on NBC TODAY that 53% of America's children do not graduate from high school -- a claim that raised eyebrows in the NBC control room, sources tell the DRUDGE REPORT.

Kerry made the comments after host Katie Couric asked the former presidential candidate about Bush's State of the Union call to train 70,000 additional teachers in math and science.

COURIC: He wanted to train 70,000 additional teachers in math and science.

KERRY: That's terrific. But 53 percent of our children don't graduate from high school. Kids don't have after-school programs... He didn't ask America to sacrifice anything to achieve great goals and the biggest example is making the tax cut permanent for the wealthiest people in America. The average American struggles to find time to take carry of families, working two or three jobs... It's a disgrace. He did not tell the real state of the union.

Kerry's 53% claim conflicts with a recent press release from the U.S. Census Bureau: "High School Graduation Rates Reach All-Time High"

And the Census Bureau's own website states: 85.9 Percent Of Americans Aged 20-24 Are High School Graduates. (U.S. Census Bureau Website, www.census.gov , Accessed 2/1/06)

The web site,
http://www.higheredinfo.org/dbrowser/index.php?submeasure=36 shows in
2002 the national average for "public high school graduation rates"
was 68%. Of course, that measures only those who reached high school.
Many don't, so Kerry's figure could be creditable.

how does that line go "lies Damned lies and Satistics"

after all what difference does it make (to wether the idea at issue) if
40 percent or 80 percent in both cases we'd like to do better, the
president at least threw out an effor to do something positive

If you get a GED, you technically didn't graduate from high school.

The real question is what would a graduate of the Bush science program
get to teach? Creationism? Intelligent design? Global warming is false?

Seldom is the question asked: Is our children learning?

The reputable sellers photograph the exact item they are selling, even
when they have more than one to sell. Note that Radio-Mart has two
different radios for sale with the exact same photographs:

<http://cgi.ebay.com/Icom-IC-R-100-Receiver-Super-Wideband-Receiver-Look_W0QQitemZ5859568179QQcategoryZ4673QQrdZ1QQcmdZViewItem>

OK,how about Sears (transistor)Travler AM/FM/Shortwave big old heavy semi portable table top radios? I own one that I bought at a Goodwill thrift store for four dollars about nine or ten years ago.When I bought the radio,the mechanical push buttons on top of the radio and the on/off/volume control switch were and still are worn out.I can get the radio to working,but I have to mess around with them push buttons and the on/off/volume control switch too much.Otherwise,I really like the beat up old radio,when it works,it works real,real good.I wonder what radio manufacturer built those radios for the Sears stores?.Boatanchor?,that radio is sooooo heavy,it could anchor the USS Enterprise Ship.

There was a period when FCC considered ASCII to be a "secret code", and
prohibited its on-air use by hams.

Seriously.

Touche! :) Besides, without large numbers of conservative talk show
hosts, AM radio would have DIED an unholy death 20 years ago. All these
extremist ranting far right talk show hosts have kept AM radio in the US
from utter extinction. They're literally its bread and butter. The only
other significant formats on AM are evangelical preaching and Spanish
language formats meant for Mexicans who may not have cars with FM
radios, or who may not be familiar with FM (FM's limited distance makes
it impractical outside of major cities, and Latin America has a large
amount of sparsely populated jungle and desert). In major cities AM also
provides a home for other languages such as Asian tongues where there is
a demand for native language programming but the community doesn't have
a lot of money. AM provides cheap airtime. Outside of a) right wing
ranters b) preachers and c) foreign languages there is NOTHING on AM.
All the music is on FM, and satellite radio is just beginning to cut

into FM listenership. So basically, if you buy an old radio on Ebay and it doesn't have FM and you need to test it out the right wing provides a way to do that. :)

Here's the skinny ...

-----BEGIN------

Subject: Transmission Reductions
Date: Sat, 28 Jan 2006 07:45:00 -0500
From: George Moore, Director of IBB Engineering and Technical Services

Gentlemen,

Fiscal Year 2006 and 2007 budget constraints for the Broadcasting Board of Governors require implementation of across the board efficiencies so that our overall broadcast mission can concentrate on its support of this country's war on terrorism. The nation's need to secure and bolster its defenses against terrorism, the terrible damage and cost of recovery caused by hurricane Katrina, added to an already high U.S. Government budget deficit, means that our broadcasting mission must become more focused.

In realignment of funding for 06 and 07, we have to reduce shortwave transmissions throughout the network for most of our broadcast services.

Approximately 90,000 transmission hours will come off of the network. These reductions will provide greater flexibility within the network for Engineering to realign its transmission assets to achieve maximum effectiveness for its target areas. Operational orders implementing these reductions will be sent to all stations in the next few days, effective February 1st, that will provide further details of the individual station reductions.

In addition to these reductions, it is possible that further efficiencies will be necessary to meet the budgetary goals and objectives that have been established by the President.

As you may "read" into this message, the next few years are going to require the Agency to make very difficult decisions.

I'm providing you with as much information on the budget situation as I can at this time. You may use the information in this email to brief your staff, as they will be concerned when they see the reduced schedule.

Very Best - George

If NMPR is so successful, why is it that they need government funding for
100% of their operation? Contrast that to conservative talk radio, which
barely has enough time to fit in all the interested advertisers.

I believe that this frequency is used by Radio Free Asia. Sometimes you
can hear RFA u7nderneath the jammer, and sometimes you can't.

Where did you get the idea that these are gain adjustments? They adjust the
FREQUENCY of the local oscillator, and assume that the ferrite antenna is
properly tuned as well. The adjustments you describe do *nothing* to
adjust the ferrite antenna.

Excellent portable set, the 'SW77. On a par with Sony's venerable ICF-2010 in terms of performance. It's my opinion that the SW77 offers superior performance to any compact portable set on the market today, although the 'SW77's performance will not match that of Eton's new E1 portable.

The 'SW77's one real flaw is the chuffing that accompanies manual tuning with the tuning wheel/disc. Other than that, I would say that it's top-notch all the way.

If you've found a good deal on the 'SW77 and you're looking for a premium grade portable, it's worth going for.

Best,

junius

118. CHU Time Station : Western Canada Coverage Proposal

Newsgroup: rec.radio.shortwave
Date: 2006-02-02 01:28:25 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <drrn7vidk1@gnus01.u.washington.edu>
Source record: 60670

CHU Time Station : Western Canada Coverage Proposal

The CHU time station is Canada's domestic shortwave time signal station.
CHU existed long before the Internet and satellite navigation systems like
(GPS, GLONASS, Galileo).

CHU provides most of the functionality of the US WWV & WWVB (Bolder,
Colorado) and WWVH (Kauai, Hawaii).

Problems with CHU's configuration that this proposal addresses

* The 3.3�s per km of path that makes CHU's signals problematic for users in
Western Canada. Even the NRC realizes this: "for all distant users of CHU,
the dominant source of time error comes from the radio wave path reflecting
off the ionosphere as the radio signal travels from the transmitter".

* The poor quality of CHU reception in Western Canada and the Artic, North
of 55� Latitude.

It is suggested that the 7335 kHz frequency be reused, but it may be
advisable to find alternate frequencies.
The CHU signal format may need to be tweaked so as to take into
consideration 2 transmitter sites.

- A new set of atomic clocks will be needed, as well as equipment to sync
them to NRC's atomic clocks.
- It may be possible to obtain secondhand atomic clocks from UBC (Vancouver)
or other universities in Western Canada.
- This proposal could be replicated in Newfoundland using another existing
CHU frequency, as Eastern Canada has CHU coverage problems as well.
- Universally upgrading CHU's Ottawa transmitters to 10 kw may not fix CHU
coverage problems in Western or Eastern Canada.

I really like the Sony ICF-SW55, it is sensitive, selective, sounds good and
is a lot of fun to use ! It is also WELL built ! I recently was able to
purchase one originally from Germany so I am selling my american version 55.
it is in great condition and comes with
Two cases, soft and hard
AC adapter
several manuals/booklets
radio shack reel antenna
earphones

my price is $225 plus s few for shipping
pics are at www.maghakian.zoto.com
email me direct if interested, do NOT reply here !!!!

Most of the mass-produced radios lack the RF coil to properly match the ferrite antenna. As you adjust the oscillator coil you will find a spot where the gain of the circuit is optimum. You are not adjusting the ferrite antenna: you are matching the oscillator to wherever the ferrite is tuned to. This will produce stronger signals. Try it.

Maybe not Eminem, but corrupting the minds of youth with MTV is a good idea. The population of the Muslim nations is quite young, so MTV mind-programming would work well.

Sears had Silvertone. If that's indeed a Sears radio, it may be Sears
Canada. I've heard the name Travler before, but I can't quite place it,
and I thought they mostly made tube radios. I think that Allied made a
whole lot of radios for a whole lot of stores under a whole lot of names
with different trim.

Is there some Black Hole of Radios into which Martyn and others can reach in and magically pull out like-new 70 year old sets in any brand and model desired? Is there a radio store owner on the prairie in 1939 wondering why anybody would want to steal his stock, and how they could do it without waking him up? I suppose we're dealing with technology taken from the crashed alien ship at Roswell, used not to better the world but to find mint condition old radios to auction on ebay.

Hi Bruce,
The coax loop is a good solution for HF- particularly if you have G.D.O. and
can select the number of turns that achieves self resonance in the middle
of the freq of interest.

And remember on the ferrites- if they are big enough, you can make multiple
passes through them- the reactance goes up as the square of the number of
turns- saves on ferrites.

****
Actually, this type of radio doesn't have good dial accuracy out of the
box, so the tuned version is not much different than the original as
long as the tuning device is adjusted.
This adjustment is made to have the oscillator 455 khz higher than
whatever the ferrite is tuned to. Since there is no easy way to adjust
the ferrite, adjust the oscillator coil until it is 455 khz higher than
the antenna (ferrite) coil. You will find a spot where the signals are
the loudest. This is where the correct difference frequency is 455 khz
and the gain is maximum through the IF. For example, if the station you
want to receive is at 600 khz, and the antenna is tuned to 610 khz due
to manufacturing tolerances, the oscillator must be tuned to 1065 khz
to have the correct difference frequency. Since the oscillator is the
only thing that can be adjusted, you adjust it. The IF is happy: all it
wants is a 455 khz signal. The increase in gain is especially
noticeable from 550 to 700. All the radios I have tuned could easily
add the new 1600 to 1700 frequencies. The 455 khz IF coils are quite
stable: I haven"t run into any that needed adjusting.

Most radio manufacturers use as cheap quality parts as they feel they can get away with.Do a search for Bliss' No Right Clicking and look for the Computer Shopper link.My computer uses high quality parts.(there really is a big difference in quality of them silicone wafers) and those Dells and HP's and Compaq's and emachines and Gateways use cheap low quality parts.That is why they can sell those low quality computers and low quality radios at such low,low prices.

Sharp buyers acquire radios that are hot tickets, at low prices, and spin them quickly. But other buyers will speculate on items with popularity that ebb and flow. Galaxy radios are such. So, buyers like Martyn acquires a Galaxy when they're not particularly interesting, hold's it until Galaxy's become hot, then puts it on the block. More than one vendor I know of has done this.

One goof on the newsgroup, when R-2000's were suddenly the rage, came up with a pair of them, with a tale of acquisition that made no sense, and when they didn't sell at the expected price, hammered the newsgroup with them, lowered prices, until he claimed they were sold. Actually, one was sold, returned, and then they both went to e-Bay, but he didn't publish that.

No, there's no black hole. But there are a lot of rigs out there forgotten on shelves, or in shacks, that suddenly find themselves listed for sale when there's an interest in them. Oddly, they all seem to come from the same group of sellers.

This isn't a phenomenon limited to radios. Or electronics, for that matter. Sellers of car parts and memoribilia do this all the time. 10 years ago, I stumbled on a box of Studebaker carburetors. Two were used, one was rebuilt by the Carburetor Shop, and 5 were new old stock. I bought them all for a pittance, and held them. One of the new ones I put on my Champ. The rest...went to e-Bay about 2 years ago, when action

Stude carbs was up.

I did pretty well with them, too.

You could try J&R. Go to http://www.jandr.com

Also, you could try Universal Radio. Go to
http://www.universal-radio.com . Here, it is advisable NOT to order
online. Call 'em at their toll free number to place an order, and it's
not a bad idea to confirm w/them right then that they actually have the
product in stock before finalizing an order.

>
> The government provides way less than half of NPR funding.

Right. Below is from http://www.npr.org/about/privatesupport.html :

NPR supports its operations through a combination of membership dues and programming fees from over 780 independent radio stations, sponsorship from private foundations and corporations, and revenue from the sales of transcripts, books, CDs, and merchandise. A very small percentage -- between one percent to two percent of NPR's annual budget -- comes from competitive grants sought by NPR from federally funded organizations, such as the Corporation for Public Broadcasting, National Science Foundation and the National Endowment for the Arts.

Published reports in Worth Magazine and Consumers Digest cited NPR as a leading U.S. nonprofit charity because of the organization's program spending efficiency, high level of private support, and outstanding public service.

On average, public radio stations (including NPR Member stations) receive the largest percentage of their revenue (34%) from listener support, 25% from corporate underwriting and foundations, and 13% from CPB allocations.*

(* These figures are derived from the most recent CPB data available, FY02. The remaining average revenue breakdown is: 6% from local and state governments, 15% from institutional support, and 7% from all other sources.)

It is not a real portable radio,
becasue it must be carried around
with both hands.
A slide ruler for volume control
looks a little bit "cheapy".
On FM waves there is no
indication if you are in STEREO or
MONO mode.
And the biggest flaw about that radio
is a strong "birdie" around 3.640 Mhz (LSB, USB or CW).
But on the other side it is a very useful and nice made radio.

Experts issue warning about ï¿½Blackï¿½ computer worm

By Robin Holder

The SANS Internet Storm Centre is estimating at least 700,000 computers have been infected by the 'Black' worm and on February 3 it will delete all documents.
Quo Vadis Limited vice president Stephen Davidson said: "We encourage residents to update their anti-virus software and run a complete systems scan before February 3 when the worm will begin deleting documents (Word, Excel, PDF's and a number of others)."
This worm is different and more serious from other worms for a number of reasons.
At this point, the worm will be detected by up to date anti virus signatures. In order to prevent data loss on February 3, residents should use current (January 23rd or later) anti virus signatures.
This worm/virus has collected a number of names from various vendors. It is so far known as Blackmal, Nyxem, MyWife, Tearec among other names.
The worm spreads via e-mail attachments or file shares. Once a system is in a network is infected, it will try to infect all shared file systems it has access to.
It will disable most anti virus products and delete them. The worm will e-mail itself using a variety of extensions and file names. It will add itself to the list of auto-start programs in a user's registry.
A special Storm Center website on the problem can be found at www.isc.sans.org/blackworm.

That's not exactly true. Government largesse works in mysterious
ways.

Here's a civics lesson for you:

Advertising supported media is not free to tell you what you need to
hear. Too much conflict of interest.

If we are talking about a ferrite loopstick antenna, and if the coil is
wound on a cardboard former, the coil can be slided on the form to peak the
sensitivity on the lower end of the band. The trimmers peak the high end of
the band, and if the tuning capacitor has slits in the outer plates,
sections of these plates are bent to peak the sensivity in the middle of the
band, typically at 1000kHz. This is known as three-point tracking.
With some loopstick antennas, this is not an option because the wire is
wound directly over the ferrite form.

No doubt there is a preponderance of ranters and ravers on AM. But there is still some good stuff om AM too. I've got two DX oldies stations that pop into the east coast around 7:00PM. And the all news stations are always good for a quick update and traffic report. And to be honest I enjoy the mexican music when in California.

It's anyones guess as to where standard AM and FM broadcasting are headed. If satellite radio takes off and one standard emerges then I suspect that more quality programming will shift to that medium, but how much is a guess. I think it will take a merger of the two satellite radio providers before that will happen.

Dale W4OP <

Hi Dale - I've done this with standard electrical cords (like zipcord), but that's much smaller stuff and works OK with little snap-on types of ferrites. Your comment suggests that one would benefit from one of those great big toroids about 4 to 6 inches across, threading the coax through it many times - is that right? If so, is it best to wind it tightly, or does that risk messing up the construction of the coax?

Thanks,
Bruce Jensen

NPR is not 100% funded by payments from the government - the proportion
of government payments is a very small portion of their budget.

NPR is successful in the sense that it has a large audience because it
offers a wide range of programming that it's listeners want to hear.

It's surprising that it took this long, but there was a lot of
nostalgia tied up in the telegram so I can understand why WU held off.
The last time I sent a telegram it was to a family member as fun part
of a celebration. At one time it was a fast way of getting a message
through, but no more. I suspect the telephone was the first nail in
the coffin, followed by reliable and faster mail service, commercial
companies providing next day delivery and electronic communications.

Western Union has been a money and payments broker for quite a while.

That will probably never happen. The Duopoly is mandated by the FCC.

More likely is a single receiver that seamlessly receives both
providers. Also mandated by the dreaded FCC.

There's no electrical reason to use anything thicker than RG-58/U for
HF receiving. You can get 6 loops through your standard Radio Shack
ferrite.

Actually, something should be said with regard to the inferior quality FM reception you can often expect with the SW77. While some units are evidently not too awful, the FM section is notoriously bad on the SW77. For some units, you must off-tune from the actual frequency in order to clearly tune in a station. For mine, any heavy bass comes through with horrendous distortion. My earlier comments of praise for the SW77 were for shortwave use only. I've not used it much for MW reception; and, as stated, for FM reception, the SW77 is the pits. It would be nice if the only problem with the SW77's FM section were the failure to indicate stereo/mono.

> And the biggest flaw about that radio
> is a strong "birdie" around 3.640 Mhz (LSB, USB or CW).

Hmmm, I never noticed that before. Interesting. And true on my SW77, too, in LSB and USB modes.

The above is a much better tracking method if you have air variable
tuning capacitor, and the right kind of loopstick. The radios I was
referring to are the cheapies that use the tiny sealed variable cap,
glued loopstick coil, and made in the last 30 years. These radios only
permit one adjustment to improve alignment: the oscillator coil. I
don't recall when the industry abandoned the air variable, but I think
it was around 1975. Those radios might need a different method of
alignment as they might still have coils and trimmers long gone from
the scene. I have a few 365 mmfd 2-gang variables in my junk box that I
am thinking of putting on ebay because of the high prices they fetch
now. Does anybody still make them?

It's worth mentioning that perfect oscillator - RF tracking won't happen on typical radios which have the same profile on both the oscillator and RF sections of the tuning capacitor. It can be correct at two or three points, but it's going to be off a bit between those points. There's a wider frequency for the RF stage to cover than the oscillator stage and three point tracking is the best economical comprimise for most radios. Alot of the AM radios (not multiband) of the past had different profiles cut on each of the sections of the tuning cap, but I don't know if that's done with the common plastic dielectric tuning cap. I imagine anything beside a constant radius profile would put a radial stress on the dielectric film, which might be a problem. But I don't know for sure. It's been years since I've taken one of those things apart, and I don't remember the profile of the plate.

I've aligned a few radios and I haven't noticed much consistant problems with the factory alignments, but I don't get real fussy about oscillator - RF tracking. Getting the best dial tracking is more important to me. I figure getting it right somewhere near the high end and low end is about as good as it gets. Getting it perfect at the extremes would just knock it off more somewhere else.

I suspect that in the battle for listeners coming up that one of them will dominate and ultimately overpower the other. There isn't a difference in technical quality between XM and Sirius that there was between AM and FM to force a transition. The winner if there is one will be decided by the audience share gotten by having the right mix of programming. And some of that programming is proving to be quite expensive, so the investors are going to want to see a profit sometime soon. I think it will be a bruising fight, but I may be way off base too.

But it could also end up that XM and Sirius are just two more buttons on a signal processor right along side AM, FM, Ipod, CD and maybe digital FM.

It will be interesting.

It appears that the infection is limited as noted below. Also, from the Microsoft site: As with all currently known variants of the Mywife malware, this variant does not make use of a security vulnerability, but is dependent on the user opening an infected file attachment.

Researchers Warn of File-Destroying Worm

By ANICK JESDANUN

NEW YORK (AP) - If you have computer files you'd rather not lose, now is a good time to make sure your anti-virus software is up to date. A worm set to activate Friday will corrupt documents using the most common file types, including ``.doc,'' ``.pdf,'' and ``.zip.''

Hundreds of thousands of machines are believed to be infected, mostly in India, Peru, Turkey and Italy, said Mikko Hypponen, chief research officer for Finnish security company F-Secure Corp.

The worm, known as ``CME-24,'' ``BlackWorm,'' ``Mywife.E'' or a number of other monikers, even tries to disable anti-virus software that is out of date, he said.

Thus, users should make sure their software is turned on and has the latest definitions, generally available for free from the software vendor's Web site. F-Secure also has created a free removal tool.

``If you are infected, and you find out about it today, you still have time to get rid of the virus,'' Hypponen said.

As worms go, the spread of BlackWorm is relatively low. But worms these days are generally designed to help spammers and hackers carry out attacks, not to destroy files as this one does. So the impact this time may be more severe.

Microsoft Corp. issued an advisory Tuesday warning customers about the worm, which affects most versions of its Windows operating system.

Users should be safe if they have the latest anti-virus software or if their computers are set with limited privileges, a common setting in larger organizations. They are vulnerable if they, like many small business and home users, leave their computers set with full administrative rights.

And users should check the date on the computer. The worm hits the third of every month, so if the computer's local calendar settings are off, Hypponen said, files may be destroyed sooner or later, even if the computer is never turned on Friday.

203. WJ-8716 review - initial impressions

Newsgroup: rec.radio.shortwave
Date: 2006-02-02 17:21:03 UTC
From: shoppa@trailing-edge.com
Message-ID: <1138900863.272378.135120@g47g2000cwa.googlegroups.com>
Source record: 60605

OK, folks, I took the plunge and bought a "AS-IS but not DOA"
Watkins-Johnson WJ-8716 on E-bay.

For those who haven't used or seen them before, this is not a SW
portable. This is not a SW tabletop. This is a rack-mount receiver sold
in the 80's to the military, certain 3-letter agencies, certain
laboratory environments, etc. My particular unit has the GPIB
interface, the Preselector, ISB, and the regular (not microprocessor)
front panel.

The seller wasn't particularly communicative nor awfully quick to ship,
but after a week it got sent via UPS and arrived safely. Packing job
wasn't stellar but it was good enough (and after all these things are
pretty sturdy).

Just for a base of comparison: I've owned many SW receivers over the
years. My first was a Knight-Kit Space Spanner. Since then I've had an
assortment of ham and SW equipment - if you can name a brand, model, or
seller, I probably had at least some contact. Usually I stay away from
the newest and shiniest stuff, and in the past couple years my main
pieces of equipment were some R-390A's and the associated
electromechanical maintenance. I was very happy with the R-390A's as AM
and CW receivers, but they predate modern SSB stuff and the lack of a
product detector was a sore point. R-390A's are also a true joy to work
on - modular construction, nice big glowing tubes, a geartrain and cams
up the wazoo, the works!

But I made the plunge and got the WJ-8716 anyway. Even though it is
"digital", it's not newfangled digital, it's 20 years oldI unboxed it,
plugged it in, and it worked.

Then (of course) I took off the cover. The microprocessor board had a
good amount of damage from a NiCad battery that had leaked all over it.
I pried off the battery, put it in an acid bath to neutralize the gunk
that had leaked from the battery, scrubbed off some/most of the
corrosion, rinsed it and let it dry off. Well, it had 10 years worth
of damage from the gunk probably (the radio is 20 years old and I'm
guessing the leakage started a decade ago) but at least that damage had
been stopped from continuing.

Now I get to play with the radio hooked up to an antenna. WOW. This is
amazing. It's got 5 filters (300 khz, 1 khz, 3.2kHz, 6kHz, and 16kHZ).
The filters have the sharpest edges I've ever heard, and I've used a
lot of ham and communications receivers over the years. If there's a
hetrodyne, I just shift the center frequency or put on a narrower
filter and that hetrodyne is GONE. Maybe every other crystal filter

I've ever heard before is crap, but I doubt it, most of them are pretty good but they don't make a hetrodyne that's 9 S-units above the desired signal and a couple hundred Hz away disappear like that!

It doesn't officially have passband tuning in the modern sense but it's got a dial-in BFO offset and the different filter widths, and between the two I do just fine. Those who have used modern receivers without BFO knobs will probably have to learn the skill. My one caveat: I do not particularly like the thumbwheel BFO setting. I much prefer knobs.

Now, the tuning: My wrists are rather strong after prolonged usage of the R-390A's :-), but the WJ's big tuning knob works just like I'd want, smooth and precise with a nice spinner. The tuning steps are adjustable from 10kHz down to 10Hz, and I might've chosen different step sizes (on the SW bands a 5kHz step would've been nice) but they're workable.

Compared to any modern digital-display receiver, there are no bells and whistles. No memories, no bands, no scanning, no nothin'. That's fine by me, but others will miss their bells and whistles.

Internal modularization and construction is simply superb. No other way to describe it. Everything comes out on BNC's on the back, even the audio.

I'm guessing that this receiver must have a OCXO or at least a TCXO in its master oscillator, because frequency display is spot on from top to bottom, from turn on with zero observable drift during warm-up.

Reception on USB and LSB is superb. A couple spot checks of RTTY and utility frequencies, as well as tuning around the ham bands, were wonderfully simple and spot-on.

No synchronous AM detector, which some may miss. I have some but not very much experience with synchronous detectors, so I don't really miss them. I do occasionally hit the "USB" or "LSB" button when there is interfence to one side or the other, and that works

Audio quality is also excellent. I use a little outboard amplifier and some RatShack Minimus-7's. This is also a very quiet receiver - no hiss or hum at all. (My ears are particulary picky about hiss).

The receiver is also very well shielded and the preselector seems to do its job very well. I have a sizable AM broadcaster in my backyard and most consumer receivers have intermods and images of it showing up everywhere across the spectrum. My R-390A did a lot better but if I knew where to look I could find the images (although weaker). On the WJ-8716, no images anywhere. And I know where to look.

And as far as shielding, if I unhook the antenna then all the signals go away. Even that AM broadcaster in my backyard, which is strong enough that I'm sure some could pick it up on their dental fillings.

Still to explore: LW reception (I don't think it really goes down to DC but it basically goes there). It does a superb job on 160M ham band and on the AM broadcast band, though, so I suspect it'll do fine. And maybe I'll play with the GPIB computer interface someday.

Tim.

It's true that NPR, like much of the media, is bending over
(backwards?...nah...just bending over...) to appear ''fair and
balanced''. This is based on the flawed premise that there's 2 sides
to the truth.

Further proof that we are screwed.

I believe in the World Service, but even they fall prey to Bush World
paranoia.

I would agree, the AOR would probably be better, but I myself couldn't
stand to use one as a main receiver. I tried and tried to get used to a
friend's, and it annoyed me no end. And I like gadgets.

Now the 545 I could live with, no problem. JRC has "feel" and ergonomics
pretty much down..

And Free Radio requires listening to 20 mins of commercials, yammering djs and stale playlists. There is a reason people are willing to pay for the service. Its simply better and worth the $0.40 or so cents a day.

I use crystal filters designed for the Racal 6790 in my AOR 7030+. The shape factor is 1.33.

Typically, filters with a shape factor of below 2 are considered "pretty good", and Kiwa is proud of offering premium filters for my radio with a shape factor of 1.65.

The true left is Radio Pacifica. I do ocassionally listen to it. If you get a chance, please do so (I'm guessing that it must be available over the web if not a local station to you.)

The true right is the John Birch Society.

The "republican right wing" has just a tiny bit in common with the John Birch Society. Less now than say in the Reagan years.

Tim.

I have no personal experience with the 545 - but a concern I've heard
from many is the audio quality of JRCs in general just isn't very good.

The stock filters that come with the AOR aren't impressive to me - they
seemed to be too wide or too narrow. But they're 455khz filters, so
it's easy to find better replacements.

The 7030+ is the quietest consumer radio I've ever had. It has plenty
of dynamic range. It's also reasonably practical to run it on NIMH
batteries.

150 channels and nothin' on...believe me, I've head about this phenomenon. The first step should just be to cancel your subscription. If you don't want to listen to all of that crap, you shouldn't be paying for it. And if you ever decide in the future that you do want to listen to it, odds are you can get it for less (if not for free) via the internet. So, that's one fewer check you'll have to write every month!

So, you make due paying a subscription every month for material you could get over the internet or the airwaves for free? How ignorant.

But don't worry. As podcasting and other cheaper, more efficient, more reliable, more economically viable and generally superior online technologies mature, satellite radio will disappear faster than a fart in a windstorm.

I heard (somewhere) a very convincing program which was demonstrating
that NPR isn't really liberal, that if liberal, it is to the extreme
right of that category. Not that it necessarily started out that way.
I believe the program was based on an analysis of the amount of time
given right or near right spokesmen versus the amount of time (and
number) of left/liberal commentary. The left has gone right, and the
true left is off the mainstream map.

254. Re: JRC NRD 545 DSP or AOR AR7030+

Newsgroup: rec.radio.shortwave
Date: 2006-02-02 21:07:02 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1138914422.029173.64610@g14g2000cwa.googlegroups.com>
Source record: 60506

Dear Alan,

I cannot offer my own personal comments about the JRC NRD-545. I did not buy one because of the relatively mediocre review it gets in PASSPORT TO WORLD BAND RADIO. Among other things, several of its facilities are not available in all operating modes - for example (quoting PASSPORT 2006): "No AGC adjustment in AM mode or with synchronous selectable sideband, and lone AGC rate too fast." Not to be able to make such a necessary adjustment is poor design, in my opinion. (Just TRY listening to faint DX with an AGC that's too fast!) There are a number of other disadvantages which are unacceptable to me in a receiver of this category and price.

Therefore, I purchased an AOR AR7030 Plus with the NF/NB option and a few other options as well (most notably the 2.4 kHz crystal filter replacing the stock ceramic 2.4 kHz one). With this radio, all facilities are avaiable in all modes and are all fully adjustable by the user. I have been extremely pleased with the performance of this receiver as well as its construction quality. Frankly, for me, it leaves absolutely nothing to be desired (except, perhaps, for a broadcast FM section which was originally announced but later abandoned; its audio section is really THAT GOOD enough to warrant an FM section and it's the best sounding MW/SW receiver I have ever heard especially when running the sound through a good stereo system) and I have been a shortwave listener for almost fifty years.

I bought mine from THE SHORTWAVE SHOP. It would be even easier for you to buy from that store as you live in the UK (I live in the US). Their sales and service policies are positively SUPERB in my opinion, much better than any US-based dealer.

Should you decide to buy the AR7030 Plus, I recommend that you telephone Richard Hillier at AOR UK first to discuss your particular requirements. He will make recommendations to you and you can have your set built exactly to your specifications and delivered to the store of your choice.

By the way, I also own the Wellbrook ALA 330S (made in Wales) Active Loop Antenna which works extremely well with the AR7030 Plus. THE SHORTWAVE SHOP is the only retail outlet for it (although you can buy it directly from the factory, but there's no advantage in doing so - the factory does not accept credit cards and THE SHORTWAVE SHOP does).

I wish you the very best of luck regardless of which receiver you choose. You'll never regret the purchase of a receiver of this calibre.

Best,

Joe

P.S. Please note that there are many JRC NRD-545 owners out there who are just as "biased" in their regard for their radio as I am "biased" for mine! Either radio, I am sure, would give you many, many hours of listening pleasure.

>

Well, here in Northern California the three formats I mentioned are the preponderance of AM. There is one all news station, KCBS in San Francisco, which only covers the Bay Area (of course, but useless if you're in Sacramento). There are no oldies stations left on AM. There used to be a big band station in Sacramento (KCTC, 1320) but they dumped their format after determining that their listeners were all dead. (They went to Air America, which probably caused some heart attacks among the remaining members of the greatest generation.) Most stations that advertise as being "oldies" in fact play a lot of hippie rock and 70s stuff, not Elvis era stuff. AM simply isn't commercially viable outside of a narrow range of listeners. Preachers like AM because it's cheap, for the same reason that most domestic SW in the US is religious (and a lot in Latin America too). Minority communities like AM because they can serve their communities easily and cheaply. The rest of the stations fight to survive by loading up on ranting Rushes.

I'd suggest getting the filter daughterboard for the 7030+. You can add
two extra filters without removing any filters from the motherboard.
Javiation installed the filter board and one of the crystal filters,
and still came out as the lowest price. I don't know if you get that
kind of service today, but it wouldn't hurt to ask.

I use the notch filter in the NB option quite often. I can't say I use
the noise blanker itself very much.

Western Union became the first American telecommunications corporation
to maintain its own fleet of geosynchronous communication satellites,
starting in 1974. The fleet of satellites, called Westar, carried
communications within the Western Union company for telegram and
mailgram message data to Western Union bureaus nationwide. It also
handled traffic for its Telex and TWX (Telex II) services. The Westar
satellites' transponders were also leased by other companies for
relaying video, voice, data, and facsimile(fax) transmissions.

Western Union was very involved in the Automatic Digital Network or
AUTODIN program. AUTODIN, a military communication application for the
military was first developed in the 1960s and became the precursor to
the modern internet in the 1990s. The Defense Message System or DMS
replaced AUTODIN in 2000.

284. AIR 11620 kHz; Shortwave in the car

Newsgroup: rec.radio.shortwave
Date: 2006-02-02 23:51:11 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1138924271.430330.48760@g47g2000cwa.googlegroups.com>
Source record: 60536

I remember back in the day when listening to AIR on 11620 kHz could be quite a pain.... You know, back when there was horrendous teletype interference some 2 or 3 kHz up?

I recently re-installed my Sony XR-4950X car stereo w/shortwave tuner. I knew that AIR had been putting out a pretty clear afternoon (EST) signal these days on 11620 kHz (w/a nice 500 kW); but I was quite surprised to find that I could so clearly pick up the English service of AIR in the car around 1830 UTC or so. Overall, a very strong signal and very listenable right there in the car, while driving in moderate urban traffic. Problem with this Sony car stereo tuner is that the scan function only stops on the very very very strong stations, and manual tuning is a pain, since it requires holding the tuning buttons down and that sorta thing.

What kind of acid bath stuff did you dip the corrosion part of the radio into? You didn't dip the whole radio in there,did you? I once found a can of CRC-222 in a scrap metal/junk yard.The spray can only had a little bit of CRC-222 stuff in the can.That CRC-222 was amazing at getting rid of battery corrosion.I can't find it in any of the stores around here,I even checked with the industrial supply stores around here,they dont sell it.I have a tube of stuff here that is suppose to be good at preventing corossion.It says on the tube,CONTAX.Blackburn 1525 Woodson Road St.Louis,Missouri.OXI E.Inhibiting Compound.Protects all electrical connections.Cat No CTB.Instructions.Wire brush the bare connector or abrade with emery cloth.This may be done through a coating of Contax or immediately before applying Contax.Apply a liberal coating of Contax to both the cleanest connector and contactor and surfaces of the contactor.Insert conductors into connector and secure per manufacturer's instructions.Wipe off any ecess Contax compound.CAUTION: Do not abrade plated surfaces of connectors.

I guess it's good stuff,I found it in a scrap metal/junk yard about twenty years ago.

I meant NEWS coverage. Traffic reports rarely touch on conditions on
Central Valley freeways. Weather mostly covers SF and San Jose. News
items focus on SF. KCBS is groundwave for the
Sacramento-Stockton-Modesto region, meaning that it can be easily
received in the daytime here, so you'd think they could widen their
focus a bit.

Not all the music made in the 60s was done by geniuses. Hendrix, Morrison and Joplin had talent, sure (not to mention Santana, who's still playing) but a lot of the stuff is remembered by absolutely nobody, not even the classic rock stations. The 60s are OVER, David, get used to it.

Anybody remember the fuss over PGP (Pretty Good Privacy), a freeware encryption program that came out in the early days of the public internet? The feds HATED it because they were afraid that high grade encryption would fall into the hands of our enemies. It never caught on, and the NSA likely cracked the code, so they stopped making a fuss about it and now nobody remembers it.

Besides, the vast majority of talk radio is considered entertainment. It's not considered news in any form. Even with the loose definition of "news" used by American media, it's not considered news. This provides a convenient smokescreen for the gabbers-every time somebody takes them a little too seriously, they say "hey, we're legally entertainment, we're not providing an actual news program, people should know that". That ignores the fact that many people get their information almost exclusively from talk radio. People think they're speaking the gospel truth, when in fact they can lie more than the current president under the cover of being entertainers. Every time somebody points out lies or errors in some pundit's crap, be he conservative or liberal (think Michael Moore), said pundit always pulls out his big ENTERTAINER shield and claims that he doesn't have to be held to the same standard as the nightly news.

You HAVE been a professor for too long. "Geniuses" is the accepted usage in American English. Hardly anybody who isn't an anal retentive English professor (which you may be) uses "genii", although since "genius" is indeed from Latin that would be technically correct. To the average American, a genii is a magic person in a bottle who grants you three wishes. Oh, and it was nice that you didn't tackle the meat of my post, but instead made an issue over Latin vs English.

Totally immune? Mac does have antivirus products, I'm sure they're not
just window dressing.

Perhaps you missed the massive amounts of updates and fixes that Apple
has bestowed upon their customers since OS X came about. At one point
it was upwards of several a day.

Let's not forget that Macs also represent a very small percentage of
the global PC market. Sure, this is mostly by Apple's dim view of
third party innovation of their product, but it's still a problem.

Also, There's a certain pretention stench about Mac owners that makes
me hide and sometimes regret the fact that I own a Powerbook. Your
post definitely has clouds of that stench over it.

I'm not saying Mac is better than Windows or vice versa. I am,
however, saying that there are bound to be bugs in any large scale
product and there will be people there to exploit them. Since there's
fewer Mac customers than Windows, Windows customers make for a great
target.

Martyn's close enough to a couple of major cities
(Cincinnati, Lexington, Louisville) that if he scans
for estate sales online (like you can with the
Cincinnati Enquirer), he can target sales that might
yield results with a minimum of drive time.

What do y'all call people who live in Mountain areas? Mountainbillies? There is a big stereotype about Hillbillies,a stereotype that sure does have a lot of people fooled Big Time! They are no different from anybody else.Not enough hills,or big enough hills,here in Mississippi to be considered Hillbillies.From in front of my house,the street begins to go uphill,about six or seven feet high to the top,I think.I guess that means I am a Hillbillie,eh? The side of the street I live on is about four to five feet higher up than the other side of the street I live on.Does that mean I am a Hillbillie? It does NOT!

From: nbates1@webtv.net
Message-ID: <4285-43E2F2BC-1417@storefull-3211.bay.webtv.net>
Source record: 60723

Hi,
I havent had a shortwave in probably 25 years, and am thinking about getting another one. The one I had back in the day was a Rhapsody, one of those larger tabletop models with the swivel "directional" antenna on top of it. Probably $50 or so back in the early 1980's.
It did, as far as I know, a decent job. I enjoyed listening to the propaganda from the old Soviet Union.
I see radios now ranging from $10 to whatever you care to spend. It looks like most of the folks in here have high end radios, but Im planning on staying under $100.00 as that should cover a radio that will provide some "casual" listening. That, and funds are limited, and I do like to have several interests covered and not all my money tied up in one activity.
I do read reviews and such on the net, but I always prefer to hear personal experiences from actual users.
About the only features Id require on a cheap radio is an external antenna jack (I think many el-cheapos lack this), and a digital tuner, as Ive always found sliderules to be inaccurate on most any kind of radio.
Any recs or warnings?
Thanks,
Nathan

Hello,

I used to "mess" around with Shortwave during my younger years. I made a couple of crystal radios and picked up signals and such.

I am wanting to develope a more mature hobby. I need information as to the best entry level equipment, current interferance woes, maybe wiring diagrams for receivers and information on gianing a license.

I have really become disheartened by all the garbage on the radio and satelite radio doesnt really attract me anymore and have a bit of nostalgia hearing transmitions from around the world in the monourial, tubed, warmth.

Anyways, let me know all the information you have.

Thanks!

330. WRN'S DRM SERVICES GO LIVE (http://www.w4uvh.net/dxlatest.txt)

Newsgroup: rec.radio.shortwave
Date: 2006-02-03 10:03:28 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <drve3t$55q$1@gnus01.u.washington.edu>

WRN'S DRM SERVICES GO LIVE

Press release Issued by WRN London, 30th January 2006

WRN, the London-based international transmission service company, today announces the launch of its two Digital Radio Mondiale (DRM) services. DRM is the digital radio transmission standard for Long, Medium and Short Wave.

The first service is a London-wide 24 hour a day DRM trial broadcast at 26 MHz. The second service offers DRM transmissions that can target any major European radio market via directional antennas. Initially this second service will cover the whole of the UK and Ireland. Both services go live on Monday 6th February with programming from a range of respected international and UK radio broadcasters.

Gary Edgerton, WRN's Managing Director, says, "DRM will revitalise AM, LW and Short Wave broadcasting because the next generation of digital radio receivers will contain chip sets that receive both DRM and DAB signals, providing the listener with an exciting choice of domestic and international stations. WRN's DRM services offer stations currently using analogue AM and Short Wave the opportunity to join the digital radio revolution. We also welcome stations who want to test this new transmission technology and stay ahead of their competitors."

26 MHz for London

WRN's test and development trial for London will assess the potential coverage of DRM transmissions at 26 MHz. It will generate important data about the penetration of the signals into various types of building and other urban situations as well as gauge audience reaction to the broadcasts.

The transmission site is the world famous Croydon broadcast tower, situated in South London and operated by Arqiva, WRN's DRM transmission partner for this project. Arqiva provides transmission services for most UK commercial radio stations. Croatia's RIZ-Transmitters has supplied the Yagi antenna and transmitter for the duration of the project.

Regional DRM Service

WRN's regional DRM service offers broadcasters comprehensive coverage of the UK at 50 kW Average DRM Power. WRN will eventually offer services that can cover Europe using DRM sky-wave transmission and directional antennas that will reach specific European radio markets with frequencies that provide higher reliability in urban areas from

the transmitter site located in Bulgaria. Telefunken has supplied the modulator and exciter for the service.

WRN will encode both DRM services at its central London headquarters, providing the flexibility to generate a pre-mixed DRM stream that will then be fed to the respective transmitter sites. WRN will also add data for receiver display utilising custom created software. -Ends-

VT COMMUNICATIONS FURTHER ENHANCES DIGITAL CAPABILITY

VT Communications is to add a new Digital Radio MondialeTM (DRMTM) compatible transmitter to its AM digital distribution network as it continues to demonstrate its commitment to DRM and the roll out of digital services.

The new 500 kW HF (short wave) transmitter will be manufactured and supplied by Radio Industry Zagreb (RIZ) in Croatia and is in addition to the recently purchased 100 watt transmitter which will provide local DRM coverage within the London area. These significant investments are part of VT Communications' strategy to offer customers an international digital transmission capability.

The latest transmitter will be installed at VT Communications' transmission facility in Shropshire, UK and will be primarily used to provide extensive HF coverage in Europe. The additional capacity that this transmitter provides on the DRM platform will allow broadcasters around the world to experience the benefits of digital AM technology and develop their digital services.

Bryan Coombes, General Manager of Broadcast at VT Communications commented: ``VT Communications has established itself as an active supporter of new broadcast technologies and we have been championing DRM for several years now. Last year we hosted a live, nationwide, DRM pilot service into the United Kingdom, which proved to be an unqualified success for the participating broadcasters. VT Communications ongoing investment in DRM-capable infrastructure shows a commitment and determination to make the benefits of digital broadcasting available to our customers.``

NOTES TO EDITORS

About VT Communications

VT Communications is a leading provider of specialist communications services at the forefront of new technology, providing innovative totally managed end to end solutions and systems integration in over 100 countries from 29 locations to customers in the broadcast, defence and government sectors worldwide. VT Communications transmits over 1,000 hours of both short and medium wave broadcasts every day utilising its global network providing broadcasters with exceptional coverage of the world`s most populous regions. Broadcast customers include BBC World Service, NHK (Radio Japan), Radio Canada

International, Radio Netherlands, Australian Broadcasting Corporation (ABC) and Voice of America. VT Communications is a founder member of Digital Radio Mondiale (DRM), a consortium of broadcast related organisations working to bring digital radio to the market place.

About DRM

DRM revitalises radio with clear, FM like audio quality and excellent reception, free from static fading and interference. While DRM currently covers short wave, medium wave/AM and long wave, the DRM consortium recently voted to begin the process of extending its system into the broadcasting bands up to 120 MHz. This will enhance the range of non proprietary, digital radio solutions offered worldwide by the DRM consortium and the World DAB Forum, which work together on projects of mutual interest. DRM`s European commercial launch took place in September 2005.

Kodak stop bath, which is acetic acid with an indicator. Pretty much
the same stuff as vinegar (maybe a little less flavor!)

> You didn't dip the whole radio in there,did you?

The damage was limited to the board that had the battery, plus just a
little bit of crud on the edge connector (not actually on the contact
part.)

Adjacent boards didn't show any damage.

This would be the better choice for listening to broadcasts. The
Sync detector makes a big difference. In the U.K. it may not, my experience
here in Israel is the European SWBC stations pin the S meter or don't
show up at all. The long periods of fading in and out that I heard in
the U.S. don't seem to exist here.

> Target HF3

No idea.

> Trio / Kenwood Communications Receiver. Model R2000

Great radio, no sync detector but you can fake it with ECSS (tuning
an AM station in SSB mode). This requires a really stable receiver.

Much better at receving hams and utility stations. 90% of ham voice
traffic is in SSB (LSB below 9mHz except for 5mHz, USB above), and
99% of utillity traffic is in USB.

Good luck.

Geoff.

At
http://www.aussieseek.com

Gortons and Whaling
by Greenpeace 4:40pm Fri Feb 3 '06 (Modified on 7:19pm Fri Feb 3 '06)
article#64873

Greenpeace, along with Environmental Investigation Agency (EIA) and the Humane Society, revealed the link between the whaling in the Southern Ocean and Gortons. We revealed that the Japanese parent company that wholly owns Gortons, Nippon Suissan, also partly owns the whaling fleet whose boats depart every year to hunt whales in Antarctica.

Gortons and Whaling Today

This year the Japanese whaling fleet plans to take 935 Minke whales and 50 each of the endangered fin and humpback whales. Greenpeace is opposed to this senseless slaughter and is asking Gortons and Nissui to use their influence over the whaling fleet to end the hunting.
What links Gortons and Whaling?

As the diagram shows Gortons is a wholly owned subsidiary of Nippon Suisan Kaisha. Nippon Suisan Kaisha also holds 30% of a company called Kodo Senpaku, which owns the Japanese Whaling Fleet. It is important to realise that there is only one Japanese whaling fleet, the fleet is not one of many, or part of a large industry, it is the single commercial whaling fleet hunting in the Southern oceans and if we can stop it, the whales will be saved. It's as easy as that.

Gortons and Whaling, The Future

It is our hope that the management of Gortons can put pressure on Nissui Suissan Kaisha, and that they in turn will put pressure on the whalers, Kodo Senpaku, convincing them to put the fleet to better uses.
What might those better uses be?

Well we know that whale watching has proved a lucrative industry in many parts of the world, far more profitable than the loss-making business of killing whales, freezing the meat and failing to sell it. We'd suggest that the whaling fleet devote itself to educating tourists about whales, because as we and the whales know only too well, there's no-one as good at spotting whales as the whaling fleet.
What can you do about Gortons and Whaling?

In the mean time you can help us. You can write to Gortons about whaling, and ask them to live up to their reputation as a caring and responsible family firm,and put pressure on their owners and the whalers to change their business.

If you have a website or weblog you could also add this banner to your site to help us spread the word about Gortons and Whaling. Just enter the HTML below into your site to display the banner.

339. BPL and power-line noise (was Re: IBOC, place to complain)

Newsgroup: rec.radio.shortwave
Date: 2006-02-03 13:06:32 UTC
From: w1rfi@arrl.org
Message-ID: <1138971992.502301.138160@g49g2000cwa.googlegroups.com>
Source record: 60741

HFguy wrote:

> Are those two people open to hearing about BPL interference to
> international shortwave broadcasting?

Most interference to international shortwave broadcasting is reportable and, in theory, enforceable.

Broadband Over Power Line, both access and in-premise BPL, can and does cause interference to HF and low-VHF reception. There are several types of BPL, and each has its own unique characteristics, but all types of BPL have some characteristics that help identify it.

o The most important factor to diagnosing BPL is to determine that it is in operation in your area. The FCC mandates that the BPL industry maintain a database of BPL locations and contact information. See http://www.bpldatabase.org. Don't do too many searches, though, as each search after your first slows the site way down. If you have any complaints about the BPL database, contact the FCC about them. ARRL also maintains a BPL database page at http://p1k.arrl.org/~ehare/bpl/ex2.html. It contains information from a much broader range of sources, and has much added value such as hyperlinks to interference reports, etc. Contact W1RFI@arrl.org for any comments or questions about the ARRL's BPL pages.

o BPL occupies a significant swath of spectrum. If you were hearing a narrowband noise, perhaps across 30 kHz of a SW band, or noise spaced every 30 kHz across a wide range, this is not BPL. It fully fills any spectrum it occupies.

o BPL can consist of close-spaced, usually digitally modulated carriers, typically every 1.1 kHz, or it can sound like broadband noise. If noise you hear has a strong 120-Hz component to it, it is still related to power lines or electrical devices, but it is not BPL.

o In its use of spectrum, the onset of BPL vs spectrum is rather abrupt. For example, you could be tuning up the bands, and at 4 MHz, the band is clear, but by 4.1 MHz, the noise has increased dramatically, and stays that way over a few MHz (typically), then disappears in the same way farther up the band. It's not uncommon for BPL to occupy several blocks of spectrum over tens of MHz.

If your location and noise match the above, you will probably also see BPL equipment on your power lines. Look for new boxes and new BPL couplers on the lines near your house. The ex2.html site listed above has links to pictures in a number of the entries, as does the ARRL BPL resource page at http://www.arrl.org/bpl.

If you do have BPL intereference, most of the procedures outlined in http://p1k.arrl.org/~ehare/bpl/complaints.html also apply to filing complaints about the reception of international shortwave broadcast. Unfortunately, although administrations are required to write regulations to protect the reception of broadcasts from other countries, the reception of shortwave broadcasts within the US probably doesn't enjoy such protection. Most SWLs probably listen to more than just the US religious stations, so if you do have SW interference, focus your complaint toward the international stations. The US stations could be interested in receiving your reports, though, as they may at some point want to speak out about international concerns about BPL.

Your ability to listen to Amateur Radio stations should also be protected, as is the reception of WWV, etc. Unfortunately, you probably cannot claim harmful interference to the reception of utility stations that are not intended for reception by the general public.

Your initial complaint about BPL should be sent to the operator of the BPL system. In many cases, you won't know whether this is your electric company, or a separate ISP, so the most certain way is to start with your electric company. Send informational cc's to the FCC addressess listed in the complaints.html URL.

In all cases of interference, it is generally important to identify it correctly. Although power-line noise can also cause interference, and it, too, should be reported to your electic utility company and FCC, it should not be confused with BPL. Every little burst of noise that may occur for a few seconds, or every single computer "birdie" is not necessarily harmful interference as defined by the rules, but "legal limit" broadband signals will be S9 or greater across tens of MHz, typically over a large geographical area.

Although ARRL's cooperative program with the FCC is specifically focused on Amateur Radio, the information on ARRL's web page about power-line interference may also help the SWL better understand power-line noise and know how to proceed with complaints. Those complaints should be directed to the FCC Call Center in Gettysburg, PA. See http://www.arrl.org/tis/info/rfi-elec.html.

Interference from other devices can also affect radiocommunications. ARRL's general RFI pages at http://www.arrl.org/tis/info/rfigen.html points to a wide range of free information about interference. Inquiries about interference involving Amateur Radio can be directed to rfi@arrl.org. BPL-related questions can be sent to me at W1RFI@arrl.org.

Don't tell me that Gortons has been passing whale meat off as fish sticks all these years.

OK, they are going to take whales this year - so what. The american fishing industry takes huge amounts of fish also - I'm not sure I see the problem.

Remainder snipped.

Actually cuhulin is right on this. The only reason Apple & Mac computers haven't been trageted is they represent such a small portion of the computing world they are uninteresting to hackers. Hackers are just like other terrorists in that they enjoy the notoriety that comes from attacking big visible targets.

If Microsoft-based machines are hobbled the news makes thr fron page, but if Apple machines are hobbled it might make the back page or Style section.

Yes, they are out of the Ebay auction payment business. But brokered
payments are still very much a part of their business: Payments can be
made to all maner of utilities and other businesses; Money can be wired
(paid) directly to individuals; paper Money Orders are used by large
numbers of people. They morphed from communications to money broker
but kept the old name.

That's interesting information, thanks for posting it. I'm not clear as to whether Western Union is still in communication businesses or not. Any idea? The retail payments brokering that WU is known for would seem to be a good fit with their parent company First Data who is a very large payments processing company.

You are short-changing yourself.

Your Mind Is on Vacation

(Mose Allison)

Sitting there yakkin' right in my face
Coming on like you own the place
If silence was golden
You couldn't raise a dime
Cause your mind is on vacation and your mouth is working overtime

You're quoting figures, you're dropping names
You're telling stories, you're playing games
You always laugh when things ain't funny
You try to sound like you don't need money
If talk was criminal, you'd lead a life of crime
Cause your mind is on vacation and your mouth is working overtime

You know that life is short and talk is cheap
Don't make promises that you can't keep
If you don't like the song I'm singing, just grin and bear it
All I can say is if the shoe fits wear it
If you must keep talking please can you make it rhyme
Cause your mind is on vacation and your mouth is working overtime
Cause your mind is on vacation and your mouth is working overtime
Cause your mind is on vacation and your mouth is working overtime

Actually, I am on a linux box at my office, ssh'd to a OS X machine at
home and going thru 2 linux based firewalls to do it (one at each end).

No Windows at home since 1999, nothing wrong with being too safe.

Their frozen fish sticks are dreadful! A thick layer of gooey breading
covers some nondescript tasteless fish product.

Fish and chips properly done can be really tasty comfort food, but it
has to be done fresh It is all but impossible to create a digestible
breaded fish filet that has been frozen for months on end.

As buzzygirl said, the Degen DE1103 is probably the best package of
radio features for the money. Just search on Ebay for DE1103 (don't
include the name Degen) and you will find a couple of reliable sellers.

I got mine from Liypn and had excellent service.
http://search.ebay.com/_W0QQsassZliypnQQhtZ-1

And another reliable seller is tquchina.
http://search.ebay.com/_W0QQsassZtquchinaQQhtZ-1

Finally, this website has a lot of information on the newer portables
including some extensive reviews. There is a review of the DE1103.
http://www.radiointel.com/

If you decide to go with a different radio, just be sure it includes
digital tuning.

Good luck, and be sure to post your final choice.

IMHO IBOC was not a technical decision. The Commission's technical staff answers to the Commissioners, none of whom have a technical background. I think the technical staff has been *ordered* to implement IBOC on both AM and FM stations, and is doing the best they can to comprimise between the technical consequences of doing this, and the employment consequences of not doing it.

In the LPFM proceeding they saw exactly what happens when the technical truth gets in the way of the will of lobbyists.

I don't think any complaint against IBOC will be listened to unless it's accompanied by large campaign contributions. The chances of KE9OA outbidding WOR are pretty much zero.

That said, I think IBOC is going to fail of its own volition. On AM, it'll never sell to the vast majority of stations unless it can be left on all night. But if it *is* left on all night, the massive interference will kill the AM service altogether.

On FM, I think it'll simply never sell. IBOC-FM will fade away, as the digital transmitters suffer inevitable breakdowns & budget-conscious managers decide not to spend money repairing transmitters nobody is listening to.

On the receiver end, set prices will have to pretty much equal those of existing analog sets if they're to compete with satellite. They have a VERY long way to go to reach that point!

Modern transmitters do not ''break down''. They occasionally will
lose an active device, easily remedied by card swapping and FedEx to
the manufacturer.

I suggest (only suggesting) spending a little bit of extra money and buy
a Sony 7600GR radio.I think someone once said Amazon.com sells them at
the lowest price.I bought mine from www.jr.com
I believe you would be much happier with a Sony 7600GR radio.

Yes, deer are pretty much overgrown rodents. Although whales like
other animals have some intelligence I'm not sure what we could learn
from them.

361. Portable or tabletop in this application?

Newsgroup: rec.radio.shortwave
Date: 2006-02-03 15:44:07 UTC
From: "Eric F. Richards" <efricha@dim.com>
Message-ID: <sto6u15j7i1g2d1vb9r6b20k4r7gho8sec@4ax.com>
Source record: 60762

Greetings...

Hate to be all on-topic and such here, given how this newsgroup usually goes, but, whattheheck...

I've decided that I want shortwave in my car. Last time I looked -- a few months ago -- there weren't any adequate in-dash receivers currently made, but I'm willing to do the messy-cable approach and have an external radio available.

Now, the question: Would a tabletop or a portable be more effective? The car has a multiband (HF/V/UHF) HAM antenna on it (no HF rig in the car -- long story!) so I have an antenna that is nominally possible to use with a tabletop, and it is outside, far from the electronic noise of the engine and computers.

OTOH, at first blush a portable would seem obvious for this application, except that it is inside the metal car body, along with the electronic noise from the computers.

Any (intelligent, relevent) thoughts?

Thanks!

In this case, yes ..... but ONLY if an infected Windows machine has write
access to a Mac/Linux machine on the same network.

Note that it is not the Mac that is infected. It is just responding to
a valid delete file request from the infected Windows machine. If the
Windows machine were not on the same network, then the Macs/Linux machines
on the same network would be safe.
```

The problem with using a portable is you can't see the radio controls.
The form factor is wrong. [Knobs all over the place, rather than the
controls on the faceplate.] There are a few DC to daylight scanners
that do have shortwave. Another idea is to get a ham radio that has
continuous coverage. The advantage to using the ham radio is you can
get decent filters for sideband use, something the DC to daylight
radios often lack.

http://www.aoruk.com/ar8600.htm
or something like this (yaesu has a similar model)

BTW, that Bush statement on human-animal hybrids was code-word speaking
to his bible thumper base.

For which the engineer who does the card swapping will charge. As will the manufacturer & FedEx, at least after the transmitter is out of warranty.

A whole lot cheaper than it was in the days where a breakdown meant a few hours with a soldering iron or a few thousand in tubes, but it's still money. Money that won't get spent if no revenue is lost by not spending it.

If tubes and a full-time tech were more cost effective they'd still be
around.

Uses of The 4th Dimension (New Discovery by The Human Race!)

The 4th Dimension is "The next step in Human Evolution".
The Currency of The 4th Dimension is: ENERGY

Note Before: Everything you read on this page is The Truth.
What does this mean?
It means, if you try to do what is written here:
EXAMPLE: "If you just make a wish",
it will be granted in The 4th Dimension
for you to enjoy there.
You have nothing to lose.

Since I discovered The 4th Dimension, one of the conclusions
I have reached is, The 4th Dimension is an infinite access to The
Truth.
Throughout this website, I use the term "I wish" - it is really a way
to voice a person's desire - and from the work I have done - it really
works.

>From the saying: "Ask and you shall receive", I have understood that
any
human being can make an infinity of "wishes" and receive The Truth
(the correct answer) to every question they may have, in the form of a
dream
- that same night.

META-PHYSICISTS CALL THIS TECHNIQUE: "PROGRAMMING YOUR SLEEP".

>From my research, I have also seen that other people have also known
about this dimension and have "kept silent" about it.

They have been conducting activities that I will term "criminal", this
is why I have included a tract for Law Enforcement, so that they
can become aware that this dimension exists and they can use it as a
tool
to acquire The Truth to solve any and all crimes.

Use The 4th Dimension to find your soulmate

This is very easy to do - all you need to know is
The Truth of WHO your soulmate is.

To find your soulmate, do the following:

Say this out loud before you go to sleep:
"I WISH TO KNOW THE TRUTH:
WHO IS MY SOULMATE?"

Go to sleep and you will get The Truth
in the form of a dream that night.

Once you find out The Truth, why waste anymore time?
When you wake up, go find "him" or "her" and be happy.

What if your soulmate is in another country or far away?

No Problem....Use The 4th Dimension to make contact..
that is, use it "like a telephone" or "a chat room".

Here's how...

Once you find out WHO your soulmate is, contact
his/her mind via The 4th Dimension in this way:

Say this out loud before you go to sleep:
"I WISH TO MEET MY SOULMATE."

Go to sleep and you will meet THE MIND of your
soulmate THAT NIGHT in the form of a dream.

What does this mean?

It means you are ACTUALLY SPEAKING MIND - TO - MIND
with your soulmate, so when you wake up in the morning
(that is, your minds re-enter your physical bodies)
you remember your meeting - it really took place!

Keep meeting in this way until you can meet in the physical world.

Use The 4th Dimension to NEVER BE LIED TO AGAIN

This is one of the best benefits of using The 4th Dimension.

You can use it to stop a lie, before it takes root in your mind.

If a lie takes root in a person's mind,
that person is manipulated by that lie and the liar.

Lies also wastes a person's time and energy.

To stop ALL LIES before they take root, do the following:

Say this out loud before you go to sleep:

"I WISH TO KNOW THE TRUTH:
IS [INSERT NAME OF PERSON HERE] LYING TO ME?"

Go to sleep and you will receive The Truth about your question that
night.

This tool is invaluable, because it helps you understand the motive
of anything presented to you in the physical world (3rd Dimension).

Use The 4th Dimension as a "University" [get an education]

You can know and learn anything and everything (no matter how old
you are), your heart desires - FREE - the important thing is
- is that you are learning The Truth abouut any matter
or subject.

You can learn and understand: Physics,
Mathematics, Science, Engineering,
Botany, Medicine, etc

All you have to do is "request The Truth" about a subject -
that is, "make a wish" and you will receive an education on
that subject matter - that night.

To learn any subject matter, you desire to know, say this
out loud before you go to sleep: to sleep:

"I WISH TO KNOW THE TRUTH:
about [INSERT SUBJECT HERE]"

Go to sleep and you will get a lesson, on that subject, that night.

EXAMPLE:

Use this tool to study History.

What better way to study History, than to experience History.

Pick any piece of History and make a wish:

Like so:

"I WISH TO KNOW THE TRUTH
ABOUT THE AMERICAN REVOLUTION."

Go to sleep and you will get a lesson on that point in time.

NOTE: When you study History, you are more like a "witness" of History.

You do not (CANNOT) change the past to affect the present.

Use The 4th Dimension to try (new types of) food

One of the miracles of The 4th Dimension when it comes to food is:
The food actually tastes better than in the physical world (3rd
Dimension)
and you do not gain any (physical) weight.

Use this dimension to eat your favorite foods ("FAT FREE")
or try new and exotic dishes.

To have a "fancy meal" in the 4th Dimension,
say this out loud before you go to sleep:

"I WISH TO EAT:
[INSERT FOOD YOU WOULD LIKE TO EAT HERE]"

Go to sleep and your meal will be served up
in a dream sequence.

Use The 4th Dimension to visit places thought of as "Fiction"

With The 4th Dimension as a tool, places you read in books, actually
have
"a mental state of existence" - that is, they exist and the environment

can be experienced.

Visit the school of "Hogwarts" or the wonderful land of
"Narnia" or even "Middle-Earth".

To visit places you thought "only existed in books or movies"
say this out loud before you go to sleep:

"I WISH TO GO TO [ENTER 'FANTASY LOCATION' YOU WANT TO VISIT]"

Go to sleep and you will be "whisked" to that land to experience (just
respect the locals).

EXAMPLE:

To go to the school of "Hogwarts" do the following:

Say this out loud before you go to sleep:

"I WISH TO GO TO HOGWARTS"

Go to sleep and you will visit that school of magic and fantasy.

Use The 4th Dimension to learn The Martial Arts

True fighting is done in 4D space.

Use The 4th Dimension to learn a discipline of The Martial Arts.

To start your training, do the following:

Say this out loud before you go to sleep:

"I WISH TO LEARN THE TRUTH:
ABOUT [INSERT DISCIPLINE HERE]"

Go to sleep and you will receive a lesson on the art you chose.

EXAMPLES OF MARTIAL ART DISCIPLINES YOU MAY CHOOSE TO REQUEST:
You can learn more than one discipline.

Tai Chi
Kung Fu
Brazilian Jiu Jitsu
Kenpo
Kick Boxing
Karate

Tae Kwon Do
Krav Maga
Jeet Kune Do
Judo
Ninjitsu
Savate

Use The 4th Dimension to practice/train in a Martial Arts DOJO

Just like in the movie "The Matrix", you too can train like Morpheus &
Neo.

To train / practice, please do the following:
Say this out loud before you go to sleep:

"I WISH TO TRAIN IN A DOJO"

Go to sleep an you will appear in a Dojo,
same "rules" as in "The Matrix"

Understand, you do not need to know any martial
arts skills to request a dojo, you can also use a

DOJO as a "mini-gym".

Use The 4th Dimension to travel the world

Have you ever wanted to go to London, Rome,
Amsterdam, Prague, or any city in the world - but never been?
Why wait? You can go there TONIGHT - FREE - via The 4th Dimension.

Just program your sleep and you will experience these
fantastic cities (or any place on earth you desire to visit),
just like a real vacation in the physical world.

To visit any city in the world,
Say this out loud, before you go to sleep:
"I WISH TO GO TO [INSERT NAME OF CITY HERE]"

Go to sleep and you will experience (visit) that city.

Example:

To go to London, just say this before you sleep:
"I WISH TO GO TO LONDON."

Go to sleep and you will experience the city of London.

Use The 4th Dimension to travel the solar system

This universe is big and civilized.
Use The 4th Dimension to visit any planet you choose.

Please follow this link to get started (Space Travel 101)

As you can understand, the most precious time of the
day is really whenever you fall asleep.

That is, you have the opportunity to access The Truth
to know or do anything your heart desires. You just have to
program your sleep and pay attention to your dream time.

Your mind then retains the memory of your research of
The Truth or your adventures in The 4th Dimension.

Try to make at least 1 wish per night.

(*wink*)

If you make a wish and change your mind, just make another one.

It is the last wish you make, before you sleep,
that you pay attention to.

- Sweet Dreams

In Other Words....

One glitch (*wink* - *wink*) I have really discovered that will be of
great interest to all is this:

Anything that costs you money to use in The 3rd Dimension (physical
reality)
you can experience using FREE in The 4th Dimension!

What does this mean?

Ever wanted to drive a Lamborghini? - JUST MAKE A WISH - you (your
mind)
will experience driving a Lamborghini in The 4th Dimension - that
night.

Ever wanted to "get away from it all" and go on a vacation to exotic
locations like: Gstaad, Kenya, or Japan? -
Just "make a wish" and watch your dreams that night.

Save money on college - "request a course" and watch your dreams!

Have fun...

So instead of consulting psychics, Episode hunters merely need to use
the 4th dimension and wish for the location of lost Dr Who episode. Has
anybody told Ian? :)

>Um, not really. There's a reason their still in the sea and we're on land. <

Whales and dolphins started as land animals, then moved seaward. At one point they were similar to what sea lions and seals are now, and before that, bearlike animals.

They went to the sea long before humans were a glimmer in their ancestors' eyes.

You don't need a license to listen to shortwave, you only need a
liscense to transmit as an amateur radio operator. A good entry-level
reciever is a Kaito KA-1101.
(http://www.surpluscomputers.com/store/main.aspx?p=ItemDetail&item=CES10486)
No SSB, though, so broadcast signals only. One interference issue is
Broadband over Power Lines, which makes a huge amount of noise over the
entire shortwave spectrum.

After a couple more days, some more thoughts:

1. Twiddling the BFO thumbwheels is a real PITA. Realistically I'll only have to do this changing from CW to RTTY etc. but still it's a pain.

2. ISB (independent sideband) split left-right in stereo or on headphones is the coolest thing since sliced bread. I've never had this before!

3. Synthesizer noise is not noticable when sitting, but when tuning through a 10kHz boundary there's this annoying click/thump that occurs. It's better than radios which "chuff" while tuning, but it is annoying. (Realize I come from a world of non-digital tuning and I've been annoyed by all synth-based tuners in one way or another.)

4. 3.2 and 6kHz filters still sound incredibly sharp - WOW! I did some side-by-side test comparison with my Ten-Tec Triton on weak-signal CW stuff and while the 0.3 and 1kHz filters are quite acceptable, I think I prefer the Ten-Tec filtering (even though it's not as brick-wall steep). Or maybe it's that good old-fashioned analog knob while tuning on the Ten-Tec. I will have to do more than a couple hours of CW listening to sort this out - I've grown really accustomed to the sound of the Ten-Tec filters maybe, or maybe it's just that the Ten-Tec was built to excel at CW.

5. The hang on the AGC in slow mode seems way too long if I'm tuning around. I know that's how it's supposed to be, but I'm not used to it yet. With my other radios I can set the AGC hang time to be long and don't really notice it while tuning around. Maybe it's a combination of hang time and the tuning rates (again I'm not used to this digital tuning with different step rates concept)

Tim.

I"m sure you've heard of McAfee...the A/V product line originally
created to serve the Macintosh community. Check their database of
active viruses.

Check their product line for OS X current applications. Virex is
specifically for OS X. There's a reason for that.

Now, Mac OS X has never had a successful viral attack in the wild,
but there have been proof of concept viruses for OS X created in the
lab, and the once per month OS X updates, including security updates,
are not for no reason.

You're right that, at least for now, you're safer behind OS X than
anything, including Linux. But that's more related to the active
involvement of the open source community's vigilance, Apple's
commitment, and unattractive market share, than anything else.

Spyware for OS X? Yes. There ain't none. But viruses? Totally immune?

Ain' no such thang, brother.

The K7RA Solar Update

SEATTLE, WA, Feb 3, 2006--Solar activity is very low! Average daily sunspot numbers for the week were down by more than 40 points to 9.1. Average daily solar flux dropped nearly 11 points to 80.6. Geomagnetic conditions, with the exception of January 26, were stable and quiet. On January 26 the interplanetary magnetic field, which can shield Earth from solar wind if it is pointing north, turned south, and the mid-latitudes experienced some moderate geomagnetic activity, with the A index for the day at 15. Polar regions saw a lot more activity, with the College A index in Alaska going to 36.

The sun has been spotless since January 29, and daily readings of zero sunspots could continue for another week. We will observe more and longer periods such as this as we head toward the solar minimum, still expected about to occur about a year from now. Geomagnetic conditions should remain quiet and solar flux at around 77. It may not begin to rise again until February 10.

January is over, so let us examine the average daily solar flux and sunspot numbers for the month compared with previous months. The average daily sunspot
numbers for the months January 2005 through January 2006 were 52, 45.4, 41, 41.5, 65.4,
59.8, 68.7, 65.6, 39.2, 13, 32.2, 62.6 and 26.7. Average daily solar flux for the same months was
102.3, 97.2, 89.9, 85.9, 99.5, 93.7, 96.5, 92.4, 91.9, 76.6, 86.3, 90.8 and 86.6.

As expected, the solar cycle is declining, but there is a lot of variation from month to month.

Richard Buckner wrote regarding last week's mention of the ACE-HF and ACE-HF Pro System
Simulation and Visualization Software for propagation prediction. He says ACE-HF can do
160-meter predictions, but with some limitations. He cites the ACE-HF "Basis for Predictions"
tutorial, written by George Lane:

"160-m frequencies are rounded to 2.0 MHz to conform to VOACAP's lower frequency limit.
VOACAP 2-MHz predictions are reasonably accurate for NVIS and short-range predictions out
to about 1500 km. But when path distances are very long, VOACAP becomes less

accurate at
night. At night, a residual E-layer exists with a MUF usually above 2 MHz. It is this phenomenon
that permits AM broadcasts in the medium-wave bands to propagate thousands of kilometers
during nighttime hours. VOACAP, however, is based on data that was collected at frequencies
of 4 MHz and higher. Extrapolation was used to cover the lower frequencies, but funding
limitations prevented the collection of further data to support those extrapolations. Unfortunately,
computed absorption values are excessive in the extrapolations and the nighttime predictions
thus become excessively attenuated as path distance increases. For this reason, 160-m
nighttime predictions at long path distances should be used with caution."

We heard again from Charles Lewis, S9SS, on Sao Tome--an island off the West African coast,
west of Gabon. On January 20 he wrote:

"I made 150 160-meter contacts last week. 51 were in North America, coast to coast. It was, as
usual, very slow, tedious going. E-mails to me cited large pileups. As usual, I heard no pileup.
Usually, I hear only one, occasionally two, stations cresting my high level noise. Even most 'big
gun' stations only get through when their signal is enhanced greatly by whatever propagation
phenomenon. Even 'little guns' find themselves all alone in the spotlight on my stage now and
then, despite all the better equipped callers. There is no such thing as cracking the pileup on me
on 160 meters, since I never hear it.

"In the Stew Perry [contest], I heard only five NA stations in close to three hours of listening and
worked all five easily. It was interesting that I heard one station on and off for nearly two hours,
while I heard the others only briefly for one period.

"An interesting quirk here is a rogue LU 10-meter beacon that I hear often on the IARU beacon
frequency for hours at a time when the band is so dead that I hear none of the IARU beacons.
Weird!! I favor the W3VD beacon when I am specifically looking for an opening to the USA on 10
meters since, unlike 4U1UN, it transmits continuously on 10 M.

"I used to experience the antipodes enhancement phenomenon on the upper bands often when I
was A22AA in 89-92. I would often work Hawaiian hams (and hear WWVH) when the

bands
were nearly in a blackout condition."

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for January 26 through February 1 were 24, 29, 11, 0, 0, 0 and 0, with a mean
of 9.1. The 10.7 cm flux was 86.9, 83.5, 80, 79.5, 78.8, 77.6, and 77.6, with a mean of 80.6.
Estimated planetary A indices were 29, 8, 6, 3, 1, 2 and 4, with a mean of 7.6. Estimated
mid-latitude A indices were 15, 7, 4, 1, 0, 1 and 3, with a mean of 4.4.

Apple and Macs operating systems can not do anywhere neas as much things that Windows operating systems can do.At least eighty five percent or more of people all over the World use regular computers and Windows operating systems,,, because they can do sooooo much more.I own a few old Apple and Mac computers that I bought dirt cheap a few years ago at the Goodwill store.They do work ok,but I also own some old regular computers with various Windows operating systems in them,I can do much more with them than I can do with Apple and Mac operating systems.I have been thinking about buying a G4 or G5 from www.macresq.com or www.sunrem.com just to play around with.I might do some wired networking too,I have been thinking about it.

Would they have the capability to succesfully launch one rocket with an EMP warhead into the correct orbit to hit anything of importance? (Which is probably more dangerous than actually having the targeting and technology required to accuratly deploy that rocket strategicly.)

Did anyone catch the old U.S. News and World Report where they have a fairly accurate design and wiring diagram for an EMP device? I believe it was 1998-1999 when it came out. I have a copy laying around somewhere. The whole issue was dedicated to 21st century warfare. If it surfaces, I will try to find or post it myself on the web for posterity.

It will follow pretty much the same orbit as ISS, so you can use:

http://spaceflight1.nasa.gov/realdata/tracking/index.html

(Might take a bit of time to load, and right now the ISS is not showing on the map, but they sometimes lose data, and should be back on soon)

I don't think it passes over USA until late at night or very early morning.

See:

http://spaceflight1.nasa.gov/realdata/sightings/

Click on sightings by city over on the left side, or, you can download the other program there.

Read something about it possibly being launched around 4:30 this afternoon (EST).

I believe I read that there was either a 7 or 17 minute delay from deployment to when transmitter comes on.

Passes for SE Michigan... (first that will go over) looks like about 5:39 AM and then 7:12 AM EST on Saturday Feb 4. (Using Orbitron program with Keplerian elements for ISS)

Unfortunately, some guy north of Detroit is running his packet beacon on 145.990.

The position of the detonation in outer space determines its status as
an EMP device.

Assuming you're in the US, buy the "Now You're Talking!" book, study it, do the practice quizzes and take the test. Many amateur radio clubs have Volunteer Exam Coordinators who administer the exam. You can find a directory by searching on your state: http://www.arrl.org/arrlvec/examsearch.phtml . Pass the 35 question, multiple choice exam (which is really very easy). This will get you the first license, the Technician license. No code required for this one, although you're limited to frequencies above 30 MHz.

If you take another 35 question exam and pass a 5 words per minute code test, you will have privileges to transmit on many more frequencies with the General license. The exam is more in-depth than the Technician exam, but still not too hard (IMO).

The Extra license is the highest you can go. You get privileges on all amateur radio frequencies by passing another written exam; this one is 50 questions, still multiple choice, but a lot more in-depth than the previous two exams.

Check out "Where do I Start?" here: http://www.arrl.org/hamradio.html

And you can get "Now You're Talking" from the ARRL or any major bookseller: http://www.arrl.org/catalog/lm/

Enjoy and hope you go for it. Amateur radio's a lot of fun.

Jackie

The FCC is currently in the processof revising the rule to elimate the
code test

so My advice (and it has been my advice for years despite being
Nocoder) is try the code stuff if you show amuch talent for it try it
right out otherwise spend a couple of months exploreing your tech class

I did, they arrived, I hooked them up and after a couple of hours they
were just like my other 15-year old Minimus-7's - the foam surround
crumbled and fell off the driver.

Well, now I have 6 Minimus-7's, 5 with basically zero foam surround
left and one that's just on the verge of falling into pieces.

I gotta learn how to fix these foam surrounds! Either that or buy some
brand new drivers.

As I was idly tuning around Friday afternoon I stopped at a familiar voice and was amazed to hear the mellifluous tones of Chuck Harder. Time: 3:15 pm est; freq 12160 which I think is WWCR. Chuck has been absent for a while as he has been fooling around with Ku-band satellites. He had a guest and the two of them talked about the trade deficit, the Euro's challenge to the American Empire, inflation, declining wages, the national debt, and other cheery topics. WE ARE DOOMED! Unfortunately, I had to go out and don't know if he has returned or was just visiting.Always entertaining if a bit Johnny-One-Note. But what a nice note.

I have an R-75 with all the Kiwa mods.
Here's the scenario:
I'll tune to an international broadcast station on AM.
Then, if I switch to either USB or LSB and tune off the frequency either
way,
I'll hear a whine which gets higher in pitch as I move further away from the
center frequency.
Is this normal?
Can SSB only tune an AM station on it's exact frequency?
Thanks

Tobin-

A couple other ideas:

1. Try your hand at building a crystal set! Just an antenna, a tuned circuit, a diode and earphones. There could be more sophistication such as using an amplified speaker and higher-Q tuned circuits.

2. Try a direct-conversion receiver. It may be just a more sophisticated crystal set with RF preamplifier and on-frequency crystal filter. A product detector could be included to convert to audio, but a diode detector should work and wouldn't change the audio tone frequencies.

I considered using this direct-conversion approach to obtain an accurate 10 MHz signal. I wanted to use it to synchronize my oscilloscope so I could adjust a counter's timebase (or vice-versa). However, I never built it after finding a Rubidium controlled oscillator on eBay.

450. "Ultra" portable MW-SW-FM receiver recommendations?

Newsgroup: rec.radio.shortwave
Date: 2006-02-04 02:57:56 UTC
From: Roger <roger@doesnotexist.com>
Message-ID: <kt58u155ah7p1s0gcriba2e94hnksg2nff@4ax.com>
Source record: 60850
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

I currently own a Radio Shack DX-399 (same model as the Sangean ATS-606), which is a quite solid, portable LW-MW-SW-FM receiver with quite good sound quality when delivered to ear buds (FM stereo to earbuds.)

I mostly use this radio for local MW and FM listening, but will occasionally listen to SW broadcasts, and DX-MW using a Radio Shack loop.

I love this radio for its portability, but am looking for another to put one of them away in a Faraday box for use in case of a major emergency.

So, what other makes/models should I consider? Repeating some of the above, here's my criteria:

1) The size of the DX-399 or smaller.

2) General coverage MW-SW (up to 30 kHz), and with stereo FM (when fed to earbuds). Don't need LW.

3) Good sound quality (especially of FM) when fed to earbuds.

4) As good or better sensitivity than the DX-399 for MW dxing and SW.

5) Don't need SSB, but would be nice.

6) Don't care too much about speaker quality, since I would use it exclusively with earbuds.

7) Don't care about the other bells and whistles (e.g. alarm), but some station memory would be nice.

So what are my other options? New and/or used (buyable through eBay) will be considered.

Thanks!

Roger

Correct. That's why you have Dual PBT. These let you tune away from
dead center without creating beat frequencies.

Tonight (3-Feb-2006) I heard chimes underneath the BBC on 5975 kHz,
like a different (weaker) station was on the same frequency. Didn't
recognize the theme but it sounded vaguely carribean (maybe steel drums
and not chimes, it was the same note repeated three times and then a
step up, repeat.) Any idea what it was?

Is there (on the net maybe) a catalog of the themes that SW
broadcasters use before their broadcasts?

Tim.

Well, that seems about "half right". Yes you can tune in AM with SSB and
it works quite well. And yes if you tune off frequency you will get a
heterodyne from the carrier and the receiver "BFO" (carrier reinsertion)
beating against each other. But when you do that, the sidebands will be
out of tune, so having PBT does nothing to correct that. Stay tuned in
on frequency. PBT is ok to tune out an adjacent channel interferer. Or
of course you can select the opposite sideband.

I hope you are kidding. This is not being broadcast, and has been going on long before Stern's move to sirius. It is posted for download in the usenet newsgroup alt.binaries.howard-stern. People have been making digital rips and posting to the group for years. Some have even edited out commercial breaks. Hence the problem.

Buy a second DX-399 if you can find one. Either that or a Sangean ATS-606. It's clear that you like the radio a great deal, so why mess with a good thing?

I own a DX-399. I bought it when Radio Shack lost its mind and dumped the Radio Shack brand SWRs. I think it is a terrific little radio. Its oddest likable attribute has to be the multiple voltage wall wart. With the included adapter, you can use it in Europe on 220 Vac.

That's called ECSSB or Exaulted Carrier when you tune a AM station with SSB.
That's one of the reasons I love the R-5000. You don't get all that whining
when tuning that way.

Look in your phone book for "speaker repair." The foam disintegrating
happens a lot in dry climates, and if the voice coils aren't too
abraded, they can be replaced by a speaker repair tech.

The voice coils get abraded by using the speaker as the foam is
disintegrating, and they wear against the surrounding magnet and
frame.

I agree on the point of myself having any appreciable effect. I did receive an e-mail response from Mr. Miller of the FCC this morning. He wants me to send him some spectrographs of the stations in question. I am going to see if I can take one of the 8560 spectrum analyzers home for a day or two. This way, I can use the marker function and show the delta between the carrier and the adjacent channel sideband power. The VSA would be even better, because it could measure ACCP (adjacent channel coupled power).
I did get a response from one of the managers from WTMJ 620 this afternoon. Nothing from WBBM yet, but I won't hold my breath on this one.
I do believe that if many people expressed their concern there would be a very small chance that it would have some effect. Unfortunately, money makes the world go around and if the radio stations think IBOC can increase their revenue they will go for it.
I don't think it will succeed.....at least I hope not.

> center frequency.

The "whine" is known as a "heterodyne" or "beat note". There are a couple of ways of explaining it. I'll go with this one:

A regular AM broadcast has three components. There's the "upper sideband", the "lower sideband", and the "carrier".

The upper sideband is essentially the program audio, increased in frequency by the quoted frequency of the station. (so if the station is announcing it's on 11800KHz, the upper sideband is the program audio, with every component increased in frequency by 11800KHz.)

The lower sideband is the mirror image of the upper.

And the carrier is a "dead air" signal *on* the station's quoted frequency. It is necessary for the receiver to retrieve the program audio - the carrier is basically mixed with one or both sidebands to retrieve the audio.

You can hear what happens when the carrier is missing by tuning in a USB or LSB signal with the receiver in AM mode. (during the day there should be plenty of USB signals between 14150-14350KHz, and at night plenty of LSB signals between 3700-4000KHz)

However, that carrier is a big waste of electrical power. (and since the sidebands are mirror images of each other, it's really only necessary to transmit one of them) In "single-sideband mode" the carrier is not transmitted. But since the carrier is necessary for intelligible audio... an "artificial carrier" is introduced in the receiver.

When you switch your receiver back to USB/LSB mode, the carrier is provided, and the USB/LSB signals near 14200 or 3850KHz become intelligible.

When you try to tune an AM signal - that already has a carrier - in USB or LSB mode - you now have *two* carriers. One transmitted by the station, one generated artificially in your receiver.

The two carriers will interfere with each other, generating a "beat frequency" or "heterodyne". And that's the whine you're hearing.

If you had a way of measuring the pitch of the whine, you'd find it was equal to the difference between the frequencies of the carrier transmitted by the station, and that generated in the receiver.

(it might also be equal to the difference between the frequency displayed on your receiver's display, and that announced by the station. However, sometimes software considerations can cause that to not be the case.)

==========

It can be helpful sometimes to use USB/LSB mode for regular AM signals on purpose. Sometimes, "selective fading" causes some frequencies to fade more than others. If this causes the carrier to fade out while the sidebands are still present, you get the same distortion you get listening to a USB signal in AM mode.

By selecting USB (or LSB) mode for a regular AM signal, if the signal's own carrier fades out, your receiver provides a substitute carrier, keeping the signal intelligible.

Also, you can select which sideband to listen to - so if one is suffering from interference and the other isn't, you can choose to listen to the interference-free sideband.

You do (as you've observed) have to be sure the receiver is set *precisely* to the station's transmitting frequency. Sometimes, DXers use this method to measure the frequency of a station believed to be off-channel...

The Winradio G313e by far. No other receiver comes close, not even JRC
NRD, not even AR7030.

The only receiver that comes close is Winradio G303e. I bought the
G313e after using the G303e for almost 2 years and never regretted it.

If you have not heard about them, see the latest WRTH review. Here are
the technical detals:

Don't know too much about the FT-857 but don't get the Yaesu FT-897D.
Its AM tuning options are limited.

The only new portable going with good AM reception is the Icom
IC-7000. It has 3 variable bandwidths for AM and DSP noise reduction,
noise blanker, two notch filters - everything you need for portable
use. It is not cheap - $1500.

Otherwise any of the tabletop sets that run on 12 volts are useable
like the R-75. Drawback to a tabletop - they are large and not easily
secured to the vehicle. Check eham.net reviews to see which noise
blankers and noise reduction sytems are most effective. You will find
eham has many reviews of receivers as well as ham equipment.

Mightily disappointed not to be able to receive signals from the now frozen, inoperative Suitsat. Perhaps if they had painted the suit black to absorb heat from the sun instead of the reflective white that is designed to keep a hot, working astronaut cool the batteries may have lasted longer....

Les

Here is an excerpt from the latest NASA report on the ISS; it describes the failure of the SuitSat.
==========
Report #5=20
11:30 p.m. CST, Friday, Feb. 3, 2006
Mission Control Center, Houston

Space station crew members released a spacesuit-turned-satellite during the second spacewalk of their mission last night. Called SuitSat, it faintly transmitted recorded voices of schoolchildren to amateur radio operators worldwide for a brief period before it ceased sending signals.

Expedition 12 Commander Bill McArthur and Flight Engineer Valery Tokarev ventured outside for a five-hour, 43-minute spacewalk to release SuitSat, conduct preventative maintenance to a cable-cutting device, retrieve experiments
and photograph the station's exterior. Clad in Russian Orlan spacesuits, McArthur and Tokarev opened the hatch to begin the spacewalk at 5:44 p.m. EST. It
was the fourth career spacewalk for McArthur and the second for Tokarev.

After setting up tools and equipment, they positioned the unneeded Orlan spacesuit on a ladder by the station's Pirs airlock hatch. The suit reached the
end of its operational life for spacewalks in August 2004. It was outfitted by
the crew with three batteries, internal sensors and a radio transmitter for this experiment.

The SuitSat provided recorded greetings in six languages to ham radio operators for about two orbits of the Earth before it stopped transmitting,

perhaps
due to its batteries failing in the cold environment of space, according to
amateur radio coordinators affiliated with the station program. The suit
will
enter the atmosphere and burn up in a few weeks. Tokarev pushed the suit
away
toward the aft end of the station as the complex flew 225 miles above the
south central Pacific Ocean. The suit initially drifted away at a rate of
about
a half meter per second, slowly floating out of view below the Zvezda
Service Module and its attached Progress cargo craft. The suit is now
separating
from the station at a rate of about six kilometers every 90 minutes. . .

The correct e-mail address for Paypal orders & email enquiries is:
bdxc@bdxc.org.uk (not as on the original posting - apologies for the error).

----- Original Message -----
The new 2006 (20th) edition of Radio Stations in the United Kingdom is now
available from the British DX Club.

Radio Stations in the UK is a comprehensive 60-page guide to BBC,
commercial, community and low power AM/FM services on MW and FM, with lists
in frequency order and by station name. It includes transmitter power and
site details, plus contact information. Frequencies are cross-referenced to
help you find parallels. It comes with a separate supplement - Radio
Stations in the Republic of Ireland.

Its been two years since the last edition was published, so there are lots
of changes. This new updated edition can now be ordered for immediate
despatch.

Radio Stations in the UK is a must for anyone interested in UK domestic
radio - from the keen mediumwave or FM DXer to the casual listener. Why
not order a second copy to keep in the car - we have a special price for two
copies!

PRICE of the new 20th edition per copy (includes postage):
to UK addresses: - 3 pounds.
to Rest of World - 3.50 GBP, 6 Euros, 8 US dollars or 8 IRCs

**SPECIAL PRICE for 2 copies: UK: 5.50 pounds Europe: 10 Euros **

All orders should be sent to:

British DX Club
10 Hemdean Hill
Caversham
Reading RG4 7SB
UK

UK Cheques/POs payable to British DX Club.
Dollar/Euro payments by cash or Paypal only

E-mail enquiries/paypal payments to bdxc@bdxc.org.uk - please add 5% to
cover Paypal fees.

Full details also on the BDXC-UK web site - www.bdxc.org.uk

Nathan,
Save a few extra bucks, or splurge for a Sony ICF-SW7600GR. It is on sale for $129 at Etronics.com.
It has the best performance/price value currently available. It includes a Sync Detector which is unavailable on ANY radio even remotely near its price class.

You will not be sorry that you splurged.

I was listening this morning from around 1400-1430 UTC on 11690.
Prime Time Shortwave listed it as Radio Jordan.
But I never heard a station ID.
Lotsa rushing background noise, female announcer with a British accent.
The strange thing is that she was playing modern electronic dance music.
Thought that was kinda odd for a Muslim country.
Guess Jordan is pretty progressive.
So, was it Jordan or not?
Thanks,
Lenny

China Eyes Global Communism
http://www.newsmax.com/archives/articles/2006/2/2/115053.shtml

As for Adolf Hitler, it should be noted that he was not given a parliamentary majority by the German voters. In fact, the Social Democrats and the Communists were preparing to form a coalition to govern Germany and freeze the Nazis out, until Josef Stalin ordered the Communists to let Hitler take power in the hope that a pro-Soviet revolution would follow. The only "election" Hitler ever won had one voter, and Stalin was no German.

And so goes Iran & Palestine

WTMJ is certainly a smaller group, and I don't think they have the
financial interest in Ibiquity some of the larger groups have.

I *have* heard reports of IBOC signals splattering out considerably
further than the theory suggests they should. (for example, of "FM"
IBOC stations trashing 2nd and 3rd adjacents - which shouldn't happen)
I can certainly see where problems in the transmission system can cause
that, and since this is a new mode I'd bet a lot of engineers aren't yet
familiar with what can go wrong.

I doubt you'll get any action from a spectrum analyzer plot that shows
all its energy within 15KHz of carrier. However, I wouldn't be
surprised to see some outside that range, and I can see the FCC acting
on that.

> I do believe that if many people expressed their concern there would be a
> very small chance that it would have some effect. Unfortunately, money makes
> the world go around and if the radio stations think IBOC can increase their
> revenue they will go for it.

I think they're grasping at straws, hoping IBOC can stave off
competition from satellite. (much as AM station operators hoped analog
AM stereo could stave off competition from FM)

I just hope it fails quickly enough to not kill off the service entirely.

Jordan, like it's neighbor Israel is pretty westernized. Amman is a
city similar in it's ways to Tel Aviv so hearing techo dance music is
not unusual. When I was is Israel a few years ago I had my SW radio
with me and heard every kind of music imaginable from both Israel and
Jordan.
Very well could have been Radio Jordan. Send them a reception report
and see what happens.

It would be good if IBOC fizzles out sooner than later. In my correspondance
with WTMJ, I did tell them that I can phone them and actually play one of my
radios.....demonstrating that actual level of interference.
We as SWLs are more aware of this type of interference because the receivers
we use are sensitive enough to hear that interference in the first place.
WTMJ's sideband noise is at the 30uV level here in Waukegan Illinois, and
many of the "household" radios that you find in homes aren't going to detect
that low of a level. Exceptions are some of the better auto radios.
It is a shame about that interference but, maybe it won't be forever.

Tong Tong Ting. Tong Tong Ting?

That's the VOA transmitter in Delano, California targeted at Central
America stepping on the tail of the Montsinery (French Guiana?)
transmitter targeted at the Caribean.

Up here in Seattle, it stomps the hell out of 5975 for the last 5-7
minutes of the 02:00 hour, when they warm the transmitter up and then
send the tones. Montsinery has been S9 and Delano us usually 10 dB
stronger. Right off the back of the beam, I guess.

And then at 04:00, 5975 shifts over to Radio Netherlands in Dutch
(from Bonaire, I think) in parallel with 6165.

Message-ID: <2dr9u1tkbs4f6dt00b2hme8va5ogqugg7p@4ax.com>
Source record: 60976

The Failure of Citizenship
a plea for direct action
by Charles Sullivan

The Bush State of the Union address the other evening offered the same mediocrity we have come to expect from this illegitimate regime. It was nothing less than fascism incarnate and it was palpably evil. Consider it a heaping helping of dung soup served on a silver platter. It was cloaked in language to create the illusion of substance and truth. Its message was received by corporate America, by the fat cats on Wall Street, and the congressional millionaires club with applause. The remaining eighty to ninety percent of the populationï¿½those of us left out in the cold and exploitedï¿½listened with disdain and incredulity to the sickening miasma that oozed through our speakers.

As Bush himself has stated, the elite are his political base. That much should be obvious. The wealthy have been handsomely rewarded for their loyalty since the little dictatorï¿½s first inaugural, while the rest of us receive a sadistic back hand to the face. Behind the customary lies and garish displays of nationalism, beyond the euphemisms of empty meanings, lie austere truths that must be brought to the public conscience. One wonders: What planet is this man from? Where is this America described by George Bush?

In Bushï¿½s America, truth has been so distorted, so utterly turned on its head that America is no longer a real place. It is the packaging that contains fascism, skillfully concealing the horrid product withinï¿½George Bushï¿½s Plutocratic America. It is place devoid of real meaning; a cesspool of sorrow and disgrace, the home of a demoralized and timorous majority. It is a place sharply divided by two classesï¿½the predator class and the prey class. Upwards of eighty percent of the population are daily preyed upon by the wealthy minority and they do nothing about it. The ignorant even welcome the rape and contempt with a smile upon their faceï¿½grateful for the chains they wear, glad for the abuse they receive. This is nothing less than a modern form of slavery; it is a true master slave relationship.

Evidence that the rich are fleecing the poor abounds. The cost of insurance for a family of four rose seventy percent during the past six years. The insurance companies and the pharmaceutical industries are reaping enormous windfall profits at the public trough. High premiums combined with high deductibles render the cost of health care unattainable to millions of lower income families. Insurance companies can and do arbitrarily and capriciously drop drug coverage at their sole discretion. The robber barons might as well be holding guns to

our heads.

Bushï¿½s health insurance plan provides additional evidence of criminality coupled with a paucity of ethics. The plan removes every ceiling for limiting the cost of drugs. It provides the pharmaceutical industry carte blanche by prohibiting Medicare from bargaining with drug companies for lower prices. Who benefits? Private insurance companies and the pharmaceutical industryï¿½the very people who write the legislation!

Meanwhile, Exxon-Mobil reported record profits in 2005 of thirty-six billion dollars, even while increasing fuel costs fifteen percent. These are the highest profits ever recorded by a corporation. Venezuelaï¿½s Citgo oil should not be lumped in with the American oil companies that are driven solely by profit motives. Hugo Chavezï¿½s Citgo is offering deep discounts on heating oil to the worldï¿½s poor (I put only Citgo gas in my car). This demonstrates a clear delineation between Capitalism and Socialism. Adding further insult to injury, the oil companies received four billion dollars in tax relief last year. How much did you get?

Despite the baroque words uttered by Bush, his every action speaks contempt for ordinary people living from pay check to pay checkï¿½Hurricane Katrina proved that beyond all doubt. With that familiar sickly smirk on his face, Bush and his ilk are not only stealing our treasure, they are distributing it to the wealthy even as they spit in the face of the poor and the middle class. How could anyone be more openly contemptuous of working class people? Why do we tolerate such abuse and, in so many cases, actually welcome it?

We are witnessing an all pervasive mediocrity in government that has come as a result of a spectacular failure of citizenship. We are a people that value ease and convenience over self education, sacrifice and truth. We do not demand evidence in support of our views. We believe what we are told; and we do what we are told by authority. We do not like to make trouble. Asking questions requires self examining critical thinking, a skill that is rapidly disappearing from our culture of fluff and ease. We want the kind of life where the decisions are made for usï¿½a life that does not place demands upon us. We want to be entertained, not informed by burdensome truths that may assault our conscience and cause psychological injury. That is dangerous knowledge because it would dispel the myths about what America really is. It would force us to think differently about who we are as a people. We would see us as the rest of the world sees us.

George Bushï¿½s Orwellian vision of America did not just happen. It is the result of the influx of enormous sums of money by the wealthiest people in the world. The return on this investment is that the financial and social interest of the very wealthy is represented at the expense of all others. If you are a republican of ordinary means and you think that George Bush is looking out for your social and economic interest, I feel sorry for you. You are a damned fool who is

unwilling to confront the evidence, afraid to see what is really there. You are encouraging and cheering on the very ones who are raping you. Easily swayed by empty rhetoric, you do not examine the betrayal of rhetoric through hurtful policies. You are a pathetic specimen of humanity.

The long nightmare emerged from sinister minds lusting for unlimited wealth and unrestrained power. It was aided and abetted by the commercial media every step of the wayï¿½a media owned by the wealthiest corporations. All of us are complicit. We were not vigilant in protecting the Constitution and upholding our civil rights. Through pervasive apathy and indifference we prepared the ground for fascism to germinate and to flourish. Now we are reaping the bitter harvest that may last a century or more.

Thus we allow the most atrocious lies uttered by political and moral prostitutes to go unchallenged. These lies are endlessly recycled in the commercial media until they become ingrained in the public conscience as truth. Worse than burying our heads in the sand, we bury them up our collective ass. How do you like the view?

The disgraceful and cowardly capitulation of the Democrats to the neocons in the confirmation of Alito to the Supreme Court demonstrates that the system does not and cannot work for just purposes. There are no viable opposition parties to compete with the Republicrats. We must be the opposition with our bodies; and we must do everything in our power to disrupt and subvert the cesspool of corruption that boils and festers in the nationï¿½s capitol, or it will consume us.

When will enough people with courage and conviction rise and fight? When will we drag the criminal Bush cabal kicking and screaming to the gallows? How much worse do things have to get? Let us stop kidding ourselves by trying to work the system, by trying to appear reasonable to authority. The fascists own the process that gives them power and wealth. Political reform is too weak to dislodge those whose tentacles are wrapped around the planet and injecting it with poison. Nothing short of filling the streets day after day with massive, unrelenting protests will dislodge the prostitutes from their seats of power. Massive rebellion is the only thing they have to fear.

Let us refuse to give this illegitimate government our cooperation. Let us disrupt and take possession of the economic engine that enslaves us. Nothing short of revolution will dislodge the fascist rulers from power. Either we fight or we passively accept what is coming.

If we continue to capitulate to our oppressorsï¿½the apostles of Plutocracyï¿½let us remove the lines from the National Anthem: ï¿½The land of the free; and the home of the brave.ï¿½ They will no longer apply here.

I was surprised to see PTWBR rate the 303 slightly higher than the 313. I guess it was primarily value versus price judgement. Did you opt for the e versions to better accomodate future motherboard designs or were there other considerations? If you were to make a reccomendation would it be to save up another 3 bills (or Bens actually,) and go whole hog, plus the postage? Thanks, S.

> that low of a level. Exceptions are some of the better auto radios.

What the stations are going to say is that you're outside the service area of the station being interfered with. WSM doesn't deliver a protected-contour signal to Waukegan, so officially, you can't get WSM there, and so officially, WSCR's lower digital sideband can't be interfering with WSM.

(as I understand the rules, right now WSM *does* deliver a protected-contour signal to Waukegan at night - but IBOC proponents want to drop all protection for skywave signals. There's no way IBOC can be authorized at night on clear channels, or on 1st or 2nd adjacents to clear channels (like 620), if they don't.)

But it sure seems to me like AM IBOC already is - during the day - causing interference within the protected groundwave contours of existing stations.

A new station (WCKD) came on the air on 1490 in Lebanon, Tenn. around the first of the year. That's about 40 miles from the WLAC-1510 tower. On a hunch, I drove over there last weekend.

On a typical car radio (factory radio in 2002 Ford Focus) there was noticable IBOC QRM on WCKD *within the Lebanon city limits*. Again, this is on a typical consumer radio - not a hypersensitive DX setup.

Again, as I understand the rules, a station (like WCKD) will not be authorized unless its city-grade signal encompasses the entire city of license. The city-grade contour is even smaller than the interference-protected contour - in other words, WCKD's protected contour extends beyond the city limits.

In other words, if I understand the rules properly, at least one "AM"-IBOC station *is* causing interference within the protected contours of an analog station. I would be very surprised if this is the only example. I *believe* I've heard interference in the protected contour of WJJM, Lewisburg (also on 1490) but haven't actually driven *into* Lewisburg to verify.

Certainly, WCKY-1530 has ceased to be a listening option until WLAC turns off their HD around 5:00...

FM, IMHO, is much less of a problem. Still, I think many listeners (especially in further out suburbs, like Waukegan, and outlying cities like Clarksville) will be surprised to learn they can't officially get their favorite stations. (the battle between the sidebands of co-owned 96.9 Zion and 97.1 Chicago will be interesting...)

I expect to lose my only adult-alternative and my only jazz choices if FM-IBOC is fully deployed.

These URLS have been floating around for a year. Nobody's done
anything with them. Why Isn't Cheney on FOX TV now saying they's
found Saddams WMDs.

Because Deulfer determined that Saddam didn't have any WMD material as
of 2000, and so he had nothing to send to Syria.

He had to have them to ship them.

How is it that we can find no Iraqi who witnessed WMD activities or
any paper files to support the claim that there was WMD or WMD
manufacturing facility in Iraq after 2000 that we did not find and
destroy before the war? Purchasing or making tons of WMD involves
thousands of people and millions of pages of paperwork for purchasing,
storing, manufacturing, training, etc, over a period of years. If you
make WMD you need to buy all the equipment and build facilities and
each ould have it's own witnesses and paper trail. Where is it ? I'm
sure rewards were offered. The Deulfer Report [3] describes the length
the inspectors went through to intergate and crosscheck Iraqi
statements.

Besides, a few plane loads of chemical artillery rounds isn't WMDs.
An estimates 100k tons of the stuff was fired in WWI, and London was
bombed with them, and we survived, and it's just a footnote in
history. We still dig up shells, or even bunkers of shells, in France
to this day.

Here's the Gov't home page for the Duelfer report

http://www.cia.gov/cia/reports/iraq_wmd_2004/

Deulfer concludes that no WMD were shipped to Syria or put on ship

Deulfer on Prewar Movement of WMD Material Out of Iraq:

"Based on the evidence available at present (Oct 7, 2004),
ISG judged that it was unlikely that an official transfer
of WMD material from Iraq to Syria took place. However,
ISG was unable to rule out unofficial movement
of limited WMD-related material

538. Seed.

Newsgroup: rec.radio.shortwave
Date: 2006-02-04 19:49:37 UTC
From: Apostle Keith Brown <apostlekeithbrown@peoplepc.com>
Message-ID: <lz7Ff.10555$rH5.1399@newsread2.news.atl.earthlink.net>
Source record: 60989

Hello,
This is Apostle Keith Brown. God, and His Son Jesus Christ, and Their angels appeared to me and sent me to tell you. They called me apostle. I am so grateful to God and to the Lord Jesus Christ for trusting me. God wants you to receive some of His Holy Spirit into you. Some people are getting old and haven't obeyed our Lord to do good works; they haven't sown seeds of righteousness, and haven't helped God's preachers. Everybody ought to help the gospel preachers by giving money like God told the nation of Israel to support the priests in the Old Testament. People talk about seed. They talk about seed of the word, seed of faith, money seed, as well as reproduction seed. They don't know that a third of the Bible IS NOT OF GOD. Be guided by God's Holy Spirit whenever you read the Bible; there is Roman empire stuff in there too. God does not want us to be satisfied with the STORY being in us; He wants His HOLY SPIRIT to be in us too. Go to Charismatics and say that you want the Baptism of the Holy Spirit. I used to get the Holy Spirit without tongues; But He came and left, came and left, came and left. Hey! What if God calls time while His Holy Spirit left? No, I want His Holy Spirit to stay in me. After you speak in tongues, the Holy Spirit stays inside you. AFTER YOU SPEAK IN TONGUES BY THE HOLY SPIRIT MOVING YOUR MOUTH, THE HOLY SPIRIT STAYS INSIDE YOU. If God calls time while His Holy Spirit is inside you, you are safe. I pray for you. Pray for me and you.

Hello:

Have an aero utility type question, but apparently the WUN Club only seems to have a list server for posting loggings, etc., but not for basic questions, so will try here.

Re all these "Huntress" frequencies that one sees:

Exactly what are they ?

Are they all Norad related, or also for general USAF usage, or... ?

Which are the most popular/used in the northeastern U.S. ?

Thanks,
Bob

You can certainly ask questions on the listserver, it's not just for loggings.

Your question might be better addresed by the folks on the MilCom list which you can subscribe to by going here:

I rather doubt that hooking a long wire antenna to your scanner is going to help.
A good antenna matched for that frequency range would be much better.

Don't know what size your Radio Shack DZ 399 is but I have had the Sangean
909 for years and it works great and it is a good travel radio or
emergency one too. It may have more bells and stuff than you what but in an
emergency they may be handy to have as well!

If typical of Grundig, the socket is a tape out and phono/tape input. Phono
input is high level (ceramic cartridge). This link should help you figure
out the pins you need to use:

Zenith 15-U-265

You can sit and listen to this 1939 classic all night. Pulls in
stations all across the dials(yes dials). Nothing beats the 15"
speaker in this radio. It's great for baseball as well.

There are no WMD in Syria because if there were we'd be making plans for
invading Syria. I don't see that happening, therefore the WMD are not
there.

> broadcasters use before their broadcasts?

5975 is a busy frequency. According to the ILG table the BBC starts
broadcasting from Delano and is ending a relay from Guiana at that hour
so maybe you heard chimes from both those relays.

According to Passport Uzbekistan and Vietnam are on frequency at that
time.

This situation might be a good candidate for a loop antenna where you
could null one of that stations out.

A NEW RECEIVER IS COMING: DSP KWZ30-2

Hello! From time to time I kept an eye on the Kneisner+Doering site, waiting for information about the successor model to their KWZ-30, a new model that had never materialized for years. Now it seems that the wait is nearly over.

Go to http://kd-elektronik.com/index_e.html and click on "DSP Receiver" and "DSP Receiver KWZ30-2". For the time being, only the preliminary technical specifications are available, but I'm looking forward to reading more about it. I own and like their KWZ-30; I hope the KWZ30-2 will be a step forward, in comparison to an already very interesting receiver. Usual disclaimer: I have no commercial connection with K+D; I'm posting this message only for your information. 73 (Fabrizio Magrone, Forlï¿½, Italy, Feb 4, HCDX via DXLD 6-023)

According to ILG if it was Spanish then HCJB and if it was in english
then radio Jordan.

Jordan is supposed to be 500Kw to NA 14:00 to 17:30 UTC so I expect that
is what you heard.

They do relay one of their FM outlets for the English service and the Western pop music is often heard.

Actually, me too. I have both (in fact the 303 encouraged me to buy
the 313, as I was very happy with it), and I believe the extra
features are well worth the price difference. But I can see PTWBR's
point, which is that for an ordinary listener the 313 might be an
overkill - you don't need such a highly accurate S-meter, 0.5ppm
frequency stability, etc. It is really more like an instrument than a
radio. But for myself, I always want the best in radios (I make up for
it by driving a cheap car! :-))

Interestingly, the WRTH gave it 5 stars, both for value for money and
performance.

>Did you
>opt for the e versions to better accomodate future motherboard designs
>or were there other considerations?

Portability. I travel a lot in my work and while at it, I do DXing in all sorts of strange places.

>If you were to make a
>reccomendation would it be to save up another 3 bills (or Bens
>actually,) and go whole hog, plus the postage? Thanks, S.

It really depends on how keen on radio you are. If you want the best of the best, get the 313. If you want a really good radio but not necessarily with all the bells and whistles, get the 303 and it will also do an excellent job, as PTWBR says in fact.

As others have mentioned it requires a subscription, so no free lunch.

Also, my experience with satellite radio is at best mixed when driving around trees and tall buildings. It pops in and out.

Given the wide variety of programming on free radio I see no reason to pay for satellite based signals. AFAIK they do not support local news and traffic so that is a significant minus. T

That's wonderful but off topic in this news group.

Starting out posting off topic in a Usenet news group usually results in
everyone reading the news group to put you in the kill file so you won't
be read from that point on.

There are plenty of religious broadcasts to listen to on short wave and
at the very least you would need to reference them as a way of posting
news relevant to the news group.

You could as an example reference a broadcast that inspired you in some
way detailing who was preaching (the programming), the station,
frequency, time of broadcast and how well you received it at your
location, the radio and antenna you used to receive the broadcast.

Please do not post here unless you intend to post news that is germane
to the news group.

You could become an evangelist for short wave radio.

> emergency.

Tell us more about your emergency scenario?
Although it's possible to come up with a situation where there's an EMP
that doesn't get thru your faraday box and doesn't kill you, either
directly or indirectly...
I think you're much more likely to succumb to a dirty bomb or car bomb
or bird flu or be hit by a bus or killed by a jealous spouse or your HMO.
What are the other parts of your survival strategy? Radio doesn't
do much good if you don't have food/water/shelter.

Hmmm, wonder if the radio transmitters are in Faraday Boxes?

I kinda like the Sony ICF-SW-100.
Sound quality is awesome for it's size.
Make me an offer.

Unfortunately, you can't make people revolt, even when it's in their best interest. Every situation has a tipping point, and nobody knows the tipping point. It seems to me that things have to get pretty bad before people will shoot the bastards. As long as people have adequate food, clothing, and shelter you can screw them six ways to Monday and they'll happily accept. The last time there was a serious chance of a revolution in America, it was 1932 and half the country was jobless, homeless, and starving. In the 60s things were pretty good economically; the main result of all the activism was limited scale terrorism (Weather Underground, Symbionese Liberation Army, some smaller groups) rather than mass rebellion. Full knowledge of a war that was a lie and a government that was corrupt and dictatorial wasn't enough to tip the balance. People had jobs, they had food, they had clothes on their back and places to live, and that's what was important. Even the big recession of the 70s and early 80s, when inflation was 13% and unemployment was 10% and many people were really truly desperate, wasn't enough to set off a rebellion. The only thing that will do so is a catastrophe like that predicted in Kotlikoff's The Coming Generational Storm or Duncan's The Dollar Crisis, where the dollar collapses and several different megatrends come together to cause another Great Depression. Only if the food supply and the basic necessities of life for every single American are in direct peril or collapse will people rebel. Right now anybody who tried to take direct action would be a terrorist rather than a revolutionary. Look at Timothy McVeigh-he tried to set off a revolution, he saw himself as a liberator, but history sees him as simply a terrorist.

The Degen/Kaito 1102 and 1103 are quite small and they get decent sound through earbuds. Both have SSB. I've used both, and feel these would be good for what you're looking for. There's also the Kaito 1101, which does not have SSB, but is very small, and it too sounds good when using earbuds.

There are other decent small portables out there, such as the Grundig G4000A (formerly known as the YB-400PE) and
the Sangean ATS-505P. Both of these have SSB too.

All of the above-mentioned models can be had for under $150.00 US. You can find many other portables that are much cheaper, but I cannot attest to their reliability or functioning. Personally, I would pay more and stick with the better models, as they are performance proven.

You may want to pick up a copy of the Passport to World Band Radio at a local bookseller or on Amazon. They have a large section of shortwave receiver reviews that cover everything from cheapie pocket portables to the bleeding-edge, high-end receivers that are similar to ones used for monitoring by the NSA.

Wide variety? Where do you live, I'm moving there. Everyplace I've lived in the past 2 decades has been the same old crap, talk shows on AM (and now encroaching on FM, too) and your choice of the same old Country/Pop/Rap/Rock on FM. There's no easy listening, no classical (except in a couple of large cities), no alternatives to the pablum that corporate radio wants to feed us (and that includes the Corporation for Public Broadcasting/PBS/NPR). If you're lucky, you may get live drive time shows, the rest is all satellite fed with local voice-overs.

Oops... sorry to follow up my own post, but I wanted to add something... I used to own a Sangean ATS-606 portable myself, and about the only stuff I could ever pull in down on the "basement band" (longwave) was local airport beacons and static. The ATS-606 was actually a decent little radio, but I prefer the Kaito/Degens, and have since sold the 606. If you don't require longwave capability, I still recommend looking into them.

www.google.com Effects of EMP on tube type radios

I still like the old style tube type radios the best,I always will too.I dont know how true it is,but many years ago,I read somewhere that in case of EMP,the tube type radios will sit there and stutter along for a while and then be working again as though nothing ever happened.Of course if the lights go out,so will any tube type radios and transistor radios.Metal garbage cans with tight fitting metal lids make good "Faraday" cages and you can store a lot of electronic stuff in them too.

I usually don't get involved in these threads, but I have a question. Out of all possible points of contention (or tipping points, or whatever) that could set off another American revolt, which do you foresee as the biggest?

I think it's oil, personally. Or rather, having its supply drastically cut, through whatever means. Thinking of all the things that petroleum makes possible in our society, not having enough of it would cause society as we know it to change drastically for everyone. Oil production affects food production, manufacturing, heating our homes, and running our businesses, not to mention powering our main modes of transportation. To go without, or be put on a severe diet out of necessity... well, I don't think the consequences are too pleasant to consider.

Yes it's only when people get very uncomfortable that they rebel. America is
far from uncomfortable but oil would probably do it. But how many would get
involved? If you go back and study the % of those that got directly involved
in the revolution that formed this country , you'll see the number was small
compaired to the overall population.

Nighttime IBOC might not kill AM radio, but it sure will make most fringe reception impossible. I've recently spent some time in California and the nighttime jumble of ground wave, skywave and adjacents is even worse than what I'm used to here in the Midwest. I can imagine the damage IBOC will cause.

Let's not forget the digital transmission fees Ibiquity intends to impose.

>
> On the receiver end, set prices will have to pretty much equal those of
> existing analog sets if they're to compete with satellite. They have a
> VERY long way to go to reach that point!

The electronic "journalists" correctly tell us analog sets are cheap and often sound crummy, but they don't tell us analog receivers could be much better for little extra cost. But cheap has been good enough for the people who buy radios. So, it's questionable whether alot of people would pay Ibiquity's digital receiver license fee mark-up, at least on the merits of "CD quality" sound.

However, people might pay extra for multicasting's extra program channels. Hell, if Ibiquity has a subscription radio scheme up their sleeve, they might get people to pay and pay and pay.

The point of the Iraq invasion was to secure the WMDs. If they made it to Syria before the war, then the war is de facto a miserable failure before it even started.

Remember when Rummy and crew said that Syria was supplying night vision to Iraq? Now don't you find it funny that Rummy and crew could find NV passing over the border, but not hundreds of thousand of tons of chemical weapons?

Besides, we "knew" where the WMDs were located. North, west, east and south of Tikrit, according to Rummy. ;-)

When will you kool-aid drinking Bush ass kissing whack jobs hit bottom and admit you were lied to? It is the first step to recovery.

The media corporations keep telling us that more channels mean catering to
niche audiences. But cable and satellite TV have mostly given us multiple
channels feeding us programs from the same tired library of action movies
and off-network reruns whether we pay or not.

Shopping channels and infomercials take up the rest of the time and space.

The stock corporation business model applied to media is the problem.

I remember seeing a remote panel for the Tentec RX320. That might be a
solution.

< Snip >

I grew up in western New York and don't recall AMBCB stations having
the amount of selective fading as they do here in southern california.
Night time AM broadcast band here in southern California is terrible
most nights with selective fading where the station can be completely
unintelligible for up to a minute or two even with continuously strong
signal levels. Back east the AMBCB or short wave stations would just
have the "normal" signal strength fading where the signal strength
would drop so it could not be heard momentarily. I have as a
consequence found sync detection indispensable for night time AMBCB and
the majority of short wave reception is much improved with it. Recall
that I am a program listener so I spend hours listening to a broadcast
and don't want to miss parts of it.

small
> compaired to the overall population.

You are right-- the usurpers were small in number, but they were influential and very outspoken against an unpopular ruler. The seeds of revolution were there from the start. The population of the colonies at the time was far lower than today, of course, but even considering the area colonized, most of the key decisions were still being made in Pennsylvania and Massachusetts.

I think that today, it'd take the removal of one of the key building blocks of our *present* society to get people pissed off enough to revolt. The key ingredient of our present society is petroleum products. I wonder how many people stop to think about what petroleum-based products control, beyond their home heating and their vehicles? Our whole society is based upon a plentiful source of the stuff. Take it all away, even for a short time, and American society would be transformed completely: heating oil, vehicle fuel, plastics, fertilizer, etc.

Nowadays, we take for granted such freedoms as speech, the right to bear arms, and so on. We of today's society didn't have to fight for those rights; they've been in place for over 200 years. Today, we are more concerned with the right to get to work in one piece and the right not to be disturbed by our obnoxious neighbor's stereo system at 2:30 in the bloody a.m. But such is the natural course of a nation such as ours, going about its business under the freedoms it was guaranteed over 200 years ago.

Most people don't realize this, but the seeds of revolution were built into our Constitution. The Founders' design for our government was to have it serve the people, not the other way around. If the government fails to serve the people, the people have the built-in right to replace it.

Yet, at the same time, so many people fail to realize what responsibility is built into our duties as citizens. We are content to not research, let alone attempt to understand, those who are running for our offices-- to represent us, no less!-- and if we bother to vote at all, our votes are influenced far more by sound bites via the media and far less by our own principles. Get to know those who govern you, as it is your right.

America is a complex entity, peopled by so many cultures, religions and beliefs. Yet I believe that taken in the spirit in which it was written, and

transferring it to modern-day understanding, we can still find some comfort in the guiding principles of the Constitution of the United States. The Constitution was, and is, a document way ahead of its time. So many of the people it covers just take it for granted nowadays.

Ignore your rights, and they will go away.

Jackie

613. FS: 2 Kenwood R-1000 Communication Receivers $300 shipped

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 02:57:03 UTC

For sale: 2 Kenwood R-1000 Communication Receivers. One is complete minus carrying handle, and the other has handle but is missing the fuse

holder and the small black end of the RF gain knob. Both are in working condition and tested. Cosmetic condition is good for age, with

no worn lettering but a couple small nicks here and there but nothing major. Would clean up rather well. Tested and all functions/lights seem to work just fine as well as LED readout.

$325 obo for both which includes shipping in the US. Out of US will be

more of course. I am selling both as package deal because of the missing parts on the one radio. Sold as-is due to age but both in working order as stated. 503-635-1980.

thanks,
CTV

I know that there are several plans on the internet for building a radio controlled clock. These involve building a fixed frequency rx and then hooking it up to a clock. How feasible would it be to hook the same circuit up to an amp and speaker instead of a clock? I suspect that the clock radios listen in on 60khz, but it should be simple to insert a crystal or change it to get 10Mhz. Also, you could build a radio with three frequencies-5Mhz, 10Mhz, and 15Mhz in order to take advantage of day vs night propagation.

Oil would do it. But think of how much depends on the current dollar
based world economic system. A debt collapse and dollar collapse would
certainly do the trick. And it would do it in many different countries,
including China, which would make Li happy but which might cause massive
problems.

I've been hearing a lot about a book called The Dollar Crisis by an
economist named Duncan who says that a deflationary economic collapse
brought on by a collapse of the dollar has the potential to permanently
sink capitalism, even if there's plenty of oil. Lots of people are
comparing the situation to Argentina, where the economy collapsed in a
very short time, the govt defaulted on its debts, and the country
narrowly avoided a revolution. I bought a copy of The Dollar Crisis
today after seeing it hyped so much on various websites. I've heard that
it's written in fluent economistese which makes it hard to understand.

Another good read is The Coming Generational Storm by Lawrence Kotlikoff, which argues for hyperinflation as the govt struggles to pay its massive debt and the massive expense of 75 million elderly baby boomers. If you want Kotlikoff's book in plain English, pick up Rich Dad's Prophecy by Rich Dad Poor Dad author Robert Kiyosaki, which argues that the stock market will collapse and devastate the 401k retirement system, leaving millions destitute in old age. Taken together they make the case for a massive worldwide economic collapse within the next 20-30 years that could certainly cause a revolution.

During the Great Depression there were massive protests and riots until FDR was elected. It is safe to say that without him there probably would have been a revolution. In the unlikely case that we have such a savior now, we might avoid a rebellion. But I certainly don't see anyone of that caliber around. McCain might do it, but he could be very old and retired by the time all this happens. Kotlikoff argues that the current dollar based world system is so fragile that any event could set off the big one, so it could happen tomorrow. If China decided to dump all its dollars, that would certainly set it off. Japan, which has been on the brink for years, might do it in order to raise money.

Give up on TV. Radio is where it's at!

TV progammers have learned to cater to the unimaginative. Did much of the "Leave it to Beaver"'s audience consider the possibility that Ward and June had taken Eddie Haskell under wing because Eddie's dad (the guy who was continually sleeping late or clobbering Eddie) was an abusive alcoholic? That's just one of the subtleies of that show, brilliantly written about a boy who was becoming dimly aware of the of the world and who idealized his parents. Did people think June really got dressed up to do housework? Talk about TV's pearls before swine.

Had the show been written twenty years later, a "very special" Beaver would have had the Cleavers doing an intervention on Haskell Sr. and fixing him in half an hour. Well, that one might have had to have been a two parter, but I'm sure they could have made Fred Rutherford less of a pompous ass in only one episode. Such was the understated reality of TV as the color era matured.

Should 3-D TV ever be developed, I'm sure complete morons will be the most appreciative.

>
> Shopping channels and infomercials take up the rest of the time and space.

In previous times in our economic history, there weren't enough skilled factory workers. Now we have the New Economy, and perhaps these now surplus workers could be retrained to productively program all those stupid repetitious TV channels. I've seen the schedules. Hardly any apocolyptic cold war dramas, cape canaveral monsters, flesh eaters and the like. Months can go between two-headed transplant movies. Well, I know what I'd put on my cable channel. But, then again, we all should get out and be more active. Or at least watch one of the fifty excercise equipment informertials running an any one time.

I was wondering why he needs to put the radio in a faraday cage myself. I've read that a typical EMP pulse bomb like Al Qaeda would most likely use would mostly work on anything *that was on the same frequency*. That means that if you're not in the immediate area, and your radio antenna isn't harmonic with the wavelength of the pulse, you have nothing to worry about. Dark Angel type scenarios where the whole country is wiped out by an EMP pulse apparently aren't very realistic, but they make for good TV. I think a dirty bomb is more likely. But the real threat is bioweapons-if Iran could weaponize bird flu or smallpox and make it into a super killer then the shit would hit the fan. Smallpox has the potential to kill 9 out of 10 people, that's what it did to the Indians. I'm more worried about a flood since I live in a part of California that has frequent major floods. I just worry that I wouldn't have the presence of mind to take my Degen, since I'd have 15 minutes to evacuate. A lot of the New Orleans refugees didn't have radios, and the lack of info caused by that and govt bungling caused much of the panic.

They'd still have records of their existence in Iraq, and the
testimony of military people, scientists and supply clerks. Nothing
has been found to suggest that Saddam had anything significant in the
years running up to the war. The inspectors were in Iraq until the day
before the war and comming up with nothing.

You're very close to Europe, so the ones you don't hear are probably
being beamed to South America or West Africa or something. Anything
beamed to Asia or Europe (there are a bunch of signals from Europe to
Europe) you likely get. Anything else, you don't.

There are probably forensic signs of programs even if Saddam was not forthcoming. Even after all this time and analysis there hasn't been anything concrete found to suggest ther was something going on. We were all told about how the former commanders and scientisits would break down and tell them (according to Rummy) where the WMD were. It never happened. Either this war was based on monumental failures in intelligence (and if that's so then that makes everything else the NSA/CIA knows suspect) or this was was based on half truths or even outright fabrications and lies. Take your pick.

I haven't looked at any of these circuits, but I'd expect it to be
quire easy to connect and audio amplifier and speaker to the output of
the detector.

>I suspect that the
>clock radios listen in on 60khz, but it should be simple to insert a

>
Converting a 60 KHz receiver to 10 MHz is likely impossible -
construction techniques and tuned circuits will be quite different -
you can almost use audio techniques and iron-core coils at 60 KHz, but
are well into RF territory at 10 MHz, and will likely have to use
air-core coils in the tuned circuits.

636. Vale Keith Glover of Radio Australia

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 06:51:12 UTC
From: Stephen Newlyn <vkqruqrtbpl5vka@ihug.com.au>
Message-ID: <43e5a06d$0$30423$5a62ac22@per-qv1-newsreader-01.iinet.net.au>
Source record: 61036

Info via Harold at aus.radio.broadcast

Veteran ABC Broadcaster Keith Glover passed away, Friday Feb 3.

In his long career with the ABC, Keith distinguished himself as a broadcaster, and particularly as a Radio Australia presenter.

His career began with ABC in Queensland in 1947. Upon moving to Melbourne Keith worked with Radio Australia for many years, broadcasting from studios in the old 'cottage' at the rear of Broadcast House, the 'biscuit factory' in Lonsdale Street, and finally from the new RA complex at East Burwood.

He was a consummate communicator and as presenter of Radio Australia's 'Listeners' Mailbag' became an 'interactive' broadcaster well before the term was popularised. He received a number of awards for international broadcasting.

Keith's voice was also well known on 'home service' radio, presenting a wide range of programs including news bulletins, sporting panels, Anzac Day marches, and Royal Tours. Keith was seen regularly on ABV Channel 2 and presented a ballroom dancing program for a number of years.

In the latter stages of his career Keith moved into management, working as Supervisor of RA's English Language programming and finally as Supervisor of Radio Presentation in Victoria.

Keith retired from the ABC in 1985.

I have always been suspicious since the time MIT (?) said, "you can't use
this version of it, but you can use this other version which is exactly
like the other version in every respect." Somehow I never believed the new
version was like the old version in every respect.

Well, hell, then they can do without that one percent and finance themselves,
can't they?

They repeat the bulls*it claim that only one or two percent of their funding
comes from Uncle Sam, but they scream like they've been tortured with
underwear on their heads if anyone tries to touch that money, saying they
can't live without it. That alone should tell even the weak-minded that
they're lying.

Many Thanks to the group for all the good advice. Im researching it all closely on the net, but I imagine it will end up being the Kaito 1103 as Id like to get the most frequency coverage for the money. It also has the sideband feature, which I know nothing abut apart from CB radio, but am learning about it. I like to pick up all the stations I can. I even once built a rig using the yoke from the back of an old TV picture tube attached to a cheap audio amplifier (like a "super ear" or some such) and could pick up some kind of beacon loud and clear. Interesting as it cost next to nothing to make.
I like the Kaito, but will also probably pick up an old used heavy rig, something like an old Realistic SW-100 just for nostalgia :o)
Again, many thanks!
Nathan

I have the KWZ-30 and I will be buying the new radio for sure. Hans is
a great engineer and was always out in front with DSP circuit design.

Radio design and build is not his regular job but he still provided
personal service to me when a nearby lightning strike took out the
mixer chip on my radio.He would e-mail me at midnight or 1AM (his
local time) with info or a circuit diagram and even sent me a couple
chips free of charge from Germany because they were only sold in large
quantity here in the US.

The KWZ-30 is still my favorite shortwave listening radio. The DSP
filter setup is still one of the best. Only the Icom IC-7000 comes
close with its AM filter selection.

I think it cost about $1965 with expedited UPS shipping (1998). Thanks
for the info, Ace.

Not just that. The transmitted code is also different.

654. LF Engineering H-800 antenna

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 13:28:57 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1139146137.385154.319580@g47g2000cwa.googlegroups.com>
Source record: 61104

Yesterday I took down the Wellbrook 330S antenna I've been using. I wanted to get this little chore out of the way, as I'm moving to a new home soon and will of course be taking the loop with me. I decided that, until the move, I'd put my LF Engineering H-800 antenna back into service.

After doing this and reacquainting myself with the H-800, I think I'm going to have to do some more careful comparisons between it and the Wellbrook. The H-800 is surprisingly...I'd even say shockingly...good. It's markedly better than the Wellbrook below 5 mhz. Maybe this isn't so surprising, since the 330S isn't optimized for those frequencies. Still, at some point I'm going to have to do a more careful comparison of them above 5 mhz....just for the heck of it.. I did notice that reception of Radio Australia on 9580 khz on the H-800 was better than I'd heard in a long while.

This confirms my impression that the H-800 is one of the best deals around on an active antenna, even though it's not particularly "talked about".

If anyone's compared the H-800 to a McKay-Dymek or Dressler antenna, I'd like to know the results.

Steve

> > And I'm sure Sadam would have revealed any WMD to those inspectors. I
> > don't know why Sadam always gets a bum rap.

After the U.N. inspectors wrapped up his Weapons programs in the early
90's his Scientitst would come up to him with outlandish plans.

Sadam would fund them lavishly..

- Only there Weren't ANY plans, it was all just lies..
- so, the Scientists would get huge chunks of cash. They's put it in a
Swiss bank account & try to get out of the country !

Then the RUMORS of the plans woould filter down, over to the Rocket
Scientists at The White House (Jeff Gannon & all)

then the rumors, based on lies would become the reason we invaded..

>
> There are probably forensic signs of programs even if Saddam was not
> forthcoming.

yeah, and there was Scant evidence of same..

Hanz Blik was right

THE FRENCH were right

TRhere Were NO WMD's in Iraq..

Wrong!

The problem is that the audience is not demanding better. We are
crappy consumers consuming crap.

Silencing dissent a growing trendBy Steve ThommaKnight
RidderWASHINGTON - The ejection of two women from the U.S. Capitol for
wearing message T-shirts during President Bush's State of the Union
speech this week was the latest incident in a growing trend of
stifling dissent.
Capitol Police later apologized for ejecting the women -- after one of
them, the wife of a congressman, complained bitterly, as did her
husband. The police acknowledged they'd acted overzealously.
But their actions weren't atypical in today's overheated political
climate. Protesters outside political conventions are herded behind
razor wire far from the action, citizens wearing a rival candidate's
stickers are forcefully ejected from presidential campaign rallies on
public property, and those who heckle the president or broadcast issue
ads within 60 days of an election can be prosecuted.
Silencing dissent isn't unique to the national government. Former New
York Mayor Rudy Giuliani once ordered city buses to remove an ad for
the New Yorker magazine that made fun of him.
Nor is it limited to one political party, noted Robert O'Neill,
director of the Thomas Jefferson Center for the Protection of Freedom
of Expression at the University of Virginia. Both major parties limit
speech at their national conventions, inside and out, he said.

In 1992, for example, the Democrats refused to allow an abortion opponent, the late Pennsylvania Gov. Robert Casey, to speak from the podium.
And when three anti-war protesters stood in the upper balcony of San Francisco's Masonic Auditorium last week during an appearance by Sen. Hillary Clinton, D-N.Y., and yelled, ``Hillary, stop supporting the war,'' they were quickly escorted away.
This trend has a chilling effect on those who disagree with people in power, analysts say.
``The long-term consequence is a higher degree of self-censorship,'' O'Neill said. ``Society is the poorer when deprived of the marketplace of ideas.''
The incident at Bush's State of the Union address was one of dissent via T-shirts. Anti-war activist Cindy Sheehan of Berkeley wore one that proclaimed ``2245 dead. How many more?'' Police charged her with a misdemeanor for unlawful disruptive conduct in the Capitol.
Police also ejected Beverly Young, wife of Rep. C.W. Bill Young, R-Fla., for wearing a shirt saying ``Support the Troops -- Defending Our Freedom.''
It wasn't the first time police have ejected Capitol visitors who wore message T-shirts -- and the practice isn't limited to the Capitol.
In Denver last year, three people were thrown out of a Bush town-hall meeting on Social Security after arriving in a car sporting a bumper sticker proclaiming ``No more blood for oil'' and wore T-shirts under their other clothes that said ``Stop the Lies.''
Evicting people who oppose the president, even if they don't say a word, was a carry-over from Bush's 2004 presidential campaign.
In Charleston, W.Va., a couple was arrested for wearing anti-Bush T-shirts to a Bush rally in the state Capitol building on the Fourth of July. Police said they acted under orders from federal officials. The charges were later dropped.
In Saginaw, Mich., Bush campaign workers ejected a woman for wearing a pro-choice T-shirt. The campaign said it had to throw out people who might make a scene.
In 2004, protesters at both national party conventions were herded into areas far away from delegates, officials and the news media. At the Democratic National Convention in Boston, protesters were kept in enclosed areas surrounded by fences topped with razor wire and watched by armed police.
It's a crime, punishable by up to six months in prison, to ``disrupt'' an event guarded by the Secret Service, which includes presidential rallies. A proposed extension of the Patriot Act now being negotiated in Congress would broaden such prohibitions to other vaguely defined national events.
But no one's been convicted yet of a T-shirt violation, and such prosecutions probably would be challenged as an affront to the First Amendment's guarantee of free speech.
The Supreme Court ruled in 1971 that it wasn't illegal to wear an obscene anti-Vietnam war jacket in a California courthouse, despite a state law prohibiting such messages because they might incite

violence.
Bans on certain shirts and shouts are not the only ways dissent is stifled. A 2002 campaign-finance reform designed to regulate the flow of money into politics prohibited broadcast of issue ads within 60 days of elections.
``We were not allowed to take out radio ads,'' said Nadine Strossen, president of the American Civil Liberties Union. ``We wanted to do ads calling on both party candidates to oppose the Patriot Act. That is now a crime. If we had done that, I would have faced a five-year prison term.''
The Supreme Court recently ordered a three-judge panel to re-examine the prohibition, which could lead to lifting the ban, but not until after the 2006 elections.

There's a little am-fm-sw radio with a dynamo & wind-up handle; no
batteries necessary. It goes under several brand names: mine is from

LLBean, a Grundig FR-200. About $40. Choice of fashion colors, also has a built-in flashlight :-)

Decent performance on the local AM-FM bands; picks up the louder international stations fine.

It's my emergency radio... How do you build this Faraday Cage dealie, and what's it do?

Huh? Yes, he is well into RF and construction techniques will be different.
But while there are advantages to air-coil cores, their use in recievers
went out with hollow state detectors. Even in transmitters they tend to be
only used in the KW neighborhood anymore. I can't imagine that even in the
wilds of BC people are winding air coils and building on heavy steel
chassis.

Yea plus people are extremely lazy when not at work now days and revolting
against the Gov. takes allot of energy, so I think revolution would have to
fall in the lap of necessity rather than principle. But who knows? I guess
if enough people start marching down a street, others will follow?

>

That's why things like gun rights and gay legislation are important to
follow in a free society. Anything deemed extreme or controversial are the
first to get kicked when liberties are at stake.

>

this seems like "lucid dreaming". lucid dreaming is true in this aspect, you can dream in a manner that leaves you semi-conscious and your will does play a controlling part. sort of like a director influencing the setting and tone of a movie that he is responsible for. lucid dreaming takes rock solid and razor sharp mental discipline (that i no longer possess) and is very dangerous. the dreams seem very real and convincing. its easy to believe that they are real experiences and soon you can loose your place in reality. its just like becoming addicted to drugs but there is no end to the supply of drugs. its all an illusion, a very amusing and realistic illusion. the author of this post is an example, he starts something that we all instinctively recognise as silly and juvenile. now he believes that the dreams are a real place in space and time instead of a sub-conscious fantasy. from our vantage point he looks self-deluded. if he is not already insane then soon he could be lost, unable to believe our reality and preferring the control and amusement provided by his reality. it looks silly now, but can rapidly progress to life threatening delusional behavior. dangerous play, very dangerous.

The list of examples would be each news reporter that has ever composed
a story and every broadcaster that has ever announced a news cast.
Inclusions and omissions of information, voice tone, raised eyebrows,
giving an opinion, etc., are all ways of coloring and filtering the
news. And there is not a person in the news business that isn't aware
that it happens, no matter how they try to be "objective".

"Ultra" portable inherently means a very small ferrite bar antenna for LW-MW reception. Which will preclude any strong stand alone performance on LW-MW without an external LW-MW antenna like the Terk Advantage AM loop or something else for LW.

My picks for the ultimate "Ultra" portable are the Sony ICF-SW100 or ICF-SW07. Both have Synch Detectors.

Daughter of Late Egyptian President Sadat Tells of Marriage at Age 12 to Abusive Husband

http://memri.org/bin/latestnews.cgi?ID=SD108506

Fact #1: When Muhammad began receiving his revelations, his first impression was that he was possessed by demons.
http://www.frontpagemag.com/websat/Helper/editor/www.answeringinfidels.com/content/view/64/42/

Fact #2: Muhammad supported his fledgling religion by robbing people.
http://www.frontpagemag.com/websat/Helper/editor/www.answeringinfidels.com/content/view/62/42/

Fact #3: Muhammad was often ruthless towards his adversaries. Punishments for taking a stand against Muhammad included torture and death. Both men and women were brutally killed for criticizing Muhammad. Hundreds of Jewish men were beheaded for standing against him, while their wives and children were sold into slavery. Some early Muslims who apostatized were killed after Muhammad gave the command to kill all who turn away from Islam. Modern Muslims often claim that Muhammad only killed when he was attacked by his enemies, but history shows that he murdered numerous people whose only crime was writing poems against him. Given the facts, it's difficult to understand how Muslim writers such as Mawdudi could have the audacity to claim that Muhammad "never took revenge on anyone for his personal grievances."
http://www.frontpagemag.com/websat/Helper/editor/www.answeringinfidels.com/content/view/61/42/

Fact #4: Muhammad had far more wives than even his own revelations allowed. We know that Muhammad had at least thirteen wives during his life, and that he had at least nine wives at one time. Of course, he did receive a Qur'anic revelation telling him that he alone could exceed the four-wife limit: "O Prophet! We have made lawful unto you your wives whom you have paid their dowries, and those whom your right hand possesses of those whom Allah has given as spoils of war, . . . a privilege for you only, not for the (rest of) believers". Nevertheless, since Muhammad was the one receiving revelations that allowed him to transgress rules that applied to everyone else, many people have concluded that he was inventing revelations to justify his hypocritical behavior.
http://www.frontpagemag.com/websat/Helper/editor/www.muslimhope.com/WhyDidMohammedGetSoManyWives.htm

Fact #5: Muhammad consummated a marriage to a nine-year-old girl. Muhammad's courtship of Aisha began when she was only six. Muhammad had a dream about her, which led him to believe that God wanted him to marry the young girl.

Fortunately, Muhammad didn't have sex with her until she reached menses at the age of nine. (Most girls do not have their first period by this age, but Aisha had been suffering from some form of intense sickness, which probably induced menses early.) Muhammad apparently took Aisha's first menstruation as a sign that she was an adult ready for sexual relations, and Aisha quickly became his favorite wife. Among her earliest duties as Muhammad's wife was the task of washing semen stains off his clothes: "Aisha (may Allah be pleased with her) narrated: I used to wash the semen off the clothes of the Prophet (the blessing and peace of Allah be upon him) and even then I used to notice one or more spots on them."
http://www.frontpagemag.com/websat/Helper/editor/www.muslimhope.com/WhyDidMohammedGetSoManyWives.htm

Now you know why Michael Jackson resides in an Islamic country.

Fact #6: Muhammad had a contemptible opinion of women. ...the Qur'an sanctions the beating of women: "As for those [women] from whom you fear disloyalty, admonish them and banish them to beds apart, and beat them (lightly, without visible injury) . Then if they obey you, seek not a way against them" (4:34) . Notice the parenthetical remarks that the beating should be a light one. These words do not occur in the Arabic; apparently, even Muslim translators have a problem with this verse and do what they can to water it down. Notice also that the beating is done to bring the wives into submission. Hell, then, is composed primarily of ungrateful women (perhaps their husbands hadn't beaten them enough) . However, even Heaven is a bleak prospect for women, for, according to Muhammad, women will spend eternity standing in the corners of Paradise, waiting for the men to come and have sex with them.
http://answering-islam.org.uk/Authors/Wood/women.htm

Fact #7: Muhammad is unique among prophets in that he is the only one to receive a revelation, proclaim it as part of God's message to man, and later take it back, claiming that it was actually from Satan.
http://www.answeringinfidels.com/content/view/64/42/

These are just some of the facts that Muslims have been keeping secret, but they are enough to make any reasonable person doubt the validity of Islam.

I thank everyone for replying to my inquiry about the best small portable MW-SW-FM radio meeting my list of specs.

With regards to the various "Faraday Cage" comments, I'll not reply to them in any substantive way since that is off-topic here (want to focus on "radios"), but for those interested, just do a Google search on "EMP Faraday," and several informative articles will result.

Now, as I look things over, I'm getting more and more intrigued with purchasing a Degen/Kaito 1103 portable.

So, where can I find this model at the lowest price? Also, should I stick with a Kaito (for the American market), or can I consider a Degen? (I heard the walwart with the Degen is not for U.S. voltages.)

Thoughts? Recommendations?

Thanks!

Roger

The list of specs mentions an optional Display Spectrum Analyzer. An interesting option, though a fairly expensive one, I expect.

It's also nice that the speaker will be mounted on the front panel, as it is on the KWZ30.

Back in the Superfriends cartoon when I was a kid, I distinctly remember
Mxyzptlk being 3 syllables. Not that I can remember what they are, but...
something vaguely along the lines of Myt-zel-plick.

Nothing wrong at all with finding old rigs (actually,I prefer the old rigs) at thrift stores,junk shops,yard sales,fleamarkets,wherever,whatever,for only a few dollars,,, pocket change.Look,if you spend over $140.00 for a portable radio or over $400.00 dollars for a table model radio in the usual stores,(forget ebay) you spent too much money.Go for the cheap sales areas.

>>
>
> Right now in the wild there are none. Zero. Ziltch. Nada.

I believe I said exactly that. Right now there are none in the wild.
But that doesn't mean there are none. There are. It's been demonstrated
that OS X viruses CAN be created, and CAN be very destructive.

Yes, right now, there are no OS X viruses in the wild. IN THE WILD.
But that's making a far different claim that OS X is totally immune. It
ain't. Apple is aware of it, even the Open Group, stewards of UNIX, know
it. Any system can be hacked, infected, and compromised. It's only a
matter of time before someone makes the effort because it's already been
proven it can be done.

Right now, there's nothing.

That says nothing about tomorrow.

That's because Superfriends was written by morons, for morons.

The editors of the Superman comics answered the question many times.
It's pronounced "Mix-yez-pittle-ick".

laugh

Well, David recommended I look at the Sangean PT-80 ProTravel, so I assume his comment about me needing psychotherapy is because I did not take his recommendation.

David (and others), how does the PT-80 compare to the Degen/Kaito 1103 with respect to MW and SW reception performance?

I save quite a chunk of change going with the 1103, plus the 1103 is a little smaller and lighter. Also, my research indicates the 1103's performance in several important categories appears to be better than the PT-80. To me, it seems like a no-brainer.

Comments?

Thanks.

Roger

Isn't that the VOA broadcast in Spanish to Central America on 5995? I still think that the main point of the Delano bc is to wipe out the Cubans on 6000 (which used to be an excellent freq for NAm listening) thus forcing anybody who wants to listen to Havana to use 9820. But wiping out a signal 20khz away is HUGE overkill.

Er, ok.

Anyway, I'm considering using the Degen as my daily listener, and relegating the DX-399 to storage. So I am interested in the here and now ("pre-Cheney bomb".)

So, let's get back on track and compare. Let's compare the relative sensitivity (MW-SW), and audio quality using earbuds between the following "ultra" portable models:

Sangean PT-80
Sangean ATS-606 (essentially same as Radio Shack DX-399)
Degen/Kaito 1103
Sony ICF-SW7600GR
Sony ICF-SW100

(Of course, there's a great variation in price, and in features. The ATS-606/DX-399 does not have SSB, which to me is not important, but to others is important. When I bought my DX-399, I paid ~$35, so it was a no-brainer to get -- I should have bought two.)

I'm sure a couple others could be added to the above list, but they should not be any larger than the largest already there.

Roger

I didn't see a Yahoo group devoted to the Kneisner and Doering
receivers, so I created one. I figure people can post
updates/observations there and interested readers won't have to wade
through all of DaviD's off-topic crap to find them.

You are completely wrong to say the only reason Macs are immune is because of their small market share. While it doesn't hurt to not be the biggest target on the block, it also doesn't hurt that Apple built OS X from the ground up as an internet age OS. Even Vista has legacy code from old versionf of Windows which is why there will be viruses lined up a-waitin' when people install it.

Like it or not, there are zero viruses in the wild for Mac OS X and that is a fact. I welcome the first one, it will only allow Apple to make stronger an already very strong, secure OS.

Let the flaming begin (well it already has) but I'd not spend a dime on a Windows powered machine if only for the spyware and viruses out there. Not only is Windows a big target, it is a weak one out of the box.

Oh - and think about this - don't you think someone by now would want the notoriety that would come from being the first to cause us Mac owners to run out and buy anti-virus software? I find it hard to believe that nobody at all has at least tried!

Anyway, back to reading rrs - easily the most bizarre forum on "radio" anywhere on (or off) the 'net.

What was the last Mac you used that "can not do anywhere near (sp) as much things that Windows operating sytems can do"? It is true that games (get an Xbox) are not huge on the Mac platform but other than that, Mac OS X can do anything Windows does - without fear of an attack from any of a mulititude of directions.

I used to run Windows XP on my Mac for the one app that I needed that literally wasn't made for a Mac but as of a year ago, I run OS X and nothing else (except a Linux box in the house) because there is no need for me to run Windows (key word: me).

I do not mind facts, but I do mind blather from people that have not used a Mac in 10 or 15 years and using that is a current yard stick - it would be like using Windows 1.0 (there's a winner!) to compare to any 2006 operating system.

It is a matter of time until an exploit is found on OS X but it is amazing that 5 years now and nothing has spread through the community yet. Give that to the guys regardless of your reasoning for why it hasn't happened.

PS - From what I read, the police, FBI, etc hate nothing more than having to crack a Mac when a criminal uses one. I am no criminal but that makes me feel damn good being a Mac user.

The Sangean 909 is aka the Radio Shack DX-398, which I also acquired at the same time that I acquired the DX-399. The DX-399 is about the half the size. It is really a terrific choice for a backpacking tour of Europe, Australia, Asia, etc. What a gem.

> SuitSat is too far from your station to receive a reliable signal. We
> have found that closest approach provides several seconds of SuitSat
> communication with 22 element yagis.

Wow, what an understatement saying that "high gain receiving systems"
are necessary--a 22(!) element Yagi with a mast mounted pre-amp...to get
"several seconds"!!!! Folks, that's a BIG antenna, even at 2 meters and
that's a *weak* signal.

I was trying to hear a high pass this morning (about 70 degrees) and no
luck... :-(

Well, at least I re-discovered the "Orbitron" program (www.stoff.pl) and
it's highly recommended. Great program! (BTW, Suitsat Keps [TLEs] have
been available almost from the second or third orbit. Way to go, NORAD!)

It's harder than you think making antenna comparisons. As an example my
loop antenna generally works better during the dark hours and the folded
dipole works better daytime. It could be due to the reception angle of
the antennas but that is what I have found. Sometimes one antenna just
works better then another depending on conditions and frequency.

795. WWV and WWVH on 20MHz

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 21:58:43 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-160B65.13584305022006@newsclstr02.news.prodigy.com>
Source record: 61196

I haven't picked up either WWV or WWVH for the last few months on 20MHz
but I was able to do it today.

At around 18:00 UTC today, which is 10:00 AM my time.

20 MHz WWV weak and WWVH not at all.
15 MHz WWV strong and WWVH a little weaker.
10 MHz WWV and WWVH strong.
5 MHz WWV weak and WWVH not at all.

I don't understand the 5 MHz result as I would expect that WWVH would
have been stronger at that time then WWV.

796. Radio Australia and New Zealand reception today

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 22:05:24 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-07A5D2.14052405022006@newsclstr02.news.prodigy.com>
Source record: 61197

21:00 to 21:30 UTC I'm not getting NZ on 15720 KHz at all.

I expect 17675 to be better later and improve through the 22:36 to 3:59
UTC time slot.

The Australian frequencies are better at the highest current broadcast
frequencies during the hour of 21:00 UTC.

From worst to best:
11650 fourth best
11660 third best
12080 worst
13630 second best
15515 the best

798. Radio Database software to browse HFCC, ILG, Eibi listings ???

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 22:08:14 UTC
From: switcher <bluewhitethisnot@fulladsl.be>
Message-ID: <43e67767$1@news.stben.net>
Source record: 61049

I once had RLDB from Fineware, but it is no longer available.

it had a feature where one could see a world map, and the covered zone
by a tx.

I also know about Radioexporer.com.ru but this one is written in Java,
and thus slower (on older equipment - nice interface though, and it
doesn't run on my mac, and I now will partially work on pc/win/linux and
mac)

There is an app called GNPDB from ILGradio too...

But is there something that can replace RLDB, or where can I find the zip??
I could try to move an install on an existing win98 to another machine,
but am not sure that will work fine ...

Didn't find it at tucows ...

Thanks,
Marc

799. General reception on the SW bands today improved

Newsgroup: rec.radio.shortwave
Date: 2006-02-05 22:10:33 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>

I don't wade through all of DaviD's off-topic crap in this news group.
The kill file takes care of that.

Well that explains the no reception on NZ. I will have to keep an ear on
there channel to see when they return. Reception on 15720 has been weak
of late and I though it was was just a propagation problem. Thanks for
the tip.

The Superfriends cartoon had Myxie's name pronounced mix-ul-plick, as I
recall. I believe it was pronounced kip-leh-skim backwards.

I remember having a Superman record way back then that pronounced his name
mix-pit-ulk. I can't honestly remember how the record said it backwards,
though I think it was kulp-leh-zix-im.

Here's a good one.. (from SecureMac.com) Seems that the Mac antivirus application is a security hole...

5.26.2005 News
Clam Anti-Virus (ClamAV Mac OS X) is affected by a command execution vulnerability as described within the advisory. Details within the advisory claim that when a suspected infected file is handled by the program and is not able to be removed ClamAV may attempt to copy it to another location utilizing the 'ditto' utility in Mac OS X. The ditto utility is called in an insecure manner allowing the attacker to include arbitrary commands in the file name that will would be executed in within ClamAV. The most recent version of ClamXAV is 0.85.1 and is not vulnerable, be certain you are running the latest version of this product.

Tuesday Afternoon Show:
http://www.tuesdayafternoonshow.com

Tuesday With Little Spain.

And I am shoved back into this night life.
Well, she said, she said,

she said it was impossible.

There is a place, it smoulders, it is the past, dreamtime,
wander these dark corridors of memory.
I sleep so deep, I don't like to sleep,
my dreams threaten to take me away.

Floating in a sea of bad vibes,
I do these things over and over,
repentatively,
feel regret but keep doing it over and over.

Then the whole thing becomes a blur.
Grey and pasted, patched together with spackling
and sheet rock mud,
a disgusted perversion of humanity.

During the decline and fall of poetry,
in the summer of sardonic excess,
I sat with Little Spain on her steps, and felt her softness.
Still a sky poet, though tattered and glowing,
brought down from Blue Territory, no longer in Blue Territory.
I wandered by a cold river
in the flaming copper land of summer.

This complete process of remaking we had,
your mix of pales and shades,
your, disctinctive mythic self,
one distinct sing of your eyes...
I must bitterly understand our fate,
we were never meant to be,
Like lost in the mirror'd rooms of a crazy house.

Crimson on the napkins,
pink fuzz on the clover.
Maneuver to the left, and forward,
into a mud soaked future.

-Will Dockery

They were supposed to switch over to 17675 KHz at 22:36 UTC but I don't
hear them there. However I have seen a carrier coming up and down on
15720 several times since that switchover time.

I'm not a big fan of Sony. They break.

I have an ATS-606A (it has 1 KHz fine tuning). I enjoy it. The PT-80
intrigues me.

The radio output is ~ 8 ohms the same as the impedance of the average
speaker. Best bet is put them in series. The situation adds well if you
happen to have two 4 ohm speakers in series but most bookshelf are 8
ohms. One loudspeaker does the job anyway.

No biggie on being stuck with a cheap radio, as my father-in-law and I like to dabble with radios. He has a little trading post in a neighboring town. We buy, sell, trade, mostly CB radios, and the occasional scanner. We dont run across many shortwave sets. He has an OLD Robyn CB rig right now, along with an old Regency. Tube types, and they work good. Somebody will come along and want them eventually.
But if we cant sell, we usually manage to trade for something else we want :o)

Challenge which had the main villains of the Justice League compete to see
who was the bigger idiot as demonstrated by some reviews of the first seven
episodes <http://pw2.netcom.com/~rogermw/cotsf/>. The writing was horrid
even by Silver age standards:

In "Superfriends Rest in Peace" the Superfriends have gotten a crystal able
of killing all of them and instead of destroying the thing they bury it
under the Hall of Justice. If that is not enough given the ease the Legion
of Doom breaks into the place there are no alarms on the place.

(This all ignores the fact it would have made more sense for Luthor to simply recreate the crystal or make it from stratch.)

After the LoD get the box and Luthor fails to open with his gadgets Sinestro proclaims that is must be made of a weak Krypton steal that only Sueprman can open. HELLO Legion of Idiots, you have a member just as strong as Superman - his name is Bizzaro.

When Luthor dresses up the box as a ray gun does Superman X-ray it to see what it really is? No he does just like he did back in the Silver Age comics and act firsts and realizes he has royally screwed up. Then the LoD doesn't notice that in the battle with Sinestro Hal's green energy knocks Sinestro's beam away. ARGH the real Hal's ring cannot effect yellow in any way. Sinestro where is your brain? As a former GL you know this.

Then to finished up the stupidity after all this hassle do the Superfriends finally get the message and destroy this thing? NO, instead they have Apache Chief go down in a radiation suit, find the crystal shove it into a high-tech bazooka and shoot the thing in space where any freaking two-bit space hood could get the thing forcing the Superfriends to go through this loopy plan again.

"Giants of Doom" has the added problem of Hal bottling up Sinestro with his ring and Sinestro doing nothing about it. As shown in the Green Lanten Showcase in 1961 Sinestro first used the yellow ring that worked by absorbing GL energy. Even if he didn't have that ring the fact that yellow is the bane of GL energy he should have been able to cut through the bottle with no problem.

Finally there was that seen where Luthor would show up on the Hall of Justice's viewscreen to rebuke some comment a Superfriend made. That tends to imply that Luthor had bug in the Hall of Justice and nobody had the brains to go look for it.

I used before and I chanced because they are not well shielded and produced interference sound during transmitting on VHF. Now I use a telephone amplifier system bought on a flea market. I use this with my Teletron TE 704 C receiver, it has only a control speaker.

Regards,

Ralf

Currently 00:27 UTC Australia is best on 17715. 17795 and other
frequencies on lower bands are much weaker.

That's because Superfriends was written by morons, for morons.

The editors of the Superman comics answered the question many times.
It's pronounced "Mix-yez-pittle-ick".

.....

Originally it was pronounced Mix-it-plk and later became
Mix-yez-pit-l-ick.

I assume you're in the Santa Clarita area? The transverse mountains between Bakersfield and LA (not sure what they're called officially, the Techachapis maybe?) are The Dead Zone when it comes to radio. You simply can not hear ANYTHING on AM or FM in Lebec or Gorman or anywhere in the Tejon passes. When driving south, I notice that some stuff from LA fades in, albeit noisily, in Santa Clarita and then dies again until you get fully into the San Fernando Valley. The mountains around LA play havoc with radio. Riverside has to have its own set of FM stations because the LA based stations won't reach.

You may be right about that. But that is not Total Immunity, which
was the point. For now, there's nothing in the wild. But there have
been viruses constructed that WILL attack OS X, only one of the reasons

for the periodic security updates issued by Apple. These have been openly acknowledged by both Apple, and the Open Group, stewards of UNIX from which OS X is constructed.

There may be nothing for some years to come. Then again, if Apple, like Mozilla Foundation which also monitors security issues for its products, continues its vigilance and releases security updates for its products as proof-of-concept assaults are created, there will be far less to fear from viruses and other exploits under Mac than Windows users will ever enjoy.

But the hard reality is that there is no immunity. And all it takes is ONE committed individual to prove that definitively.

Technically, it's supposed to be pronounced "Kill tip sizes kim." But
the Superman editors fudged it around a bit.

I haven't used my rig for several months so I had to fix a slipped connection in the antenna. Finally tuned in at 0134 to hear Quran readings and/or prayers. Then OM talking. Frustratingly, the discussion was just below the audibility threshold; I could make out a voice and occasional interlude music, but I couldn't actually understand what he was saying. Freq was very noisy. Using USB produced a loud whistle that could not be attenuated; using LSB eventually produced a clean signal, but still not understandable. AM wide was very staticky. AM narrow revealed some sort of data tx making it impossible to make out the signal. Unfortunately, this one was a wash tonight, and normally the local news in my area comes on at this time, making it inconvenient (today was Super Bowl Sunday, therefore no news). I live in Sacramento, California.

The original pronunciation is Mxyztplk. Pronounced exactly how it's
spelled. "Mx-yzt-plk" (Mix- yizt-pulk, for those who can't live
without vowels). This is how Siegel and Jack Schiff pronounced it.
According to Alvin Schwartz , Mort Weisinger couldn't pronounce it at
all and called him "Mixy". This lead to the missspelling that
resulted in Mxyzptlk, which according to a very old letters page, was
pronounced "Mix- yez- pit- el-ick." Later, after E Nelson Bridwell
arrived, this was corrected to "Mix-yez-pit-lik".

Other pronounciations abound. I forget what they said on Lois and
Clark or Smallville, and I never saw the old Superboy series.

Will everything everywhere be wiped out by the bomb? Will all
transmitters be wiped out? I figure that Europe will be spared, and thus

I can listen to the BBC. EMP covers a narrowly defined area. You can't get it to cover whole continents unless you send it REALLY high up in the atmosphere. The only rogue state with ICBMs is North Korea, and if Kim would launch anything, he'd launch an actual bomb instead of an EMP device. Of course, the USA could send up an EMP device over Iraq, but they already have ways to counter cell phone triggered IEDs (now the insurgents run wires).

Congrats on buying a new home. It would be interesting if you could do a shootout with the Wellbrook, LF and a 75' longwire if you have the space for it. Do you have one of the AOR loops also. I am in an apartment and looking into something to mate with my R-75. Looking for better performance than what this indoor ceiling loop and Sony AN LP-1 can provide.

The radio audio output line would go to the amplifier for the
amplified speakers, and the amplifier is normally designed to power
two midrange speakers and a floor-woofer.

Only problem I can see is the computer speakers might give better
fidelity to things like static and manmade noise.

Isn't "Miss Nude Islam" an oxymoron? In fact, isn't the beauty pageant considered to be against Islam? In fact, we'd probably have Dialing For Jihad, an imam will say a prayer to help your car bombing be successful, and will read appropriate verses from the Quran. All for 499 riyals. We'd have game shows like Tribal Feud, people try to guess what Muhammad actually said (And the Prophet Says...) with the winners killing the losers. We'd have Jerry Springer like shows: My Wife Shows Her Ankles In Public! The host would give the husband a scimitar to behead his whorish wife with, then the audience would attack each other. Ah, the brave new world of the universal Islamic caliphate!

Well, you won't find as good of a deal as Radio Shack had. The PT-80 is cheap and is a better clock than a radio, according to Passport. If you like the 606, get another one, but you won't get it for anywhere near $35. If you want a Degen (either the 1103 or the sister rx the 1102) then you can find new ones for $50 on Ebay. If you want a Sony, you'll pay through the nose ($150 for the 7600-IF you can find one). When there are better, cheaper portables out there, why bother? Bottom line: if you want an identical twin to what you've got, buy the Sangean. If price is a concern, buy the Degen. Oh, and ignore David, he's a weirdo.

Well, price is a consideration, but so is performance.

When it comes to receiver performance (sensitivity/selectivity/etc.)
how does the Degen/Kaito 1103 compare with the Sangean ATS-606?

From what I've read, the 1103 is a better performer in this regard. It
is supposedly at least as good in audio quality (to earbuds.) And
throw in SSB to boot.

The one downside to the 1103 compared to the 606 is that it is
slightly larger in size and weight (but not much.)

Anyone here done a side-by-side comparison between the 1103 and 606 (or the equivalent RS DX-399) with respect to MW-SW reception?

And where can I get a Degen 1103 for $50? I checked on eBay, but haven't found a seller yet at this price. The best price I've found for any 1103 is $89 (and a Kaito which is for the American market.)

Anyone?

Roger

Maybe after I'm settled I'll do a more thorough test. Telemon is right to point out that, if such a comparison is to be done correctly, there are a lot of variables to control for.

You might consider the H-800. It's available in the US and would easily outperform the AN LP-1. It's small and easy to locate in a quiet spot. Unlike the Sony loop, you could mount it outdoors, which is key. An excellent value for the money. I'm surprised that it doesn't get more positive press, but then I don't think the guys at LF Engineering have worked that hard to market it.

LF Engineering is a good company to deal with, by the way. I found them to be very helpful.

I know a couple of people who've complained that they had overload problems with the H-800. I suspect this was more the fault of their receivers than the H-800. However, in any case, these problems would disappear with a good high pass filter.

Steve

Try an ebay seller named Liypn, his store is V Com Collections. His radios are labeled Degen and are for the Chinese market (but mostly labeled in English) and run around $45 or so. He doesn't use the name Degen at all in his posts, just the model "1103". Search for "1103" or some other radios he carries like "Tecsun" (called Grundig or Eton in the US) and some ads from him should pop up. Whenever I need to find his site I search for "Tecsun" and then look in the results for V Com Collections (be careful not to click the wrong store-two or three show up). I don't have either radio, so I can't give you a side by side test. Ask someone who has 100 radios (there are several here) for an opinion.

Now I feel like someone is playing a joke on me it's 04:40 UTC or 8:40
PM my time and the sun set hours ago and I'm still getting WWV on 20
MHz. It's much stronger on 15, 10 and 5 MHz. Usually around this time on
in the evening 2.5 and 5 MHz are best but right now 10 MHz is the best.
I never gotten WWV on 20 MHz after dark before.

I heard that when you got arrested for fucking that pumpkin, Davies,
that Officer Taylor
relly felt like she didn't have to call a male officer to strip search
you, since you had the equipment of a woman......

I heard that when you got arrested for DUI last Novermber you whined
that Officer Taylor actually get a male officer to do it ddespite the
fact that when she arrested you for fucking that pumpkin before, she
saw that you had the "equipment" of a woman. "No wonder you are still a
virgin," is what she said in her report.

Which is why I mentioned McAfee. The company created A/V software
and it was entirely Mac oriented. Although, to be fair, Mac wasn't UNIX
at the time as it is, today. That does make a difference. Still.....

Viruses will always be written to
> attack whatever is the most popular machine - that's the WINboxes these
> days.
>

Exactly. Although there have been a few hitting Linux, lately. And
the crew at Cupertino have demonstrated working viruses that will attack
OS x.

The iPod halo has resulted in a boost in Mac sales in the last year.
Not anywhere near the kind of market share enjoyed by Redmond, but
enough that this kind of dialogue takes on new meaning, and that
Cupertino has focused a good deal of attention on the problems of
maintaining security on Macintosh computers.

Who knows. There is an unusual high over the Great Basin.

Radio Havana was coming in s+30 around 9pm PST. I've never seen it that
strong. It was their 6mhz frequency.

One thing not to get hung up on in antenna testing is the signal
strength IF the antenna is active. With amplification, you can get any
S reading you want. It's not a figure of merit for signal quality.

I made a "form" of sorts where I can easily test out different wire
(i.e. loop) configurations with the Wellbrook ALA 100. If you put too
many turns of wire on the form, there seems to be a resonance. I was
getting a lot of hash around 7Mhz with 24 turns at 8ft per turn.
Cuttting that to 6 turns seems pretty good, but I'm still experimenting
with it.

I use sprinker risers to run the wire over. The type I used has grooves
on it. The grooves holds the wire in place. I can't find a good photo
of it on the net, but the risers are sold by Lowes.

Well, something like that was almost tried before...

A new non-fiction book, "Red Star Rogue", tells about a rogue Russian sub that in 1968 actually fired a 1 megaton missile at Pearl Harbor. Had it gone off, the Russians were going to blame it on the Chinese.

As it turns out, there was a final fail-safe mechanism the rogue crew either did not know about or did not know how to disable, so it blew up in the sub's launch tube (NON-nuclear explosion) and sunk the sub.

The book goes on to describe how Howard Hughes built the 'Glomar Explorer' that ultimately and successfully raised the pieces of the sub.

A really scary book--we came close to WW III--and it made the Cuban missile crisis look like a walk in the park.

Fascinating book...

To the original poster: There's a guy on eBay named Liypn who sells the 1103 for under $50. I ordered one from him and got it in 7 days. I believe he ships from Shanghai (or perhaps it's Hong Kong?). He also sells an adapter to work on US mains, but I have only used batteries in mine.

The US version (Kaito 1103) is the same radio. It will have a 1 year warranty and comes with an AC adapter. You can buy it via several online retailers. It will cost more, but you would not have to ship it all the way back to China in the unlikely chance there is something wrong with it.

Yes. The 1103 wins in sensitivity and sound over the 606. MW reception on
the 1103 is excellent too.

How about (RVolger at cityofglendalewv dot com) as a place to send
copies of your posts? I'm sure that Volger can contact both Google
and Microsoft to find proof of your real ID.

After that, he can have you recomitted to the mental hospital.

There is nothing "idealistic" about the dream of world conquest. Every tinpot dictator and two-bit demagogue down through the ages has entertained the same crazy delusion and imagined themselves to be great world-historical figures, giants towering over the pygmies of the earth and shaping their destiny. In the end, all these madmen met an appropriate fate, their "empires" turned to dust and ashes, their people reduced to starving semi-savagery. Every totalitarian system that sought to aggressively impose its strictures on the world did so in the name of "idealism" ï¿½ and the results are to be seen in the bloody history of the last century, 100 years of world war and genocide. These "conservatives" who hold the reins of power today are a strange bunch indeed: they neither recognize nor understand the lessons of history, but instead seek to use a highly distorted version of it to advance their agenda of endless aggression

Unfortunately, they don't seem to offer the option of having bnc connectors instead of a permanently attached cable between the antenna and the coupler.

LF Engineering offered this on the h-800 for another $20 or so, and I thought it was a good idea.

I used to use an H-800 for my portable setup, and it was a nice antenna, but using it as a portable meant the coax was stressed where it enters the probe.

On Ebay you will get the best price for a Degen DE 1103. The Kaito
badged DE 1103 can be had in the U.S. for about $30.00 more.

Rather than trying to use the built-in wall wart charger I opted to
rotate two sets of NIMH batteries and a separate charger. The
built-in set-up for charging was not well designed because you have to
set the number of hours for charging - no auto sensing circuit on
either model. Leaving a portable hooked up for 12 hours seemed to
defeat it's purpose as a portable.

I replied. Apparently the NSA swallowed it up.

One of the techniques used by the bad guys is the undermining
confidence of the foundations of Democracy.

A skeptical news media is essential to a healthy government. A news
media in lock step with the entrenched power structure does not serve
the people.

Again, please give us some examples of ideology affecting the
dissemination of factual information. Thank-you.

The latter seems correct - this table indicates that the difference in
loss between the two at 10 MHz is only 0.1 dB, very small. I was,
however, under the general impression that RG-8X is somewhat more
durable...can't say where I heard that, however.

Actually, Marvin was Marvin White, son of Diana Prince White, the nurse
who was identical to Wonder Woman who let her have her identity when
she came to Man's World.

Wendy was Wendy Harris, daughter of Harvey Harris, the detective who
taught Batman all of his deductive skills when he was a boy.

This is from the letters page of the first issue of the Super Friends
adaptation, so it's not canon, but it's the only explanation I've ever
seen.

Common sense would tell you that the things we communicate to one
another are by definition colored by our experiences, background and
temperment. There is not a newsman who is 100% objective, as much as
many of them try to be.

902. numbers station reported on 7.10mhz

Even some American brand names of some products sometimes burn some houses down.I think it was a certain American brand name of electric coffee makers that a number of them did catch fire and there was that Daimler/Chrysler hybrid car on recharging the batteries in a certain garage in Florida that did burn most of that house down.(Look em up) One thing is for sure,y'all will never catch me buying a Kaito or Degen "radio"

More Deception from the Bush White House

By PAUL CRAIG ROBERTS was Assistant Secretary of the Treasury in the Reagan administration. He was Associate Editor of the Wall Street Journal editorial page and Contributing Editor of National Review.

Gentle reader, if you prefer comforting lies to harsh truths, don't read this column.

The state of the union is disastrous.

By its naked aggression, bullying, illegal spying on Americans, and illegal torture and detentions, the Bush administration has demonstrated American contempt for the Geneva Convention, for human life and dignity, and for the civil liberties of its own citizens. Increasingly, the US is isolated in the world, having to resort to bribery and threats to impose its diktats.

No country any longer looks to America for moral leadership.

The US has become a rogue nation.

Least of all did President Bush tell any truth about the economy.

He talked about economic growth rates without acknowledging that they result from eating the seed corn and do not produce jobs with a living wage for Americans.

He touted a low rate of unemployment and did not admit that the figure is false because it does not count millions of discouraged workers who have dropped out of the work force.

Americans did not hear from Bush that a new Wal-Mart just opened on Chicago's city boundary and 25,000 people applied for 325 jobs (Chicago Sun-Times, Jan. 26), or that 11,000 people applied for a few Wal-Mart jobs in Oakland, California.

Obviously, employment is far from full.

Neither did Bush tell Americans any of the dire facts reported by economist Charles McMillion in the January 19 issue of Manufacturing & Technology News:

During Bush's presidency the US has experienced the slowest job creation on record (going back to 1939).

During the past five years private business has added only 958,000 net new jobs to the economy, while the government sector has added 1.1 million jobs.

Moreover, as many of the jobs are not for a full work week, "the country ended 2005 with fewer private sector hours worked than it had in January 2001."

McMillion reports that the largest sources of private sector jobs have been health care and waitresses and bartenders.

Other areas of the private sector lost so many jobs, including supervisory/managerial jobs, that had health care not added 1.4 million new jobs, the private sector would have experienced a net loss of 467,000 jobs between January 2001 and December 2005 despite an "economic recovery."

Without the new jobs waiting tables and serving drinks, the US economy in the past five years would have eked out a measly 64,000 jobs.

In other words, there is a job depression in the US.

McMillion reports that during the past five years of Bush's presidency the US has lost 16.5% of its manufacturing jobs.

The hardest hit are clothes manufacturers, textile mills, communications equipment, and semiconductors.

Workforces in these industries shrunk by 37 to 46 percent.

These are amazing job losses.

Major industries have shriveled to insignificance in half a decade.

Free trade, offshore production for US markets, and the outsourcing of US jobs are the culprits.

McMillion writes that "every industry that faces foreign outsourcing or import competition is losing jobs," including both Ford and General Motors, both of which recently announced new job losses of 30,000 each.

The parts supplier, Delphi, is on the ropes and cutting thousands of jobs, wages, benefits, and pensions.

If the free trade/outsourcing propaganda were true, would not at least some US export industries be experiencing a growth in employment?

If free trade and outsourcing benefit the US economy, how did America run up $2.85 trillion in trade deficits over the last five years?

This means Americans consumed almost $3 trillion dollars more in goods and services than they produced and turned over $3 trillion of their existing assets to foreigners to pay for their consumption.

Consuming accumulated wealth makes a country poorer, not richer.

Americans are constantly reassured that America is the leader in advanced technology and intellectual property and doesn't need jobs making clothes or even semiconductors.

McMillion puts the lie to this reassurance.

During Bush's presidency, the US has lost its trade surplus in manufactured Advanced Technology Products (ATP).

The US trade deficit in ATP now exceeds the US surplus in Intellectual Property licenses and fees.

The US no longer earns enough from high tech to cover any part of its import bill for oil, autos, or clothing.

This is an astonishing development.

The US "superpower" is dependent on China for advanced technology products and is dependent on Asia to finance its massive deficits and foreign wars.

In view of the rapid collapse of US economic potential, my prediction in January 2004 that the US would be a third world economy in 20 years was optimistic.

Another five years like the last, and little will be left.

America's capacity to export manufactured goods has been so reduced that some economists say that there is no exchange rate at which the US can balance its trade.

McMillion reports that median household income has fallen for a record fifth year in succession.

Growth in consumer spending has resulted from households spending their savings and equity in their homes.

In 2005 for the first time since the Great Depression in the 1930s, American consumers spent more than they earned, and the government budget deficit was larger than all business savings combined.

American households are paying a record share of their disposable income to service their debts.

With America hemorrhaging red ink in every direction, how much longer can the dollar hold on to its role as world reserve currency?

The World Economic Forum in Davos, Switzerland, is the cradle of the propaganda that globalization is win-win for all concerned.

Free trader Stephen Roach of Morgan Stanley reports that the mood at the recently concluded Davos meeting was different, because the predicted "wins" for the industrialized world have not made an appearance.

Roach writes that "job creation and real wages in the mature, industrialized economies have seriously lagged historical norms. It is now commonplace for recoveries in the developed world to be either jobless or wageless--or both."

Roach is the first free trade economist to admit that the disruptive technology of the Internet has dashed the globalization hopes.

It was supposed to work like this:

The first world would lose market share in tradable manufactured goods and make up the job and economic loss with highly-educated knowledge workers.

The "win-win" was supposed to be cheaper manufactured goods for the first world and more and better jobs for the third world.

It did not work out this way, Roach writes, because the Internet allowed job outsourcing to quickly migrate from call centers and data processing to the upper end of the value chain, displacing first world employees in "software programming, engineering, design, and the medical profession, as well as a broad array of professionals in the legal, accounting, actuarial, consulting, and financial services industries."

This is what I have been writing for years, while the economics profession adopted a position of total denial.

The first world gainers from globalization are the corporate executives, who gain millions of dollars in bonuses by arbitraging labor and substituting cheaper foreign labor for first world labor.

For the past decade free market economists have served as apologists for corporate interests that are dismantling the ladders of upward mobility in the US and creating what McMillion writes is the worst income inequality on record.

Globalization is wiping out the American middle class and terminating jobs for university graduates, who now serve as temps, waitresses and bartenders.

But the whores among economists and the evil men and women in the Bush administration still sing globalization's praises.

The state of the nation has never been worse.

The Great Depression was an accident caused by the incompetence of the Federal Reserve, which was still new at its job.

The new American job depression is the result of free trade ideology.

The new job depression is creating a reserve army of the unemployed to serve as desperate recruits for neoconservative military adventures.

Perhaps that explains the Bush administration's enthusiasm for globalization.

>Yep, get the non-contaminating version with the black jacket, which is suitable for direct burial. <

In this case, what does "non-contaminating" mean? Does it refer to the inert chemical makeup of the jacket, or does it refer to some electrical property in which signal is able to pass through unaltered (as compared to the "contaminating" type :-/)?

Thanks,
BJ

It's not so much the mechanics of doing it that I see as a problem. I have a candidate 12V tabletop that I may try in that position to see how it works.

I was more interested in the tradeoffs of

o A portable, designed to work with a short antenna, located in a partial Faraday Cage with noise sources

vs.

o A tabletop, working from a barely adequate external antenna away from the noise source.

The issues of proper mounting, power sources, etc are all ones I can deal with.

937. True prediction on SW -- is BPL next?

Newsgroup: rec.radio.shortwave
Date: 2006-02-06 18:15:19 UTC
From: Frank Dresser <analogdial@worldnet.att.net>
Message-ID: <XmMFf.347198$qk4.338845@bgtnsc05-news.ops.worldnet.att.net>
Source record: 61286

As a caller predicted on Joyce and Dave's Power Hour , over a month ago, the Pittsburgh Steelers won the Super Bowl!

The prediction was not an end in itself, but a means to enhance the caller's claim to Insider Globalist Knowledge. He said he was told, not just the chosen Super Bowl winner, but the primary purpose for BPL. BPL isn't actually intended to bring internet access to millions, but it's intended to ruin people's health -- even kill them -- in order for the Globalists to steal their property.

OK, "BPL will kill you" is an extraordinary statement which ought to have an extraordinary level of support to deserve any sort of credibility at all. But, why is BPL still around? BPL has shown little but failure in one trial after another. It hasn't been able to reliably move large volumes of data economically, at least over the long term. BPL stumbles like some canvasback bum-of-the-month, yet it's still treated as a serious contender. Could there really be a hidden adgenda?

A true prediction on SW radio is beyond extraordinary. It may be unique. I'm starting to worry.

I'm sure I have enough tinfoil for a hat. I fear I might need enough for a complete suit.

Interesting. On Saturday, 2/4, 17785 was good at 22:00 and 17795 was good
at 23:00. (They've moved Correspondent's Report/Innovations/Background
Briefing forward an hour for the Sunday/Saturday in N.Am. broadcast).

Have you checked out the new schedule. There's a number of programs that
they've dropped from the Pacific track and only broadcast to Asia, now.
They get a bunch of 15 minute programs (In Conversation, Ockham's Razor,
The Ark, Lingua Franca), and some of the more Austral-Centric discussion
programs (National Interest, Counterpoint), and Life Matters, whatever
it is. While we (for the Pacific transmissions) get the frothy chatter
shows (In the Loop, Breakfast Club). Time to hit their podcast page.
And the Science Show is now at 16:00 UTC on Sunday.

Ditto (an application that does not come native on a Mac and one I've never heard of) has to be installed by the user along with ClamAV (this does not come native on the Mac either). In other words, "ditto" is not a command in Unix BSD nor OS X as a whole.

There are no viruses in the wild for OS X as of this posting - nor have there been since its introduction.

Brenda Ann: You will find that there are lots of posts about "advisories" and "security holes" and if you look into it you'll find that Apple has promtly fixed it (probably before the original posting about it). Of course, if you're running Windows you're used to waiting up to 6 months before they put anything out to fix one of their problems.

Check OS X again.....

Good post Peter. The bottom line that I like to leave these
discussions at is:

If you gotta run Windows, you gotta.
If you don't, you DON'T.

Do yourself a favor and check one out before you throw out your next PC
and repeat the cycle, you will most likely be surprised at how good Mac
OS version Ten is.

One of the reasons BPL is still around is that Google invested $100,000,000
in it. Many Hams and SWLs are boycotting Google because of it.

Geoff.

Actually, I get this advice nearly every day. If you check headers, you'll see that I'm already on it.

Been since 1984, in fact.

I keep a couple of Windows machines around for those websites that absolutely MUST have IE to work, since I have zero MS software on my Macs. But even then, I go no further than Win2k, and they only run 'as needed.'

The Macs are a lot more fun. And move a lot more data in the same amount of time. I get more in 20 minutes in the morning on my Mac than I ever got done in 4 hours on a Windows machine running 3 times as fast.

Lotus was never as flat out fast as Ferrari, either. Still there was a time that Lotus had won more races than all the others combined.

"It's not how fast you go fast...it's how fast you go slow that wins races."

--Colin Chapman.

Now that Macs are coming up to speed at going fast....well...imagine the possibilities.

I'm not in the market for one now, but I'll keep it in mind for the
future.

At the time I bought the 800, it was second only to the Wellbrook for
active antennas. The 900 might surpass it.

Wasn't Kiwa planning to market an active antenna for SW at one time? I wonder if that plan is still in the works. Kiwa's owner appears to be a pretty talented guy. I gotta believe he needs more of a challange than performing receiver upgrades.

If you are basing your decision to use an Apple based OS rather than a
Windows OS because the Apple OS has not had highly publicized hits by
hackers, well go ahead, but be sure to keep whistling in the dark for
comfort. That's a pretty shaky reason to buy one OS over the other.

>

Some are I am sure trying to break the Apple OS as others have
mentioned. But there is so much more publicity and glamour to be
gained by taking down the gazillions of Windows based machines compared
to the relatively few Apple OS based machines that would be effected.

Well, possibly you had not been smattered by exposure to the real world during and after your journalism training. Other than you there is not a person I'm aware of that would claim that their writings are free from bias. It just is not possible to be bias free in writing. It may not be conscious, but it is there.

I listened for a while yesterday on 17675 from 22:36 UTC onward for a
few hours and never heard them. Checking back on 15720 I kept seeing a
carrier go on and off with no audio so I don't know if that was them or
not working on the transmitter.

I also heard them this morning on 9870 and they sounded OK.

The ones I have are not active but I would agree that most are amplified. In addition many have the amplifier as a separate module from the speakers so there is no reason to use the amplifier if the radio can drive them directly.

Rather than using computer speakers I would use a bookshelf speaker where despite a low cost ~ $20 they are often better sounding and just use the speaker jack on the radio. One less avenue for noise to get to the radio would be one benefit.

I say that is entirely wrong. A good reporter knows when he's
spinning and know when he's not. Objectivity is part of being a
professional. People who write slanted stories aren't real news
people.

I caught more of it, first broadcast of theirs i'd been able to check since the summer, and was raring to hear it, considering their stepped-up nuttiness of late.

It was more of the same script: "Bush is corrupt, evil, and war mongering, and he's a stooge of the evil zionist aggressors trying to hold down our peace-loving brothers throughout the world." Yada yada, but still interesting to hear. They did a piece demanding Israel get rid of its nukes (yeah, right: you first) and something about the increasing militarization of U.S. society. Kind of reminded me of Radio Havana, without the sexy dance music.

I also have good luck with plastic budget speakers from cheapo shelf
systems from the thrift store. I have some Aiwa 4'' full range in
jazzy plastic enclosures that sound a lot like the golden age of 5
miniature tube superhets.

Is it worth $40 of your time to mess with it?

White vinegar and a tooth brush.

Rinse with distilled water, then anhydrous alcohol. Let bake in the
sun for a good 6 hours. Light a candle.

It isn't a case if intentionally spinning, lying or whatever. If you
don't believe me then ask a reporter who has been in the business for a
whil. Ask if people carry their own biases and beliefs into their
work.....

Ace:
Thanks for the pics. The radio looks very well shielded. The front panel, however, looks like an RX-320 in a bud box! Geeez that is sparse. Is it menu driven like the 7030?

I have one of the LA-350 loops from AOR. It's no match for the Wellbrooks. It's a good antenna, but it's for indoor use only. That's a profound disadvantage.

It's fairly easy to find an outdoor location for one of the Wellbrooks and it would be trivially easy to find a spot for one of the H-800 antennas, since they're only around 26 inches in length. There's almost always a way to get an antenna outside the house, where it's meant to be!

The LF looks like an amplified whip. I seriously doubt it would be in
the Wellbrook league. Those amplified whip are really noisy, especially
at lower frequencies.

Maybe in the Mojave you can get away with an amplified whip.

I think that Coilcraft, API-Delavan, Pulse, etc. would be surprised to hear them. Although I'd grant you that you don't typically find many air coils in mass-market consumer electronics anymore, they're still used all over the place in industrial and military design... where I work we buy tens of thousands of the things every year for radio receivers!

Plenty of articles appearing in QEX and on-line also use air-core coils, since it's a pretty fast and you can, of course, get whatever value you want with no "minimum purchase" quantities.

I know two people with Wellbrook loops indoors. They work, but look goofy of course. In a home office or radio room, who cares if it looks odd. You need to rig up some support. I use a cement patio umbrella stand that uses ordinary PVC. OSH sells them. I'm not really sure being near the window helps since you are receiving a sky wave, not a signal beamed along the horizon.

I agree that antennas out in the open work best, but HF is not a line of sight reception. Height doesn't make right for HF, at least not for a loop. [Beams would be a different story.] . Of course, outdoors means it won't be close to your noise sources.

I had something kind of odd happen today with my Wellbrook. The strongest BCB station I can receive is on 680. It is so strong that my 7030 kicks in the attenuator. Even with the atennuator, it reads about S+40. Anyway, today, the 3rd harmonic of the station, 2040, showed up in the shortwave band. If I hadn't use the same gear before, I would have blamed the amp (ALA100) or the radio. The harmonic signal was in the mud, maybe S4, but clear enough to hear the station ID.

Wellbrook makes other models that are specifically for indoor use.
They're smaller than the 330 and the 1530 and semi-rigid. I don't know
if they are capable of the same high level of performance as the 330 or
the 1530, but the 330 / 1530 couldn't meet their full potential anyway
if you can really only use them indoors.

And why would this vertical be quieter than any other vertical? Seems
to me you can't fight physics.

Even in a quiet spot, a whip plus fet amp will be noisier than a
magnetic loop due to the nature of the noise sources.

Well, it's a small voltage field antenna that you can locate away from
noise sources outside a building is about all it has going for it from
the conceptual standpoint. From a circuit design viewpoint it must have
a well designed low noise amplifier. The reviews indicate it is a good
performance active antenna but it does pick up local noise sources so
the antennas location must be a quite one.

OK, that makes more sense Those active whips are good for quick and dirty portable use, but a magnetic loop is like magic.

I'd be curious what they use for an amp, since a single fet is par for the course in that product. Those active whips are real high margin products.

The Wellbrook is another story. I think they use a high bandwidth transformer, which is how they float the antenna above ground. North Hills makes those transformers, but they aren't cheap. When the dust settled, I figured buying the Wellbrook made more sense than trying to duplicate one. You can do a differential amp to avoid the transformer, but that increases the noise.

To imitate an old Volkswagen ad: Air doesn't saturate. Well, I guess it
does at some point but that's way past where ferrites and iron powders
do. Today many inductors in receivers are designed around iron powder
cores but when it comes to heavy-duty stuff air cores are the ticket.
Same for really high-Q tuning circuits.

Do you think that SW will become irrelevant and just a platform for political extremists and fundies?.Because as the good services such as bbc world service roll back there service, these people i mentioned are intensifying there efforts and i increasingly hear these people whilst looking around.Because these good services i mentioned are increasingly are becoming Internet-centered.I hate to see this day come because SW is a great medium,i enjoy the diversity of it which sometimes the Internet cant even match.I would hate to see such a great medium to go to waste on these idiots.I think this is the great threat to SW radio and its future,if these people get a foothold in this medium it will give government (im not just talking about china either) to jam SW signals and restrict sales of SW radios, if it gets a reputation as a medium for these people.

DISCUSS!

Yours truly
Adam

Hello Rikk,
I am not sure if you have already decided/purchased etc. Anyhow, I have owned two of the receivers in question, the one I have not used is the Kenwood so I can't give an opinion except that Kenwood make good receivers.
The Target is a nice receiver and for the price (new) is good value. However, if I was to make a choice today I'd buy the Sony. It will do most things well and nothing badly. It's also excellent as a general radio, the FM reception through ear phones is very good. SSB is good too. I used my one with a Sony ANLP active indoor antenna for the SW part of the spectrum and it was excellent, made a big difference. The Sony AN-1 active antenna also made a difference plus it was useful on LW/MW too.
The Target will need an outboard antenna of course while the SW77 will give good results on the whip arial but of course an antenna outside or at least an active one indoors is even better. If you do purchase an antenna instead of making your own then I can sing the praises of the Wellbrook made ALA1530. It's gives full coverage from 1khz to 30mHz and is exceptional.
I had no problems with either receiver and they both lasted me well. I sold them on and to the best of my knowledge they are still working.
Good luck!
Alan

I think SW will be here for a long time to come but you are correct in that major broadcasters are moving away from SW to the 'net but I suspect with the beeb this is more to do with funding than common sense. The beeb is a shadow of it's former self. It went down hill with the appointment of John Birt and as far as the world service goes has they are still rolling downhill fast....
On the bright side I think we'll still have good broadcasting on SW for years to come.
Alan :)

Tom,
Are you sure you heard "packet"? Per all the published reports, it is
only sending voice and SSTV (slow scan TV), which sounds quite different
from packet.

From NASA:

> SuitSat transmits for 30 seconds, pauses for 30 seconds, and then
> repeats. "This is SuitSat-1, RS0RS," the transmission begins,

Better read this before we start discussing that a loop can distinguish
noise sources.
http://www.w8ji.com/magnetic_receiving_loops.htm

I see two reasons why a loop might be quieter:
1. If there is a single noise source, the loop's null may be used to reduce
the source
2. Active whips must have a good ground at the antenna. Without it, the
coaxial shield becomes part of the antenna- both picking up noise in the
house and conducting noise from the house back to the whip.

The trick with a whip is putting it in a low noise location.

My random wire at home is at least 225 feet away from any source of rfi.
An H800 or H900 would work fine back there.

I use an active whip for camping trips and vacations - largely because
they're easy to transport and set up. The one I'm using now is a 3
meter whip that folds like a tent pole with an impedance matching
transformer, and a milspec Avantek low noise high gain amp.

Obviously it's easy to find a quiet spot for an antenna when you're in
the woods.

Fortunately, it's also easy for me to set up an antenna in a low noise
location at the three places I tend to go for vacations and weekend
getaways - and they're good places for swl - perhaps because they're all
on or very near water.

True enough. I had to go to fairly extreme lengths to find a permanent location for the Wellbrook because it was picking up noise. In the end, I needed to locate it in exactly the same spot I'm using the H-800 in now. The Wellbrook is definitely quieter than the H-800, but it's not uncommon for me to make out signals on the H-800 that I cannot make out on the Wellbrook--no doubt for many of the reasons Telemon described (polarization, frequency, time of day, etc.). Don't get me wrong: The Wellbrook is the better antenna overall, but the H-800 doesn't get nearly enough credit in my view. It's significantly cheaper than the Wellbrook and is manufactured right here in the good ole' U. S. of A. I think it's an excellent value.

President Clinton wasn't impeached for having sex with a consenting adult.

He was impeached because he lied about it under oath as part of
defending himself when he was being sued for sexual harassment.

Had he told the truth, some folks would have snickered, some would have
thought "attaboy", and some would have been appalled, but he wouldn't
have been impeached.

Mark asked:

> Tong Tong Ting. Tong Tong Ting?

Well, I heard it as "Tong Tong Tong Ting."

> That's the VOA transmitter in Delano, California
> targeted at Central America stepping on the
> tail of the Montsinery (French Guiana?)
> transmitter targeted at the Caribean.

Maybe I'm remembering Cold War era broadcasts but all the VOA stuff
I've heard had Yankee Doodle at the beginning of the broadcast.

> Up here in Seattle, it stomps the hell out of 5975
> for the last 5-7 minutes of the 02:00 hour,
> when they warm the transmitter up and
> then send the tones. Montsinery has been S9
> and Delano us usually 10 dB stronger.

It's not nearly as bad here on the East Coast - Usually the BBC
broadcast has little to no noticable QRM. Given your proximity I can
see how the situation is reversed!

Now I gotta figure out why I hear number stations underneath several of
the Okochobee broadcasts!
(That's not an easy feat, they are almost local.)

Tim.

Are you just talking about commercial SW broadcasts? If so, my guess is they'll continue to decline, but they're just one slice of the pie. Everything else that we listen to on SW will still be there, and the presence of fewer commercial broadcast stations will, I hope, open up some exciting DX opportunties. This is a good time to be into SW.

Steve

Shortwave is but one of many media used by governments, commercial broadcasters, religious groups, political groups, private individuals and others to get information out to their respective audiences. Shortwave is gradually being abandoned by government and commercial broadcasters because there are more effective, reliable and less costly ways of getting the message out to the intended audience.

I don't know whether the question of whether broadcasting on shortwave is relevant or not because you have to define who it is relevant to. I think it is safe to say that listening to news and music on shortwave is less popular than it once was for many listeners given the limited number of shortwave radios that are produced today.

This topic has come up several times before. I remember one fellow from south america who was directly involved in commercial broadcasting. He indicated rebroadcast signals on MW, FM and increasingly internet were far more reliable and reached a larger audience more consistently than sending signals by shortwave. He got into a long winded argument with some dxers about what those decisions meant for the hobby. His comments were essentially that broadcasts (all media) are targeted at listeners and not collectors of QSL cards.

This is a high-power amateur transmitting antenna. Are you going to use this for HF BCB listening? If so, seems like overkill for the bands for which it's designed...and not especially good for the BCB bands. Having said this, I'd think horizontal would be better than vertical for reception.

If your interest is HF transmission, then I respectfully withdraw from the conversation. Good luck to you on this.

Bruce Jensen.

I might have thought they were impulsively pissing away their excess cash, much as Ford Motor did in the 90s. But that was before The SW Prediction Paradigm Shift. Who knows? Maybe the Googlists are expecting BPL to actually work. No, I still don't think BPL will be able to competitively download porn and pirated mp3s. But nobody is saying DSL will burst your capillaries and nobody is saying cable internet will make you bleed from your eyes.

Fewer radios are built because there are fewer listeners. The only
people in North America who buy SWBC receivers are hobbyists and
religious fanatics. News junkies have moved on to the internets,
satellite radio and the overnight BBC on Public Radio.

Probably so. In many parts of the world, the population is too scattered to be effectively served by AM and FM, and too poor to afford the internet or satellite. The reason the BBC keeps broadcasting English to the Caribbean is because it's less expensive than establishing FM relays in all the former British colonies scattered across the sea. It also has the side effect of getting a couple hundred listeners in the southern US. In the future, there will be less English on SW because most countries that speak English are advanced enough to not need SW.

That's it in a nutshell: SW listeners = Demand for SW radios. There
are far more comprehensive and up-to-date sources of information than
VOA or BBC on shortwave.

I think that shortwave will be used in specific situations, such as: listeners too scattered to be served by AM/FM, listeners too poor to afford computers or satellite dishes. I think that governments like Iran and Cuba will continue to use SW to get their propaganda out since they can't do it any other way. In the US it is very dangerous to your health to frequent jihadi websites; shortwave provides a way to keep up with what the enemy is thinking without having to worry about being tracked and arrested as an enemy combatant.

Indeed. But I can imagine situations where shortwave would be the better choice. In South America, like in North America, people are increasingly abandoning the countryside for the cities, so in that case AM and FM would be better. That is not the case everywhere, and sometimes geography prevents it.

I see. So you're only here to post anti-Bush screeds? Can't you post
those somewhere else, like alt.anti-w? Also, do you know that the BBC on
public radio is a bowdlerized version of the real thing, cut and pasted
to avoid angering the govt?

Other than a 30 second underwriting announcement covering up a Beeb
program promo the stream is pure North American Service (which is
pretty much identical to the Asian service except for East Asia Today.

I didn't say anything about any bushes.

It's a relay of an hour of the BBC, and according to the VT Communications
schedule I downloaded off that Italian web site, it's from Delano. Does
the VOA still run it, or did they contract out the operation of there?

Maybe Family Radio is taking in a bit of CIA money on the side. ;-)

Back about 15 years ago, there was some strange close-in QRM to some of
the stronger BBC signals in the 6 MHz band. In this case it was RTTY,
and even stranger the signal went away when I bitched about it on the
shortwave alt.*? group we used back then.

I always wondered if putting your spy communications close to a widely
received broadcast would be good cover. They couldn't take the spy out
and shoot them for just listening to the Beeb.

I've been doing a lot of beacon hunting the last few nights and I've found an identifier that I cannot seem to lookup anywhere.

The beacon IDs VIN but the interval carrier is prefixed with two dits before the long tone. It sounds like VINI but there's no pause or any appreciable space between the two dits that come before the long interval carrier tone.

In other words:

dit dit dit dah dit dit dah dit dit dit dahhhhhhhhhhhhhhhh

Anyone able to help ID this one?

Thanks!
B.

There's some regular transmissions up around 8 MHz. I bet he's got a
crummy receiver and is picking up an image. I don't think the spooks
would want to stir up a hornet's nest by using a ham band.

The guy from south america indicated that they were using rebroadcasted
AM and satellite downlinks to create local radio stations that were far
more reliable for remote locations. Still there are some people in the
boonies that will be missed under such an approach. I have to wonder
how many of those was out in the sticks really care abut interacting
with the world though. For example those poor people way up in the
mountains of Pakistan who have no interest in leaving their world
probably also have no interest in learning about happenings in
Islamabad let alone the U.S.A. or the U.K.

> In the US it is very dangerous to your health
> to frequent jihadi websites; shortwave provides a way to keep up with

I don't know if the risk is all that great if you are looking for
reliable information. I don't know if the Help Wanted section of a
Jihadi website would be a particularly useful source of information
assuming you could: 1. Find it. 2. Translate and understand the
information. Al Jazeera (my poor spelling) is accepted as a legitimate
(if not agreeable) source of information about a very different world
for most westerners and is available in more than one media but not
shortwave to the best of my knowlege.

Yes, geography prevents line-of-site broadcasts, but it would appear
that alternatives other than shortwave are being pursued for those in
some rural areas.

Radical Cleric Sentenced to Seven Years By TARIQ PANJA, Associated Press Writer
1 hour, 27 minutes ago

LONDON - A firebrand Muslim cleric whose mosque was linked to Sept. 11 plotter Zacarias Moussaoui and "shoe bomber" Richard Reid was sentenced to seven years in prison Tuesday after being convicted of fomenting racial hatred and inciting followers to kill non-Muslims.

ADVERTISEMENT

The jury found the one-eyed, hook-handed cleric Abu Hamza al-Masri guilty of 11 of 15 charges against him, including soliciting murder, stirring racial hatred, possessing a terrorist document and possessing threatening or abusive recordings.

Al-Masri, Britain's best-known Islamist orator, was sentenced to seven years in prison for soliciting murder, the most serious charge. He faced a maximum sentence of life imprisonment.

The cleric will serve his sentences on the other charges concurrently.

Judge Anthony Hughes told the cleric that he helped persuade his followers that they had a "moral and religious duty" to kill.

"You used your authority to legitimize anger and to encourage your audiences to believe that it gave rise to a duty to murder," Hughes told al-Masri.

Though asked to stand for the reading of the verdict, the 47-year-old cleric immediately sat down once the first guilty verdict was read out.

A supporter in the public gallery shouted "God bless you, Sheik Hamza!" as the cleric was led out of the courtroom. Others shouted to him in Arabic.

The cleric's attorneys said he planned to appeal. Muddassar Arani said al-Masri believed he was "a prisoner of faith, and this is a slow martyrdom for him."

Al-Masri was the former imam at London's Finsbury Park mosque, which gained notoriety through his fire-and-brimstone preaching and links to terrorist suspects Reid and Moussaoui, who admitted in April that Osama bin Laden ordered him to train to fly a jetliner into the White

House. A U.S. federal court is now picking a jury that will decide Moussaoui's sentence.

Authorities in Britain and the United States claim al-Masri was at the center of a web of terrorist activity from the 1990s until police raided the mosque in 2003.

Al-Masri has been charged in the United States on an 11-count indictment with trying to establish a terrorist training camp in Oregon, conspiring to take hostages in Yemen and facilitating terror training in Afghanistan.

Under British law, the domestic charges took precedence over the extradition case, although he could now be sent to the United States to stand trial there.

The cleric, who claims to have been maimed fighting Soviet troops in Afghanistan, became a high-profile radical and a hate figure for British tabloids, who called him "Hooky" and "Dr. Hook."

He called the Sept. 11 attacks a Jewish plot and the invasion of Iraq a war on Islam.

After he was expelled from the mosque by administrators in 2003, he led Friday prayers on the street outside until his 2004 arrest on a U.S. extradition warrant. He has been detained in the high-security Belmarsh prison ever sense.

Al-Masri, whose real name is Mustafa Kamel Mustafa, faced 15 counts, including nine of soliciting the murder of others, "namely a person or persons who did not believe in the Islamic faith." One of the charges on which he was convicted added: "in particular Jewish people."

He also faced four counts of using threatening or abusive language designed to stir racial hatred, one count of possessing threatening or abusive recordings and one count of possessing a document likely to be useful in terrorism ï¿½ the "Encyclopedia of the Afghani Jihad."

He denied all charges.

During the trial, which began Jan. 11, prosecutor David Perry said the cleric had preached "terrorism, homicidal violence and hatred" in sermons and speeches, many of which were recorded and played in court.

"The defendant was a recruiting sergeant, a recruiting officer for terrorism and murder," Perry said.

Prosecutors said police found 2,700 audiotapes and "a large quantity" of videotapes when they searched al-Masri's west London home in 2004.

Some of the tapes played for jurors had al-Masri praising the deadly October 2000 attack on the warship USS Cole and the sinking of the Russian submarine Kursk, calling Jews "blasphemous, traitors and dirty" and telling followers: "Islam will never be dear to your hearts

unless you sacrifice for it, until your blood comes out for it, your teeth get broken for it, you have enemies because of it."

Perry also quoted al-Masri as saying the Jews' behavior was "why Hitler was sent into the world."

During the trial, al-Masri took the stand and denied any involvement in violence, but said he condoned suicide bombings in some cases. He said he is only a spokesman for political causes and the case against him was politically motivated.

One of al-Masri's lawyers, Edward Fitzgerald, told jurors that although some of what the firebrand preacher had said was offensive and "a bit over the top," he was not inciting others to kill.

But British police say he was a central figure in a web of planning for violence.

When detectives raided the Finsbury Park Mosque in January 2003, they found chemical warfare protection suits, blank-firing pistols, a stun gun, gas masks, handcuffs and knives that police believe may have been used for terrorist "training camps" in Britain.

Attorney General Lord Goldsmith, the government's chief legal adviser, welcomed the verdict, saying that while free speech was important, "encouraging murder and inciting hatred against others because of their race will never be tolerated."

But a Muslim leader said the verdict would trouble some.

"This is creating an environment that can only further alienate the Muslim community," said Massoud Shadjareh, chairman of the Islamic Human Rights Commission.

A couple of weeks ago,I read that the Governor of North Dakota wants to use three blimps so the whole State of North Dakota can have cell phone service.The blimps would be much less expensive than putting up more cell phone towers.I don't know if a similar set up would work for Shortwave listening out in the Country.

Don't get upset with the evangalists and political talkers. These guys are on SW because they want to broadcast on SW. If SW is becoming "irrelevant", it's because the "good services" don't think SW broadcasting is worth the money.

And the medium will not go to waste. It will be used by those who want to use it. Sure, those who want to use SW might be end timers and conspiranoics. So what? The medium will be there for ANYONE who wants to use it. Time on the US SW broadcasters is available. If you wanted to, you could broadcast your own recordings on SW radio.

And I really doubt a foriegn country would bother jamming the likes of Brother Stair and Alex Jones. I'm sure they have practically no listeners in non-English speaking countries.

The "idiots", as you characterize them, are doing no harm to SW radio. You're free to ignore them, and there's no need to waste any anger on them. If you want to be upset with any SW broadcasters, think about those who are abandoning the media.

hello to all SRIII owners, I just bought another one after losing my first one to campsite thieves two years ago. I cant remember if my first one had this little annoyance, but this new one has a "pop" from the speaker when the power button is pressed. A buddy says his does this too, but Im wondering just what the average rate of occurence of this is. Surely not all of them. Does your radio have this, or is it free from this?

Leave it turned on all the time and use the power cord to power on
power off.

1117. MFJ 1045C Preselector....oh, and the 1020C, too.

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 00:04:47 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1139357087.816333.136820@z14g2000cwz.googlegroups.com>
Source record: 61566

Does anyone have one of these 1045C units? If so, how is the performance? I was looking at the 1045C listing on Grove's website, and it says, "Connect 2 antennas, 2 receivers". Looking at the front panel, however, this unit does not have any receiver A/B switch or antenna A/B switch. In fact, putting frequency coverage issues aside, the unit looks a lot like the 1020C active antenna (minus the hole for the 1020's whip).

Does te 1045C really have provisions for connecting 2 antennas and 2 receivers? I can't seem to find any image of the back side of the unit.

Anyone know how the performance of this unit would compare with that of the 1020C if connected to a 20 or 30 foot length of wire?

Best,

Junius

1118. Snow / Disconnecting Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 00:21:38 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1139358098.114973.182010@g44g2000cwa.googlegroups.com>
Source record: 61567

Hello folks,

I've read for many years of how one should always disconnect the antenna when it snows. I'm curious, though, as to why snow is something that would be of particular concern. I guess the concern over thunderstorms seems straightforward enough...that lightning strikes, even at some distance away, can result in significant, potentially damaging static voltages in the antenna. But does/can atmospheric conditions during a snow result in this same sort of phenomenon?

As an aside, related or perhaps not, in the areas of the U.S. in which I've resided, I've only lived through one thunder-snow.

Anyway, just wondering about that.

Junius

1119. Antenna Directionality

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 00:39:36 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1139359176.481745.58300@g43g2000cwa.googlegroups.com>

Hello folks,

Now as I understand things, with a relatively short sloper antenna for HF, the antenna will be pretty much omni-directional. At what length does an antenna begin to have directional characteristics?

Thanks in advance for any help...

Junius

1120. Another Islam Beheading

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 00:44:00 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11uifokd748qu79@corp.supernews.com>
Source record: 61570

No document or ideology of Western culture teaches lies, murder and complete subjugation as does islam.

"In the seventh century of the Christian era, a wandering Arab of the lineage of Hagar (mohammed) , the Egyptian, combining the powers of transcendent genius, with the preternatural energy of a fanatic, and the fraudulent spirit of an impostor, proclaimed himself as a messenger from Heaven, and spread desolation and delusion over an extensive portion of the earth. Adopting from the sublime conception of the Mosaic law, the doctrine of one omnipotent god; he connected indissolubly with it, the audacious falsehood, that he was himself his prophet and apostle. Adopting from the new Revelation of Jesus, the faith and hope of immortal life, and of future retribution, he humbled it to the dust by adapting all the rewards and sanctions of his religion to the gratification of the sexual passion. He poisoned the sources of human felicity at the fountain, by degrading the condition of the female sex, and the allowance of polygamy; and he declared undistinguishing and exterminating war, as a part of his religion, against all the rest of mankind. THE ESSENCE OF HIS DOCTRINE WAS VIOLENCE AND LUST: TO EXALT THE BRUTAL OVER THE SPIRITUAL PART OF HUMAN NATURE&#65533;Between these two religions, thus contrasted in their characters, a war of twelve hundred years has already raged. The war is yet flagrant&#65533;While the merciless and dissolute dogmas of the false prophet shall furnish motives to human action, there can never be peace upon the earth, and good will towards men&#65533;

John Quincy Adams
President of The United States of America
1830

During its height, while not completely pluralistic the Islamic Empire was far more accommodating to Christians and Jews then the so-called Holy Roman Empire was to its minority religions. More importantly, Muslim scholars took to the works of the ancient Greeks, Aristotle, Ptolemy, Diophantus, etc. and extended them as Europe lay to be found centuries later, giving rise to the Rennaissance and the Reformation which culminated in the Enlightenment, the bedrock of modern western values. So Islamic civilization took off in part because of the knowledge it absorbed from Western civilization, even as the latter had declined precipitously. Then later the two switched roles with the West reclaiming its lost secrets in part from Islam as it regressed into the shadow of its once great Empire. Now we are doing the same as before and imparting to them the institutions and knowledge which will help them flourish once again. But if we are to do this without falling into darkness again, we must stand firm against those who pull us back from centuries of development. We can not let them play off of our tolerant sensibilities, pretending to be victims of persecution even as they persecute others different from themselves, Muslim or not. We must also do a better job of

pointing out that the ideals of the West need not be antithetical to those of Islam as indeed our shared history proves.
...
Either freedom of thought makes inroads into the Middle East or it must be curtailed in Europe.

1128. Par Electronics EF-SWL Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 01:02:28 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1139358595.897030.15400@g43g2000cwa.googlegroups.com>
Source record: 61576

Hello folks,

I have a question here... I recently bought one of these excellent Par Electronic EF-SWL antennas.

As the supplied radiator can be disconnected and another wire be hooked onto the 9:1 transformer, I was thinking to give a go at hooking up a 150 foot length of wire that I have on hand. My question is this: in hooking up an alternate wire to the transformer, would the antenna lose its characteristics as a 1-30 MHz antenna? Would an antenna tuner then be required?

Very curious for info on this. I'm afraid I don't know too terribly much about antenna theory.

Thanks in advance for any help provided,

Junius

Where are you located, and when did you hear the identifier? I'm wondering if the identifier is correct-- it seems like "VIN" from what you describe, but I can't find anything close to that near that frequency.

Hi,

Give Dale P. a call at PAR.
He's been really good about answering questions.

But, please also post his answers here, so we all can learn.

I'm about to buy one also.

Bob

From Wikipedia, the free encyclopedia
Jump to: navigation, search
Reactionary (or reactionist) is a political epithet typically applied to extreme ideological conservatism, especially that which wishes to return to a real or imagined old order of things, and which is willing to use coercive means to do so. The term is primarily used as a term of opprobrium (groups rarely identify themselves as reactionary), meant to assert the idea that the opposition is based in merely reflexive politics rather than responsive and informed views. More specifically, the term "reactionary" is frequently used to refer to those who want to reverse (or prevent) some form of claimed "progressive" change. (An equivalent term would be regressivism. The term reaction is sometimes used as a general term for the program or philosophy of designated reactionaries.)

It was coined in the context of the French Revolution to refer to those who wished to restore the conditions of the Ancien Rï¿½gime. Through the nineteenth century, it was used to refer to those who wished to preserve feudalism or aristocratic privilege against industrialism, republicanism or classical liberalism. Marxists used the term in a dialectical sense to refer to those who resist revolutionary change whether they be the conservatives who opposed the liberal revolutions of the eighteenth and early to mid nineteenth centuries or those in the bourgeoisie and their allies who opposed socialist demands for power to be given to the working class and particularly those who resisted socialist revolution.

The same bourgeois who is a "revolutionary" in one context could be considered to be a "reactionary" in another, as the bourgeoisie refers to an intermediate upper-middle class who thrived on service, but not absolute loyalty, to the aristocracy.

Static electricity is caused by the snow hitting the wire. If you use
an unbalanced transformer on your antenna and the low side is
grounded, you're OK. The good radios have an UnUn built-in.

Hi, folks.
as a new member I want to inform you, that I have been in
correspondence with TaoQ since I received the Degen DE31 Short Wave
Active Loop Antenna a couple of months ago.
I was very positively astonished at its performance, and after writing
a few emails to TaoQ, he sent to me the new TG33 AM/MW Band Active Loop
Antenna to be tested.
I performed a few tests using my TEN-TEC RX340 HF DSP RECEIVER, and I
must admit, that it was the best proximate antenna, I ever had in my
possession. I am a 68 year old veteran DX-listener (since 1970) and a
keen antenna builder myself, but never managed to construct anything
near as good antenna, as these two miniature aerials are!
I have built a few antenna amplifier kits and A.T.U.:s, but as they
facilitate the readability a lot, I now have the possibility to receive
more clear signals than ever before!
It may be possible for you, if interested, to contact TaoQ by email at:
tquchina@yahoo.com. Tell my regards to him, please.
Aimo Ruoho, aimountoolaviruoho@gmail.com, or shorter:
aimounto@yahoo.com, or aimoruoho@hotmail.com
73, Aimo

To Lucky: Degen has the DE31 Short Wave Active Antenna, too, for you to try for USD 16,90! You will find it in ebay, also, if you have the interest.
I have it . I tested it yesterday on my roof on the fourth floor of my row house. It is the 1! It is working about as well in my listening room... A big surprise to me, really!

Far to expensive for what it does (and doesn't).

Stick with the wire.

And for what it's worth, it's best to avoid products by RF Systems.

It would help to know the exact model, but from what I could see from the website, this is similar to the Palomar end-feed baluns, though you can transmit on the Par Electronics version. The performance should be similar to a long wire, but more efficient since the transformer will improve the match.

Since you are not transmitting, more wire will probably improve the low end reception, though most of those ham baluns don't work well in the AM BCB or lower.

225ft from any noise source. Great .Let's see. I could buy the 3 homes across the street, 3 behind me, and the homes on either side, then tear them all down. So that's 8 homes at about $650k each, or $5.2 million.

No, I think it's better to spend a bit more and get the Wellbrook.

Interesting thing about this particular beacon's modulation. It appears
to be VIN with a peculiar dit-dit jammed right in front of the interval,
but this is not the case. It's an AM carrier with the upper sideband
only. This causes you to hear on 416.23KHz in LSB:

di di di dah, di dit, dah dit, di di dahhhhhhhhhhhhhh
(VIN nor VINI can't be found anywhere in anyone's LF logs)

but in USB on 416.00 you hear:

dah di di dit, dah di dah, di dah di dit

which is listed as BKL, 416KHz, Cleveland, less than 200 miles away.
(this makes a lot of sense!)

One less mystery for the books.

Or maybe you have the space for, say, a 100 ft wire? The Wellbrook is a great antenna, so long as you find a quiet spot for it. In general, though, I would trade it for 100 ft of wire in a quiet location.

My yard measures 170 feet,front to back and 60 feet side to side.Or is it 160 feet front to back and 70 feet side to side? I forget,I did measure it off a bunch of years ago.Of course I could run an overhead wire diagonaly from Southeast to Northwest or Southwest to Northeast.I dont think those two single women next door to me would mind if I ran an overhead wire from my yard across their yard and I could double the lenght of overhead wire.Those people who live on the other side,next door to me probally wouldn't mind either.I could triple the lenght of overhead wire and I dont think those people who live next door to those two single women next door to me,two houses down the street from me would mind all that much either.The possibilities are endless around here.

It's an AMG-502M. It's a 15v preamp, but I run it (and my 7030+) on
14.4v nimh battery packs.

Gain is 30db. It's rated for 5-500mhz but I generally dial in some
attenuation on the radio below about 5mhz because it's still got more
gain than you need (or want) down there.

1166. Drake R7 problem found

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 04:46:58 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <mLydnTohquVc6nTeRVn-vQ@comcast.com>
Source record: 61512

I found the problem with my Drake R7 with blank display. First of all, the display board does have other problems. I ordered a new DR7 board from that Charlie fellow on the east coast, and when I installed it the display was still blank.
Now, there are two signals that come from the VCO board. One of them is the 1st LO signal; a frequency counter confirmed that the system does lock, in addition to being able to receive signals in the first place.
Here is where the plot thickens.....there is another 3-pin Molex connector that mates with the DR7 board. This provides the 500kHz gating signal for the frequency counter portion of the circuit. This signal originates on the Translator board and is connected through the motherboard to the VCO board. This signal splits into two paths; one path is applied to the reference port of a 4046 phase detector while the other path is applied to that 3-pin Molex connector on the top of the VCO board. Since the PLL does lock up properly, we know that the 500kHz signal is present on the VCO board itself and it is getting to the input of the phase detector.
I didn't see this signal on Pin2 of the Molex connector so I applied a 500kHz square wave signal to the input of the 4017 divider chip that is supposed to be getting that signal. When the display started working, I realized that I had a broken connection on the VCO board.
Close inspection under a stereo microscope revealed that the contact in the 3-pin Molex connector had become unsprung.
When I received this unit, the connector was mounted crooked so I removed the solder from the pin connections and reseated the connector. Now, if I can either re-center that spring contact or find a new connector, I will be in business!

Pete

Snow flakes can and do carry static charge. This is transferred to the
wire and voltage builds up until discharged.

It will happen at a high frequency. What frequency it happens at depends
on:

1. How long the wire is.
2. How high above ground it is.

Just give it a try and see if it works well for you.

The impedance of the wire is determined by its diameter and height above
ground not the length. The 9:1 UNUN is a good choice.

1176. Re: Odd identifier heard on 416.23KHz LSB ?

Newsgroup: rec.radio.shortwave
Date: 2006-02-08 05:41:18 UTC
From: miso@sushi.com
Message-ID: <1139377278.875337.182340@g44g2000cwa.googlegroups.com>
Source record: 61524

I have a few tips. One might be to run ARGO
http://www.weaksignals.com/
This program help to see the Morse code though all the noise.

Second, if you have a CW filter, you can try to tune off the carrier, i.e. where the Morse sideband is heard, around +/- 800 hz. If you have pass band tuning, this is easier as you just tune to the carrier, then shift the passband +/- 800 hz for US beacon, or 400Hz for Canadian beacons.

If you run ARGO, don't use the CW filter. I've found the display to be clearer just using a 2khz filter.

The long "dahhhhh" is Canadian.

An "undocumented" beacon just south of your beacon is at 414Khz, PYD, somewhere on the Nevada Test Site or maybe Area 51. It's one of a few beacons not documented. The others are 278, XSD, at the Tonopah Test Range, and 209KHz at Basecamp.

Bob wrote:

The beacons are sometimes not on the even KHZ, but it would be 0.51khz
off, such as 414.510. Databases like airnav.com do not show this
offset.

Bob wrote:
> Interesting thing about this particular beacon's modulation. It appears

I've run my radio from a gelcell where the closest noise source is the farting of one of those poor cows that live in the high desert. I've done the long wire, long wire plus Palomar magentic balun, and the Wellbrook, all in the same "dxpedition." It's not even a contest. The Wellbrook is much quieter. Finding trees worth a damn to string an antenna in the high desert isn't easy. I had to go to a spot that had those junipers you see around the 6000ft level. BTW, I used ceramic insulators for both long wire setups.

Somewhere around 40 to 60ft of wire on the Wellbrook ALA 100 is the magic spot.

sdaniel13@nyc.rr.com wrote:

I have no doubt if Al Gore was president, the 9/11 event would have
been "contained." There was no surprise about the use of airplanes
crashing into buildings. There were 8 documented cases prior to 9/11
where this was the goal of terrorists. The most blatant was the G8
conference that Condi Rice attended in Italy. The Italians had set up
SAM sites to protect the conference from airplane attacks.

If you don't believe me about the SAMS, here it is from the CNN
website:

About 15,000 police are on duty as part of the $110 million security
operation. Surface-to-air missiles, fighter jets and naval ships form
part of the security operation, which is also responsible for defending
the summit from attacks by terrorists.
http://archives.cnn.com/2001/WORLD/europe/07/20/genoa.protests/

This was dated July 21, 2001. So Condi attended a conference where
surface to air missiles were set up to protect it from airplanes
crashing into it, yet that lying sack of shit said she never dreamed an
airplane would be used as a weapon prior to 9/11. Then again, the
corrupt GOP leaders let her testify without being under oath, so it
was OK for her to lie.

I was able to remove one of the ground contacts and place it in the middle
position. Since those pins are both at ground potential, I used a wire
bridge on the connector end of the VCO board. The unit is working ok now.

OK, but according to NASA, it can't be from SuitSat--they aren't sending packet. There is a guy north of me that has a packet beacon on 145.990 (heaven only knows why) and there may be other *terrestrial* packet stations around the country that are getting repeated on 437.8

Just out of curiosity, what is your location and do you have a TNC and software that would allow you to decode the packet transmissions?

Great bit of sleuthing Pete- thanks for sharing.
I had a problem with my R7 unlocking at low freqs- wish I could recall the
fix- too many years ago, but it was also a devil of a problem to locate.

I'm curious how you think 9/11 would have been contained.

The Clinton administration he was part of didn't seem to be gifted at predicting and preventing terrorist attacks.

I can believe our response would have been contained - he'd have sent a few cruise missiles and saved the rest for the attacks that followed.

Ah, the ALA-100...I don't have any first hand experience with the 100.
I would expect it to be a better performer than the 330S, though, since
it's Wellbrook's "large aperture" antenna. I suspect it would be better
than an ordinary random wire. Sounds like fun.

Hi Junius et al,

There is no magic about the 45' length. It is a nice tradeoff between
performance and ease of deployment. The military also had a bit of a say so.
Anyway, the transformer looks good to well below MW, so that is not an
issue.
The longer length, as one poster suggested, will improve MW performance. If
the antenna is high (in terms of wavelength) a number of nulls (in addition
to multiple gain lobes) will be seen at HF. Neither is very useful as the
antenna cannot be rotated.
Some receivers may overload with the increased signal strength from MW.

One of ther nice features of this antenna is the fact that both secondary
(antenna side) and primary (coaxial feed side) grounds are separately

available on 10-32 stainless studs at the matchbox. They come supplied from us with the two grounds strapped together. This may or may not be the optimum configuration for your location and noise sources- experimenting with the grounding, as detailed in the manual may make a much bigger difference in S/N than increasing the wire length.

GL,

Dale W4OP

There were people trying very hard to blow shit up on the 2000
millenium. Under Clinton we knew this because we had intel and
Clinton made it a top priority and held a all-dept-heads meeting for
FAA, FBI, etc daily to share information and emphisise the serious
nature of the the threat. One consequence was that the troops in the
field were on notice. This meant that when that Bad Guy tried to cross
from Canada he was noticed by a Customs office and caught.

Under Bush, the FAA had 50+ intel warnings in the spring and summer of
2000 and this seems to have been vener shared or acted on.

Priot to 9-11 Bush was given a Presidental Daily Briefing titled
"Osama Determined to Attack in US" and did nothing with it.

Citation provided if you birds don't already know this stuff.

The specs on the HAM baluns don't go into the AM BCB .Of course, that doesn't mean they won't work, but how well they would work is the question.

Incidentally, the Wellbrook ALA-100 works as low as 24Khz. There are two data signals out of Washington state, approx 24khz and 44khz, that I can pick up with about 40ft on the ALA100. I think the spec limit is 150Khz, so performance is probably less than optimal. Of course, there is nothing really there to receive beneath 150Khz, though there are signals to detect.

How quickly you forget the thwarting of the Millenium bombing and
Bojika. The Clinton Administration did prevent some terrorist attacks,
though Oklahoma City blind sized the feds.

Bojinka wasn't all that different from 9/11. Had Condi (I don't take
oaths) Rice been doing her homework, she would have known that (Doh!)
planes can be used as weapons.

The ALA100 is a roll your own Wellbrook. They sell the amp, you come up
with the wire.

I've run one ALA 100 scheme with a suare loop 11ft on the diagonal.
Obviously not suitable for indoor use. I have a wire holding scheme now
that uses a 5 ft on the diagonal form with 3 loops of wire. The
performance is quite good. This seems to be all the inductance the ALA
100 can handle. I think you get a LC filter with the ALA100, with the C
of the amp and the L of the wire. Too much inductance will put the
resonance in the HF band.

This 3 loop scheme gets good perfrmance on AFN out of Hawaii, though
the noise is higher than I care for. I think another turn or two would
do the trick, but I have to compute the requires "depth" of the coil to
keep the inductance the same as the 3 loop scheme. A larger loop is
generally the best solution if you have the space as it has the least
self inductance (no mutual term).

I had thought the null woould be worse with multiple turns. I don't
believe this is the case. In fact, the null is sharper, which actually
makes it harder to find the null.

Hi Rikk:

Schedules of english-language broadcasts are available on www.primetimeshortwave.com . Also you should learn what the broadcast bands are, as those are the frequency ranges where broadcasts can be found. This makes scanning easier. Check out this page: http://en.wikipedia.org/wiki/Shortwave

and scroll down to ITU Frequency Allocation.

Also feel free to ask any other questions if you need more help.

I don't recall the Clinton administration being involved with Bojinka.
Didn't that one fall apart after one of the terrorists set his kitchen
on fire?

In 1993 we had the World Trade Center bombing.

There were a variety of terrorist attacks on US interests overseas
during his term.

My intent isn't to be critical of President Clinton for failing to
thwart these attacks. I do wish he'd made a more forceful response.

On the other hand, I wonder how you feel about President Bush
authorizing wiretaps of phone calls people in the US have with overseas
people identified as being with Al-Qaeda?

Bojinka refered to a plan to hijack a bunch of jets and fly them into buildings. The good guys took this info and other info about plans to blow something on on New Years and kept everyone on a high state of alert starting in late 1999. This may have contributed to a customs agent being alter enough to catch the guy trying to cross from Canada with a trunk load of explosives and plans to blowe up something at the LA Airport.

David,

You are correct that "Global Climate Change" is a concern
for All Humanity and All Living Beings and Things on this Planet.

Global Climate Change is a natural occurrence that occurs
in random cycles throughout the Life of a Planet and the
Life of a Sun.

GLOBAL CLIMATE CHANGE IS VERY REAL [.]

However, Global Climate Change is not the same as the
Pseudo-Science Theme of "Global Warming" which that
Tries to put the 'cause' of Global Climate Change on the
current Activities of Mankind.

Global Warming "The Weird Science" of the Environmental Wackos !

In the Reality of Global Climate Change Mankind's Role of
"Global Warming" may only be the Speck-on-the-Gnats-Ass
(Less Than 1% of the Real Total Assignable Causes.)

ST. PETERSBURG, Russia, Feb. 7 (UPI) -- A Russian astronomer has predicted that Earth will experience a "mini Ice Age" in the middle of this century, caused by low solar activity.

Khabibullo Abdusamatov of the Pulkovo Astronomic Observatory in St. Petersburg said Monday that temperatures will begin falling six or seven years from now, when global warming caused by increased solar activity in the 20th century reaches its peak, RIA Novosti reported.

The coldest period will occur 15 to 20 years after a major solar output decline between 2035 and 2045, Abdusamatov said.

Dramatic changes in the earth's surface temperatures are an ordinary phenomenon, not an anomaly, he said, and result from variations in the sun's energy output and ultraviolet radiation.

The Northern Hemisphere's most recent cool-down period occurred between 1645 and 1705. The resulting period, known as the Little Ice Age, left canals in the Netherlands frozen solid and forced people in Greenland to abandon their houses to glaciers, the scientist said.

Huh? here are the G8.

Canada
France
Germany
Italy
Japan
Russia
United Kingdom
United States

We now know that the UK knew that Bush was "fixing the facts" to
justify an invasion. Germany was telling the CIA that the guys we
were using as witnesses to WMDs were idiots looking for a visa.
France and Russia knew that Saddam didn't have anything that was a
risk. Canada said we were wrong.

Bush got 52 warnings in 2001, just about aircraft hijackings.
Ashcroft refused to ask for a warrant to search Moussaui' notebook
computer. Other FBI field offices were also reporting suspicious
activity concerning Arabs and flight schools.

Bush ignored the warnings because he wanted a new Pearl Harbor to
scare Americans into going along with his fiendish pllot to rule the
world.

I have an old Popular Science magazine somewhere around here which dates back to around 1960 or 1961.There is a picture on the front page of New York City,every inch of New York City all the way up past those buildings solidly encased in ice,and there is an article in the magazine about is another ice age coming soon? Another one of my old Popular Science magazines from around 1960 or 1961 has a real picture on the front of the magazine of when they got a heck of a lot of snow in New York City and Boston and all those cars completly covered over with snow,and an article in the magazine about all that snow they got and more pictures.Dorchester,Massachutesetts was locked down with all that snow.Traffic in New York City and Boston wasen't hardly going anywhere.

No, this was a seperate FSK signal. One interesting effect was when they
tuned it to straddle the carrier of the audio broadcast.

Ok, this one is for servers but usually that means the laptop uPs will
be pushed higher as well. Then the bloatware bloats some more, to fill
that new uP with work. Now the runtime of a laptop will go from the
already pathetic 1.5hrs to a half hour or so. 5 minutes of that will be
required for the boot process, another 5 minutes for shutdown. Leaving
about 20 minutes to play solitaire.

I've heard on several occasions a very strong (S9 to 20dB over S9 in mid-atlantic US) CW transmission on 10125 kHz with 5-letter groups, separated by BT's and AR's. Speed is probably 10 or 15 WPM. Hours are sporadic but it happens most often the middle of the night (like 0500 through 1000 GMT).

Is this some sort of scheduled code practice transmission, or is this a variation on the "numbers stations" coded messages?

I have no problem with wire tapping with a warrant. Just use the FISA
court.

Some think the Bojika fire was "set" to gain access to the suspects and
belongings. There is plenty of Bojinka information that is not
released.

The 1993 bombing is what made Clinton obsessed wit UBL.

Turn down the CPU speed, and stop using it to watch DVDs. D'oh!

Also, carry a battery booster battery pack, or an additional
battery.

So why didn't I have to do that on my old Compaq? I didn't even have
Li-Ion, just a plain NiCd. I could have bought a high capacity NiCd to
yield a couple hours more but 5hrs was plenty so I didn't.

Dunno. I get about 4-1/2 hours from my Thinkpad T42p, if all I'm doing is typing or reading. That's in XP--OS/2 and Fedora Core 4 both come in at about 3 hours, because they don't understand all the latest ACPI stuff.

Cheers,

Phil Hobbs

Actually, these advances may improve run time by reducing power consumption.
Yeah bloatware is a real problem, and somebody has to put a lid on this.
I had
hoped Linux would be the sane voice, but they are going the bloat route,
too.

Fuel cell developments are getting pretty close, in fact you can
actually buy
a fuel cell add-on power source today, but it is more expensive than the
laptop.
That is going to change as they go from extreme gadgets to mainstream. The
FAA still has some concerns about people carrying bottles of 100% methanol
around on planes. TSA hasn't even heard about this yet, but they will

have their
say, I'm sure.

Jon

That gives me hope that they'll learn the ropes again. Although, in the good old days you didn't have to buy a high end laptop to yield that much runtime. Mine was a bottom of the line Contura 410, monochrome screen and 66MHz max clock speed. Did all I do today, Word, CAD, SPICE, databases, Internet, email and the occasional C compilation.

I bought a used Compaq laptop (366 MHz) with *no* battery, so I use a
12V jumpstart battery plus a 75W inverter, and plug the laptop cord
into the inverter. Lasts for hours. Never left it on long enough to
time it, though.

Was *really* nice when we had a blackout. I used the laptop to check
the local news websites (phone line still worked) to see what the
problem was. Just a blown power transformer - no nuclear attack.
Whew.

"David" <rickets@knac.com> is a useful idiot

Antwar.com Editorial Director Dennis "Justin" Raimondo is a Neo-Fascist

http://www.discoverthenetwork.com/individualProfile.asp?indid=1894

Runs the website Antwar.com

Presents the Ba'athist party-states in Iraq and Syria as victims of the malicious West

States that September 11 was "an enormous defeat for the U.S.," and thus the source of President Bush's alleged "fascism"

Believes that the Great Satan is America, and the Little Satan is Israel

Author of The Terror Enigma, a pamphlet that insinuates, with no serious evidence, that the Israeli government had prior knowledge of 9/11 but failed to warn U.S. authorities

Dennis "Justin" Raimondo is a minor celebrity in the U.S., thanks to a 10-year career as an amateur demagogue in the libertarian milieu of the San Francisco Bay Area, a political environment where anything goes and nothing matters. He has the familiar personality traits of the type: "sentimental formlessness, absence of disciplined thought, ignorance combined with gaudy erudition." He poses as a conservative but runs a website, "Antiwar.com," that features anti-Americans like Noam Chomsky and is hugely popular with the left - not surprisingly since it views America as an incipient fascist state.

Raimondo is a confused and confusing person, who seeks to be the master of the confusion he creates. Born plain Dennis, he renamed himself Justin, while attending the Cherry Lawn School, a defunct prep school in Darien, Conn., which he graduated in 1970.

Raimondo unquestionably encompasses many contradictions. Now past 50, he features a photo of himself on his website with a cigarette dangling from his mouth, in a fey (and failed) pose as an homme fatale. He is flamboyantly gay, but promotes himself as a Buchananite conservative and was in fact Buchanan's San Francisco campaign spokesman during the "culture war" that other gays took personally, many elections ago. The entire package is deceitful, and it is a calculated deceit.

The movement that Raimondo has cobbled out of opponents of the Iraq war, who are drawn into his site, is unabashedly fascist. Justin Raimondo personifies an American "red-brown" alliance, like the one that surfaced briefly in the 1930s when Communists and Nazis combined forces to bring down the Weimar

Republic. This alliance was revived after the fall of Russian Communism, when Stalinists and fascists around the world united on an old platform - war against the Jews - of which more will be said further on.

Raimondo's own understanding of fascism - a word he himself throws carelessly around when defaming political enemies and disarming potential critics -- is utterly superficial. In a preposterous column titled "A Fascist America," (March 3, 2005), he defines fascism as follows:

1) "The idealization of the State as the embodiment of an all-powerful national will or spirit;

2) "The leader principle, which personifies the national will in the holder of a political office (whether democratically elected or otherwise is largely a matter of style);

3) "The doctrine of militarism, which bases an entire legal and economic system on war and preparations for war."

Of course. applied to America this is absurd. Outside the neo-Nazi fringe, no Americans, least of all Republicans, idealize the state. The "leader principle" is not only not in evidence, it is almost absent in a political season when the President has been attacked more viciously than any chief executive in memory; and it is pretty difficult to refer to American "militarism" when the country's security rests on a military that is voluntary and under attack. In the same column, while attempting to draw a parallel between opponents of the anti-war crowd and fascists, Raimondo even lends credibility to Hitler's fairy tale that the Nazi seizure of power was a response to "the imminent danger of Communist revolution" - a particularly absurd assertion since the Communists actively colluded with the Nazis in their attacks on Weimar's democracy and passively supported Hitler's accession to power.

In an attempt to smear America even further (as if that would be possible) Raimondo throws in Augusto Pinochet, the left's favourite example of an American puppet. But Pinochet never idealized the Chilean state, or promoted a cult of himself as a leader, or prepared for war or waged war against any foreign country, as required by Raimondo's fascist model. Pinochet even organized a democratic referendum that removed him from power. Indeed, Pinochet was no more than a typical, short-term military dictator of a type seen all over Latin America, bereft of charisma or serious ideology. His rise to power was the consequence of historical accidents, not of ideology or mass mobilization, and he left behind a thriving democracy.

Raimondo attempted to become a Republican leader in San Francisco but was quickly dumped after boring the small party group in that city with his pretensions and diatribes. He took over a new conservative tabloid in San Francisco and soon put it out of business by turning every front page into a showcase for headlines about himself. About these ventures, Raimondo writes, "National Review was my bible as a teenager, and I actively campaigned for Barry Goldwater for President in 1964. From there I joined Young Americans for Freedom (YAF), and then founded my own youth group, 'Young Radicals for

Capitalism.' We had a huge chapter at Wayne State University, and put out a single issue of a magazine, The New Radical, that was filled with denunciations of the New Left. From there I joined the Libertarian Party during the presidential campaign of Roger MacBride (1976) and subsequently ran for office (Congress, state legislature, etc.) several times in California under the LP banner. I left the LP in 1983."

Raimondo has always wanted to be considered an author and journalist, no less than a political figure. At about 13 or so, he seems to have imagined himself as a science fictioneer. But he never had the discipline or stamina to apply himself to any profession aside from that of absurdist publicity hound. He has failed as a journalist and political commentator, exactly as Hitler failed as a painter, as Mussolini failed as a socialist leader, and as the most notorious fascist of the left, Fidel Castro, failed as a lawyer.

Like his models, when Raimondo never engages intellectually with opponents, but relies on invective, insults, and innuendo. Notwithstanding his bizarre and vulnerable persona as a gay Buchananite, he glories in violating the privacy of others. He is obsessed with exposing neoconservatives as "Trotskyites," a largely spurious claim, since the most famous example among the original neoconservatives, Irving Kristol, was a Trotskyist for only a year, nearly seventy years ago, and only a handful of recent ex-leftists - almost entirely ex-Democrats - are leading neo-conservatives today.

The psychological term for Raimondo's posturing is "projection." He is obsessed with rooting out alleged political, ideological, and even religious chameleons, with the unconscious intent of advertising his own political transvestism. This pattern is evident in all his activities: he claims that America is becoming a dictatorship, the better to justify his own ambitions for power. He defends the establishment media against criticism by conservative weblog authors, although without the rise of the "blogs" he would be nothing. Until the launch of Buchanan's unreadable (and soon to be defunct) American Conservative, his only place of publication was the paleo-conservative Chronicles.

Posing as a war-hater, Raimondo defends murderous dictators like Milosevic, who unleashed the only wars in Europe over the past half century. He presents the Ba'athist party-states in Iraq and Syria as victims of the malicious West and openly wished that Japan had won the Second World War, while fiercely alleging his patriotic motivations. When it comes to America's present wars, he revels in a repellent defeatism. The heinous attacks on America on 9/11 become for him an explanation of American "fascism."

Taking a leaf from his comic-book canon of political wisdom, Raimondo describes fascism as a product of "the traumatic humbling of a power once considered mighty." He cites Germany defeated in the First World War, while ignoring that Italy, where fascism originated, was a victor in that war, as was the third Axis power, Japan. Perhaps this omission can be ascribed to the fact that Raimondo idolizes Japan, which was at the height of its power when it attacked Pearl Harbor. As he wrote so eloquently, in an article titled. "Hiroshima Mon Amour: Why Americans Are Barbarians," posted to his

site on August 8, 2001, "the idea that America is, in any sense, a civilized country is easily dispelled." By contrast, imperialist Japan, which slaughtered millions in East Asia, is his idea of paradise. He believes "the wrong side won the war in the Pacific." It is, by the way, extremely doubtful that Raimondo has ever set foot on Japanese soil.

The upshot of Raimondo's mishmash is his charge that September 11 was "an enormous defeat for the U.S.," and thus the source of Bush fascism. Many fascist movements have been expansionist and imperialist, but others were historically known for their promotion of disaffection and demoralization, such as those in France and England before the Second World War, and the isolationist legion in America at the same time, which Raimondo seeks to revive. The Rosetta Stone of his philosophy is Buchanan's idea of the betrayed "American republic" - betrayed by democracy that is - an ahistorical trope which echoes prior fascist movements.

Classic fascism has other characteristics that resonate in Raimondo's agendas. He is a fanatical rumormonger, asserting that U.S. war plans against Syria and Iran are nearly operational, while Bush administration policies toward these states have been notably circumspect. He was among the most active disseminators of the legend that an innocuous document, titled "A Clean Break," having to do with Israeli foreign policy, was actually a blueprint for the invasion of Iraq.

If, as Mary McCarthy said, every word written by the Stalinist Lillian Hellman was a lie, including "and" and "the," Raimondo is a prevaricator down to the placement of commas, periods, and semicolons. One of his favorite tricks is the mendacious use of hyperlinks, giving the impression that his statements are backed by other sources. These are usually his own articles, immodestly declared by him to be "classics," which in fact have little or nothing to do with his latest ravings, but lead to more lies through more links. This, too, is not original with Raimondo; it is the Chomsky method of meretricious citations.

Raimondo calls Abraham Lincoln "the closest to a dictator that any American president has ever come." A couple of days later, forgetting or ignoring that statement, he labels President Franklin Roosevelt the "predecessor" of today's "fascism," and declares that Harry Truman and Winston Churchill were also "fascist heroes." At the same time, he tenaciously defends Milosevic - a dictator who freed no slaves - and, equally insistently, denies the occurrence of the 1995 massacre of Bosnian Muslims at Srebrenica. He also defames the Albanians, and encourages others on his site to do the same, and then denies being an apologist for Serbian war crimes. He has called the Kosovars "the Shi'ites of Western Europe" - meaning, Muslim friends of America, who deserve to be slaughtered. He fervently hopes for a new war between Slavic Macedonians and Albanians, since nothing warms his heart so much as the thought of dead Albanians except, perhaps, the dead "Zionists" buried in the Twin Towers on 9/11.

Calumny is Raimondo's Socratic method. He refers to David Frum and Richard Perle, two intellectuals who have no governmental authority whatever, as "strutting martinets." When I myself attempted to clarify the status of

Islam in Uzbekistan, an American ally, while criticizing obstacles to democracy there, he labeled me a defender of torture. He accused me of "rationalizing the same sort of regime in the U.S." as in Uzbekistan - based, according to him, on "torturing dissidents, shutting out all political opposition, and arresting thousands on account of their political and religious convictions."

In his latest ridiculous column, "The Specter of Fascism," dated March 9, the Raimondian style of revisionist history is in full display. In a single paragraph, he refers to the leftist New York tabloid PM, published in the late 1930s and 1940s, as "Communist Party-controlled," which will certainly come as a surprise to Arnold Beichman, a long-serving anti-Communist and former leading editor of the paper. PM was famous as a battleground where Stalinists and anti-Stalinists fought for influence, but was never under Communist control. For one thing, unlike the real Communist press, such as the Daily Worker, PM did not promote an "antiwar" alliance, during the Stalin-Hitler pact, with the Nazis, of the kind Raimondo wishes to revive today - which is why PM, a newspaper that went out of business in 1948, still provokes Raimondista rage. Raimondo refers to PM's identification of pre-1941 isolationists as a "fifth column," which Dennis shrieks was "scurrilous and untrue." He's wrong. Calling the pro-Axis rabble in America then a "fifth column" was accurate reporting, just as it is accurate reporting to describe Dennis Raimondo as a sympathizer of America's enemies now.

Sometimes Raimondo posts other leftwing fascists to do his slandering for him. He has done this with Kevin Keating, infamous for hoisting a banner during the anti-Iraq demonstrations in San Francisco that read: "We Support Our Troops When They Shoot Their Officers." If a critic of Saudi Arabia's support for Wahhabism enters his sights, he will accuse them of fomenting war against the Kingdom. He has, in fact, insisted that the neo-conservatives in the government are actually preparing military action against the Saudis. Raimondo's protective attitudes towards the Saudis derive perhaps from the fact he and the Saudi princes share a commitment to the fable of "Zionist" involvement in 9/11.

For Raimondo, the Great Satan is America, and the Little Satan is Israel. He has written a screed called The Terror Enigma, that is a kind of Protocols of the Elders of Zion for the War on Terror. Raimondo's tract - it's only a pamphlet issued by a vanity press - insinuates, with no serious evidence, that the Israeli government had prior knowledge of 9/11 but failed to warn our authorities; that because an Israeli lived in the same neighborhood as a 9/11 conspirator they were naturally complicit; Israelis selling art on the streets of the U.S. were actually big-time spies engaged in undermining our government; that here, there, and everywhere, the omnipotent Israelis control everything, so why not the attack on the Twin Towers as well? The next step from this conspiracy logic is, of course, the claim that Israel was in on 9/11 with the Bush administration.

On October 29, 2004 Raimondo wrote a piece under the headline, "Bush and Kerry put Israel first." It claimed that, "the Jewish state keeps an entire

people captive in the twin concentration camps of Gaza and the West Bank;" and "the Israelis love to torture and berate [Yasir Arafat] far too much to let him die a natural death." Referring to the Protocols of the Elders of Zion, he wrote, "one needn't refer to fiction when the relevant facts are so readily available." (In other words, the Protocols may be fake, but they tell the truth.) According to Raimondo, "Today, the word 'fascist' is the political equivalent of the 'f'-word, rendered virtually meaningless on account of its degeneration into pure epithet. Yet, Israel in its present trajectory fits the classic definition of fascism." And: "Israel, far from being our faithful ally, is potentially an enemy."

Almost as intense as his hatred for the Jewish state is Raimondo's loathing of democracy. Some may have been taken aback by the volume of his bile when he denounced the "orange revolution" in Ukraine as well as the current democratizing efforts in Lebanon. But not those who have followed Raimondo's prominent association with the Russian Jew-baiting website, Pravda.ru, and its American contributor, the neo-Nazi Bill White.

Bill White has followed the predictable career of neo-Nazi agitators. He is a Jew-hater and a compulsive liar, frequently inventing "facts" about those he targets. Posing as a "libertarian socialist" with a site at www.overthrow.com, he recently distinguished himself by hailing the murder of the family of the judge in Chicago who had the temerity to order payment of a fine by a neo-Nazi leader. The Roanoke Times reported on March 3, "As authorities investigate the killings of a federal judge's family in Chicago, a Roanoke white supremacist on Wednesday applauded the murders as justified violence against Jews and the federal government. 'I don't feel bad that Judge [Joan Humphrey] Lefkow's family was murdered,' William A. White, editor of The Libertarian Socialist News, wrote in an essay Tuesday on his Web site, Overthrow.com. 'In fact, when I heard the story I laughed. 'Good for them!' was my first thought.'"

While sorting out the love affair between antiwar.com and overthrow.com is akin to diving into a sewer, Dennis Raimondo and Bill White were eager contributors to the Pravda.ru site until the "patriotic" admirers of both bridled at their association with a journalistic enterprise associated, in the mind of most Americans, with old-fashioned Communist propaganda. Articles by both Raimondo and White have been widely recirculated by the Saudi-funded Council on American-Islamic Relations (CAIR). In the "red-brown" logic, Jew-baiting works equally well for fascists, Communists, and Islamo-fascists.

Raimondo's website consistently published propaganda generated by Randall (Ismail) Royer, a former CAIR employee now doing a 20-year federal sentence for terrorist activities. Recently, one of Royer's associates, Ahmad Omar Abu Ali, was charged with plotting to assassinate President Bush in collaboration with al-Qaida. Before his arrest, Royer distinguished himself between with a campaign to harass and intimidate critics of the jihadists - myself, and the Saudi dissident Ali al-Ahmed among them - in the Washington region. Raimondo gleefully recycled Royer's Jew-baiting rants on his website. CAIR, which employed Royer, joined in the campaign by

redistributing the Raimondo screeds. CAIR - which pretends to be an anti-defamation organization - also disseminates the neo-Nazi propaganda of Bill White.

CAIR poses as a civil liberties advocate, Raimondo poses as "antiwar," White poses as a "libertarian socialist," and their comrade-in-arms Kevin Keating poses as a "revolutionary." The technique is familiar to any history student: the Nazi party called itself the socialist party of the German workers, while plotting to suppress the labor movement and enslave wage-earners.

The law recognizes that some conspiracies are real: one such is the common effort of Raimondo, CAIR, Royer, Abu Ali, White, Keating, and others to silence the critics of Islamist extremism and intimidate the supporters of America's leadership in the global war on terror. Of that leadership, Raimondo has written, "Go F*ck Yourself, Mr. President." (November 26, 2003).

Raimondo has taken on the role of a pre-1941 Axis agent in America, lashing the Jews, giving comfort to the country's worst enemies, defaming the president, and, in general, seeking to undermine faith in democracy. He also craves martyrdom, and dreams that he will be arrested and tried for sedition the way some of his heroes were. He is so reckless in his provocations that he may some day get his wish.

On his Antiwar.com website, Raimondo wrote in August 2005: "The invasion of Iraq was itself a great diversion, in that it had nothing to do with the alleged attempt to crush al-Qaeda. Instead, it had everything to do with the preconceived agenda leading neocons took with them to Washington when they were brought in by the Bush administration to run American foreign policy. They hijacked that policy to engage in an ideology-driven adventure, one that - having achieved, like so many government programs, the exact opposite of its stated intention - is ending in bloodstained tragedy."

This profile is adapted from the article "Justin Raimondo: An American Neo-Fascist," written by Stephen Schwartz and published by FrontPage Magazine.com on March 15, 2005.

It's a well known fact that KB2SMS and N8WWM sell CB amps. Google up Doug
Adair N8WWM and you will see that selling CB amps and crappy homemade
antennas are there specialty.

1260. LF Engineering H-800 Antenna - Again

Newsgroup: rec.radio.shortwave
Date: 2006-02-09 02:13:45 UTC
From: DeWayne <k9kz@indy.rr.com>
Message-ID: <tzxGf.136906$PY6.85611@tornado.ohiordc.rr.com>
Source record: 61659

I live in a townhouse. My best antenna is my rain gutter. I was not familiar with the H-800 until the recent thread. My location is somewhat noisy. Is it reasonable to assume that I would be able to find a fairly quiet location inside my home for the H-800 since it is so compact and could easily be moved around my home to find a possible quiet location? I would like to try one on my Icom R75 but the antenna is not cheap. I don't think dealers normally accept returns on antennas.

Maybe it's due to the fact that there is an order of magnitude more
(or more) clock ticks rolling by every second.

What ever happened to the good old days of AM radio civil defense?
AM radio 700, WLW. The voice of Cincinnati! The only station in the
country assigned to that frequency. There is also another out this
way (westward). Don't know the call letters. They still do civil
defense broadcasts though... both IIRC.

The TV stations do as well. That's where the "This is a test of the
Emergency Broadcast System." Used to be tested on the first Wednesday
of each new month. Tornado sirens in the midwest do that as well. At
12 noon on said days.

I can only report on my own experience. Whenever I've tried to use the
H-800 indoors, it picked up intolerable amounts of noise. In my
opinion, the main strength of the H-800 is precisely that it can
survive outdoors. So, if you can't put it outside, I'd get something
else.

However, I will say that the H-800 is a mere 26" in length. It would
not be hard to find a very quiet--and very stealthy--location for it.
But I'm always trying to convince people in townhomes not to give in to
restrictive covenants.

Steve

www.google.com Gyration Gyrotransport Mouse

I read about that new Gyration mouse last month on January 22.A lot of people download files and things in their laptop computers to take to work to do presentations. www.gyration.com has developed a nifty little device so that people wont have to lug their laptop computers from home to their office work computers or vicea versa.Check it out,you can tote it on your keychain,in your pocket,in your purse.
www.iocell.com has a few nifty little gadgets too.I have a Gyration mini keyboard and mouse for my computer,I bought them at an Office Depot store for $118.00 plus Mississippi Ripp Off sales taxes.

HAVING come close to extinction, Radio Australia is stronger than ever and about to start broadcasting a breakfast show into the Asia-Pacific region. It is believed to be the first time an international broadcaster has offered a specific "time of day" program in other countries.

Eight years after the Federal Government sold all its transmitters and Radio Australia looked to be facing death, its survival is a remarkable story. It is broadcast by more than 160 radio stations in more than 40 countries and in languages including English, Vietnamese, Khmer and French. Station chief Jean-Gabriel Manguy has devised lateral and innovative ways of getting the content out. Radio Australia transmits its signal via satellite, enabling radio stations in places such as China, Fiji, Malaysia and Indonesia to pick it up and put it to air. Most recently the internet has provided new means of transmission.

At 9.40 Monday morning local time, announcer Phil Kafcaloudes will broadcast his Breakfast Club program, a mix of breakfast banter, news, sport weather and finance into homes across the Asia-Pacific region. >From his small studio in the ABC's Southbank headquarters, Kafcaloudes' show will be heard in locations such as Phnom Penh (five hours behind Melbourne) and Dili, which is two hours behind. Assisted by producer Adelaine Ng, who will sometimes partner him on air, Kafcaloudes says the idea is to mix fun and information with interviews.

"We just have to make sure everything we do has to be of interest to the region," he says.

Midway through breakfast the program will be interrupted with Radio Australia's version of AM, Connect Asia, a one-hour current affairs program hosted by Sen Lam.

To Manguy, putting programs such as these to air is the next phase of his strategy to ensure the ongoing health of his station. "Content is king," he says, "it has to be because we are competing against the BBC World Service, Voice of America, Deutsche Welle and others."

He is now looking to expand Radio Australia's availability in India and Sri Lanka and soon a station in Bali will broadcast hourly Radio Australia news bulletins. A Breakfast Club podcast is available from radioaustralia.net.au/breakfastclub.

There are quite a few DIY projects on building active whips. They are quite simple, though some people freak out when it comes to inductors.

Even more compact than an amplified whip would be something like the Quantom ferrite loops. They are not as quite as a large aperture antenna like the wellbrook, but they are quite good for something you can put on a desktop.

http://www.dxtools.com/
http://www.ramseyelectronics.com/downloads/catalog/Rmz2006W-15.pdf
http://www.palomar-engineers.com/Loop_Antenna/loop_antenna.html

The only one I've seen used first hand is the Quantum. The null is decent.

You aren't going to see the power 6 in a laptop or even a desktop any time soon. The power 6 is just a little larger (by reports) than the power 5. The power five is a huge chip. That sucker is at least 4 inches square. It's a neat chip but it is expensive to manufacture. The smallest P5 series system is the 520 and that thing goes for about $8000 stripped. To pop a 520 with 2 four packs of disks, with one four pack plugged into the internal integrated Ultra320 SCSI controller, the second four pack plugged into a separate PCI-X Dual Channel Ultra320 SCSI Raid controller, a GXT135 graphics card, you are looking at $12000 for the whole shooting match. Of course you have redundant every thing. You can change disks, power supplies, cooling fans, With out taking the thing down.

However even at $12,000 we sell them like Ihop sells Hot Cakes on a Sunday morning. I have personally loaded and configured them with AIX version 5.2 Maintenance level 4 to AIX 5.3, plus SLES (SuSE Linux Enterprise Server) Version 9.3 and shipped over 300 in the last 5 months. Though the 520 is small you can fit over 2 terabytes(8 250 gig disks) of storage in them. If you fit them with a Fibre Channel HBA and put them in a Fibre fabric who knows how much storage you can have access to. Load a VXA-2 tape drive (160 gig) and it Makes a dandy little server that don't break.

We expect we won't see any Power 6 boxes until the first quarter of 2007. The big bosses are headed over to a big IBM whoopty doo in Las Wages in March and should come back with a lot of info on them.

The advantages of an H800 over a garden variety active whip seem to be a cleaner amplifier and extra dynamic range. But it'll still do a beautiful job of picking up a nearby lamp dimmer.

I think you could predict if it'll work for you with any active whip you might have or care to cobble together with $5 of parts from Radio Shaft. A portable mw radio tuned to a dead spot on the dial might also let you sniff for a quiet zone.

If you do get an H800, spring for the extra $20 for bnc connectors on the antenna end so you can replace the coax when it dies.

Someone else suggested the Quantum loop. I use one at my office with an HRB HW1390A receiver for MW reception. (it's a challenging location) I don't think the Quantum is rated for much beyond 2mhz. But if you want MW, the Quantum is a good choice.

1276. Want to replace old flat tv cable with better coax.

Newsgroup: rec.radio.shortwave
Date: 2006-02-09 05:53:31 UTC

I have done some reading about balun transformers and how I can connect my existing flat antena cable to 75 ohm cable.

However, my questions is this... what if I replace the 30 year old flat cable all the way to the antenna. Will this yield better reception? (It is pretty good as it is.) The exiting flat cable is starting to fall apart at some places. Currently I just have it directly wired to my coax cable (just before it enters the house) with out any type of transformer. The coax is properly grounded (to the circuit breaker box.)

So my questions are these:

1. How do I connect the coax directly to the antenna? Or should I? Do I still need a balun transformer?
2. If I need a balun transformer, does anyone know of a heavy duty outdoor one? (Or should I build my own.)
3. Will reception improve?

Thanx to all who reply.

jg

Yes, your reception will improve. You have a mismatched impedience
now. Yes, you need a balun transformer. Around $5 at any hardware
store, or Radio Shack. If the old cable is deteriorating, it's time
to replace it. The balun comes with about 4 inches of flat cable that
goes to the 2 antenna nuts, then the coax screws to it and goes to the
tv stuff in the house.

Just do it. It's no big deal to do as long as you can get on the roof
and to the antenna. Total cost is the balun, some electrical tape,
and whatever coax you need. Then tape the coax to the mast with
electrical tape. You dont need standoffs for coax.

(Be sure to wire brush the rust off the antenna nuts and coat them
with automotive grease.

Mark

> (It is pretty good as it is.) The exiting flat cable is starting to
> fall apart at some places.

When moisture gets into flat cable (300-ohm twinlead) it degrades the signal. If the insulation is cracked and the wires are exposed, it should be replaced all the way to the antenna. Don't use cheap twinlead. The good kind has foam insulaton under the plastic outer insulation. Connect the new twinlead just like the old one at the antenna. Clean the antenna terminals with some electrical cleaner spray and a plastic scrub pad. It might be better to replace the terminal screws, nuts and washers with new ones made of brass or stainless steel. This may require cutting and/or drilling the old screws off. They usually get corroded on an old antenna.

Currently I just have it directly wired to
> my coax cable (just before it enters the house) with out any type of
> transformer. The coax is properly grounded (to the circuit breaker
> box.)

If you decide to continue using twinlead to the antenna, you should install an impedance matching transformer where the twinlead connects to the existing coax. (See next paragraph below.) Twinlead has less signal loss than coax so it's preferred in reception areas where signal strengths are low. This may not apply in your case. Coax has greater signal loss than twinlead but better immunity to noise reception from home appliances. This is a consideration when deciding which kind of antenna lead wire to use. If coax is used all the way from the antenna to the TV it might require an antenna amplifier to make up for the signal loss in the coax. The amplifier is installed on the antenna mast. The power supply for the amp' is located near the TV.
>
> So my questions are these:
>
> 1. How do I connect the coax directly to the antenna? Or should I?
> Do I still need a balun transformer?

If you want to connect 75-ohm coax to a TV antenna which only has two screw terminals for twinlead, you'll need an impedance matching

transformer. This is the kind which is used on the back of older TV's that have antenna screw terminals instead of a female coax connector. The matching transformer has a coax connector on one end and two wires (pigtails) on the other. The pigtails would be attached to the two terminals on the antenna and the coax goes to the female connector on the matching transformer. You should use a transformer made for outdoor use. You can buy one at Radio Shack or home improvement stores that have a TV hardware department. The labeling will say that it's made for connecting coax to a TV antenna which has screw terminals.

> 2. If I need a balun transformer, does anyone know of a heavy duty
> outdoor one? (Or should I build my own.)
> 3. Will reception improve?

Matching transformers for TV use are not expensive, so it's not worth the effort to make one. It's also not easy to make one that works well at TV frequencies, especially UHF. Proper impedance matching between antenna and lead wire is important for getting the best signal quality to the TV.

I'm not sure what to tell you about the quality of them. I'd guess
they are all made by the same company anyhow, but who knows? Use the
boot that comes with them, and I tend to wrap electrical tape around
that to be sure it stays dry at the coax connector. If water gets
inside the balun, it's cracked and bad from the start. They are
sealed. As another posted said, replace the screws and nuts on the
antenna with brass ones if they are real rusted or corroded.

The outdoor TV antenna baluns are sealed better to prevent moisture from getting inside and degrading the components. They also have a rubber boot to cover the coax connector.

Here are two URL's for Radio Shack TV antenna baluns. The second one has gold plated connectors which should make it more reliable for outside use.

Junius,

1 - Question - Why Not a Windom Antenna
instead of a . . . long, Long. LONG Wire ?

Windom Antenna :

Ensure that the Shorting Strap is between the Two
Ground Terminals of the Par EF-SWL Antenna.
[Antenna Ground and Coax Cable Ground]

Lay-Out the 150 Foot of Antenna Wire as an
Off-Center Fed Windom Antenna with a Short
Arm of 47.7 Feet and a Long Arm of 70.9 Feet.
[The Top Tip-to-Tip would be 118.6 Feet]
The Vertical Up-Leg would be 31.4 Feet
[About 32 Feet above the ground.]
Short Arm of 47.7 Feet = 1/4 WL @ 60 Meter Band
Long Arm of 70.9 Feet. = 1/4 WL @ 90 Meter Band
Top Tip-to-Tip of 118.6 Feet. = 1/2 WL @ 75 Meter Band
Vertical Up-Leg of 31.4 Feet = 1/4 WL @ 41 Meter Band

TIP - Cut the Windom Antenna for your favorite
Shortwave Radio Listening (SWL) Bands and to
"Fit" the Size of your Property :

Connect Off-Center 47.7 to 70.9 Feed-Point
of the Windom Wire Antenna Element to the
Par EF-SWL Antenna's Antenna Terminal.

Your Coax Cable can then be Grounded at the Shack.
-Or- Where the Coax Cable drops directly down from
the Windom Antenna : Install a Ground Rod and
place a SO-239-to-SO-239 pass-through Adapter
on the Ground Rod as a Remote Grounding Point
Connection for your Coax Cable Feed-in-Line.

Large Size Windom Antenna {~ 100 Feet}
60 Meters = 75 Meters + 49 Meters & 31 Meters
T2T = 97.7 Ft = 59.2 Ft + 38.5 Ft & 24.5 Ft High

Medium Size Windom Antenna {~ 65 Feet}
41 Meters = 49 Meters + 31 Meters & 22 Meters
T2T = 63.0 Ft = 38.5 Ft + 24.5 & 17.1 Ft High

Small Size Windom Antenna {~ 50 Feet}
31 Meters = 41 Meters + 25 Meters & 19 Meters

T2T = 51.5 Ft = 31.8 Ft + 19.7 Ft & 15.1 Ft High

2 - Question - Why Not a Loop Horizontal Antenna
instead of a . . . long, Long. LONG Wire ?

LOOP ANTENNA :

Disconnect the the Shorting Strap between the
two Terminals of the Par EF-SWL Antenna.

Lay-Out the 150 Foot of Antenna Wire as a
Horizontal Loop Antenna at about 20 to 25
Feet above the ground.

Connect the Ends of the Loop Antenna Element
to the Par EF-SWL Antenna's Antenna Terminal
and Antenna Ground Terminal (30 Turn Side)

Your Coax Cable can then be Grounded at the Shack.

TIP - Cut the Loop for your favorite Shortwave Radio
Listening (SWL) Band :
+ Extend the Loop to 165.4 Feet = 49 Meter Band
- Trim the Loop to 136.7 Feet = 41 Metter Band

hope this helps - iane ~ RHF

Interesting. It says:

What can be improved in a device that can do everything? The main RF properties like intercept values, dynamic range and sensitivity can hardly be improved substantially. Also the filters for the narrow band selection can not be improved.

What is remaining? At first it is the comfortable control which can be improved. The controls of the KWZ-30 were designbed very thrifty and the use was therefore partly complicated. On the other side there are now new components available which allow a different topology of the receiver with a higher performance. The technical equipment can be improved substantially. With this new performance level the receiver can also be used by professional users.

Also up now is the oncept page:

The Concept

Overview

The DSP-Receiver KWZ-30/2 is like its predecessor a receiver for the frequency range 10 kHz to 30 MHz (optional to 60 MHz) using digital signal processing.

It was predicted for a long time that the analog/digital converter moves closer to the antenna. This is the case too in the KWZ-30/2. The first intermediate frequency is 75 MHz as before. From there the signal is converted to 30 kHz using quadrature mixers. This second intermediate frequency is fed to the A/D-converters. Then follows the DSP-unit, which is equipped with a high performance DSP (32 bits).

The Controls

The controls of the KWZ-30/2 are much more comfortable than the controls of the predecessor, which intentionally were designed thrifty. The display is a colour display (quarter VGA) with a resolution of 320 x 240 pixels. On either side of the display are 5 programmable keys. So the current function of the key can be shown on the display. Besides the main encoder for the frequency tuning there are three more encoders with smaller resolution. One is dedicated for the volume control while the other two can be programmed for other functions. Of course there too is a key pad with the numerical block and other keys for the menue control and also for dedicated functions.

The Circuitry

The analog part of the set is a double conversion superhet with the first IF of 75 MHz and the second IF of 30 kHz. In front of the first mixer the signal is passed though a low pass filter, a switchable high pass filter and an amplifier/attenuator stage.

The conversion from the first IF to the second IF is performed using quadrature mixers which secures a high mirror frequency attenuation. The mixers are followed by two A/D-converters with a dynamic range of 120 dB. From the A/D-converters the signal is passed to the DSP. It is a 32-bit DSP from Analog Devices. So there is an almost unlimited dynamic range available for the signal processing. In the DSP the selection and demodulation of the signal is performed as well as the other processing like notch filter, noise reduction, squelch and others.

For the alimentation a switching power supply is used which accepts voltages from 90 to 240 Vac. With this unit no voltage selection is necessary

worldwide. The set can also be run with 12 to 15 Vdc.

Optional Equipment

The frequency range can be extended to 30 - 60 MHz. This extension is performed using an additional front end module with filters and its own VCO.

The spectrum display allows the display of the frequency spectrum in a range of +/-100 kHz from the current frequency with a dynamic range of 80 dB. The visible frequency range can be selected as well as the attenuation.

DRM: it is our intention to use a module from Texas Instruments for the demodulation. At this time a sample unit is not yet available. In any case it will
be a solution which will not need an external PC.

Sounds like the DSP processing will be much more robust than in the earlier model, which could be a big plus.

Then there are two hefty options (extended frequency range and the spectrum display) for people to choose from. (It'll be interesting to see how expensive these options are, especially the spectrum display.) I guess there's also a DRM option, but whatever...

Then there are some ergonomic improvements. On the whole, it sounds promising.

Tom,
Thanks for the reply. I don't want to beat this to death, but maybe you are misunderstanding me (or I am not communicating very clearly). <grin>

I am not saying people are *not* hearing packet on the repeater, just that the packet *is not originating on SuitSat*.

Above, you said "437.8 is repeating
Suitsat".

Well, that is only partially true--it is repeating *anything and
everything* it hears on the frequency, not *just* SuitSat (and maybe not
even that--see ARRL article quoted below).

Here is what the ARRL has to say about it:

> SuitSat-1 Reports via NA1SS [ISS repeater on 437.8] Crossband Repeater Discounted
>
> Several reception reports on the SuitSat Web site indicate SuitSat-1
> audio has been retransmitted via the NA1SS crossband repeater aboard

More follow-up on the news that NASA was censoring its scientists:
Michael Griffin, NASA Administrator, did the right thing and issued a
strongly-worded statement that publicly-funded scientists should speak
to the public without interference. George Deutsch, the public affairs
officer who had been altering scientists views in press releases turns
out to be a young Texas A&M dropout, political appointee who either
had his own political and religious agenda or was being used as a
patsy by the Bush administration, has resigned. Mr. Deutsch's rï¿½sumï¿½
claimed he had graduated from Texas A&M. It turns out he had not.
Oops! Gothamist loves how someone at NASA gave the rï¿½sumï¿½ to a
reporter. They must have been eager to see him go. We will let James
Hansen, the NASA scientist who first alleged the problem, have the
last word (as quoted from today's Times):

"He's only a bit player," Dr. Hansen said of Mr. Deutsch. " The
problem is much broader and much deeper and it goes across agencies.
That's what I'm really concerned about."
"On climate, the public has been misinformed and not informed," he
said. "The foundation of a democracy is an informed public, which
obviously means an honestly informed public. That's the big issue
here."

Hello Rikk,
Although the web listings are useful for myself I prefer printed lists
so I buy "Passport to World band Radio" and also "World Radio &
Television Handbook" Both can be had from Amazon or WH Smiths etc can
order them. They are annuals so make you you get the 2006 editions.
They are not as up to date as a daily internet listing but they are
usually quite accurate. I have most of the English lanugage frequencies
in my receiver's memory so I can e-mail them to you if you contact me.
regards,
Alan

1314. UK TV Detector Vans and Scanners

Newsgroup: rec.radio.shortwave
Date: 2006-02-09 15:03:22 UTC
From: alanjgidd@yahoo.co.uk
Message-ID: <1139497401.995476.303660@f14g2000cwb.googlegroups.com>
Source record: 61714

I would think that the snoopers at GCHQ can easily eaves drop on anyone as they'll have all the equipment and power to do so. No one's safe! As for TV detector vans, well that gets me going. The UK is a fairly easy going place but why the state prosecutes people for not having a TV license is beyond me. A complete waste of public money. I have some experience of the prison servive, not as an inmate! and there are dozens of people in the nick for not having a licence. Pathethic. I do not own a TV but get several letters each year which are quite threatening. I hand them over to my solicitor nowadays and I get a grovelling reply from the b**stards in Bristol but it all starts again in January. Meanwhile big business continues to avoid its tax obligations and rifles pension funds while the state does nothing but continues to harass me. Only in the UK.....
Keep looking over your shoulder....
Regards,
Alan

Along this same general thread of Hallicrafters rigs in entertainment, at Disney's California Adventure, there is a decorative construction leading up to one of its rides (also known as theming) that includes an "adventure base station" with at least a Hallicrafters receiver and may have included (IIIRC) a Hallicrafters transmitter. It's been awhile since I was there, but I think it was along the queue for the Grizzly Rapids raft ride.

To be quite honest, I think the wacko segment of the Muslim world has outdone itself this time. This cartoon issue is the kookiest perversion of a religious belief that I can recall seeing in a long time, and every Muslim of common decency and good heart should condemn the extremist actions roundly.

Nope. Nobody was suggesting ending the embargo and inspections that
were effectively preventing him from doing anything in that direction.

He had nothing as of 2003, and even unconstrained it takes years to
set up and operate a uranuim purification industry, and he'd have to
get the uranuim ore from someplace like Niger, and all the countries
that have uranium ore kepp a close eye on who digs it up. The ore for
a nuke program is said to be 10s to a hundred loads in semi trailor
trucks. Hard to hide in Africa where you can count the big trucks on
fingers and toes. There is no lose uranium ore on the market.

Homeowners associations apparently can't do anything about "TV antennas".

I like RHFs' idea, but think you could probably just put an H800 on a
mast and claim it's for local reception.

The problem is, it isn't the extremists. It's EVERYBODY from Gaza to Indonesia. The streets in every Muslim country are filled with Muslims holding signs saying in effect "slay all unbelievers". Islam will have more adherents than Christianity in 20 years, all of them having extreme views. The Muslim world is young while the West is progressively getting older. I fear we're headed into another dark age. It's only a matter of time before the terrorists release a whopper of a bioweapon and the world's population is reduced by up to 90%. The few remaining people will be forcibly converted to Islam, and the world will return to a feudal, agricultural society-in the best case scenario. Worst case, we go back to living in caves as hunter gatherers.

Or, for that matter, it might just be so inconspicuous that no one notices/complains, even if it is clear that it's not TV-related. Clamp it onto a ventilation pipe on the roof and I'll bet no one would ever even notice. A chimney might also work. Maybe even a near by tree. The H-800 can also be oriented horizontally, which opens up some additional possibilities.

The original point of the UK's receiver licensing program was to fund government broadcasting (BBC). Today, I suspect that the TV license program is simply a profit center, and they don't want to stop it because the loss of revenue would be too great. I'm surprised that they would sentence people to prison for not having a license. Wouldn't a fine be more appropriate? Of course, since the govt is incompetent, they try to get license fees out of people who don't own a TV. Here in America, we have big business not paying taxes at all while poor people trying to claim a tax credit specifically designed for them are audited and prosecuted mercilessly for no reason at all other than that rich people are allowed to cheat on taxes while the poor are not. At least we don't have to license our TVs to the govt-a big advantage of not having an official broadcaster. At least the UK doesn't license radios anymore. I have a British radio from about 1970 that I bought on Ebay, a transistor model with LW/MW/FM, and the license number is on the bottom. Quite an interesting artifact.

The cost of a license is £126.50, around US$220.00. If you just have
a b/w tv then it's about a third of the cost. To clarify if you don't
have a license, own a tv and are caught using it and somehow do not pay
the fine or at least make an arrangment with the magistrate then prison
looms. My point is that I could walk out of my door in central London,
smash a bottle over a strangers head and quite likley avoid prison.
It's a strange world. If radios in the UK required a license again I'd
give up. Only recently have dog licenses been stopped. Anyhow, little
to do with radio but interesting.

Hello:

Will be banging in some sort of ground rod to ground an outdoor lighning arrestor and Balun.

Saw the 5/8 O.D. Cu plated solid steel 8 foot long ones by ERICO at Home Depot, and I imagine these are what most folks use.

But was wondering:

Might it be better to use, e.g., a 3/4" or 1" Cu pipe, the kind that houses are plumbed with for their normal
water supply.

Would be more surface area on the outside, and you would also pick up some area from the pipe's ID if it is dirt filled due
to the driving into the soil.

Thoughts on ?

Bob

Doesn't Radio China have a "drive time" program carried on a couple of
US public radio stations?

I think the BBC and China also make TV news programs timed to run at
dinnertime in the US (usually public or small UHF TV stations).

Tim.

More than an order of magnitude, actually. But I do not need all those clock ticks because I usually don't use bloatware. However, while the old 90's laptops had throttles the new ones often don't unless you buy a really expensive version.

The nice thing on the Compaq was that you could also slow it with the strike of a key, didn't have to go through that dreaded set-up routine with the 'dripping faucet'.

That it could be. To my ears it sounded more like a Carribean-style
steel drum, but underneath another SW station I'm not going to rule out
a Timpani.

Hello Zadoc,

<power outlet for laptops on aircraft>

> Perhaps one of you engineering types can pick up the concept and
> sell it to an airline?
> </ Zadoc comment ends>
>

It's been done AFAIK. Maybe not in coach, I don't know. I did frequent very long flights but the 5-6 hours my Compaq gave me was certainly enough. You can't really work more than 8-9 hours on a flight, minus the times when you are interrupted because the seat neighbor needs to go and so on. About half my work time was 'paper time', sketching circuits and calculating stuff with the trusty HP11C or (hold the tomatoes) the slide rule calculator. BTW, this HP11C ran more than a decade on one set of batteries. Now that's a true engineering achievement.

Had to give up on Smith charts though, they don't let you take a compass on board anymore.

Really? That doesn't make much sense.

What would make sense but hasn't sunk in with the marketeers: Build a laptop that uses regular AA rechargeables and, in a pinch, can also run on alkalines for a while. Ah, but that would be too practical I guess. Because then you could buy replacement batteries pretty much anywhere in the world and maybe that's what they don't want you to be able to do. They want you to have to buy their $100 replacement battery and not 16 AA cells for $20 when they are on sale at the local wholesaler.

I don't think the energy density and weight of typical consumer NiMH
batteries is anywhere near the Li batteries that they use in laptops.
My Sony-Ericcson cell has a tiny flat Li polymer battery that is rated
900mAh @3.6V. Only 48 x 34 x 5.5mm, and very light. Compare with 3
NiMH AA cells with less capacity, much heavier and far bulkier.
Similarly the Li cell used in Nikon DSLRs. Both have quite impressive
processing power and very long operating and standby times.

Part of the problem is that software requirements are not remotely
static, and rapidly increasing demands on laptop processors means that
they tend to be at the bleeding edge of battery technologies.

Best regards,
Spehro Pefhany

If you don't know who General Zinni is, here's his bio;
http://en.wikipedia.org/wiki/Zinni

http://www.cdi.org/program/document.cfm?DocumentID=2208&from_page=../index.cfm

Gen. Anthony Zinni, USMC, (Ret.) Remarks at CDI Board of Directors Dinner, May 12, 2004

"I just came back from giving a lecture at UCLA yesterday, and the
lecture was on the Middle East. I tried to ... for the students
there, step back and take a more strategic view of the Middle East
and the issues out there and maybe give them a perception of the
problems and issues from the eyes of those that live with it
day-to-day, the Arabs, Israelis, all those that make up the peoples
of the Middle East.

On the way back I was thinking about what to talk about here and I
know Iraq is a hot topic and I thought I would stay with Iraq.

...I think the first mistake that was made was misjudging the
success of containment. I heard the president say, not too long

ago, I believe it was with the interview with Tim Russert that ... I'm not sure ... but at some point I heard him say that "containment did not work." That's not true.

I was responsible, along with everybody from General Schwarzkopf to his two successors, that were my predecessors, myself, and my successor, General Franks, up until the war, we were responsible for containment. And I would like to explain a little bit about that containment, because I thought we did it pretty well, given the circumstances. And it began with Bush 41 accepting the UN resolution to conduct the war, staying within the framework of the UN resolution, and not after the war, going to Baghdad, breaking the coalition, ending up inheriting a country that I think he clearly saw would be a burden on us, our military, our treasure, and would break relations around the region, and would put him outside what he considered his international legitimacy for doing this - the resolution by which he operated and conducted the war, and the resolution by which we established the sanctions.

Singapore (and Thailand) has been notably crappy this time of year.
9740 is weak, except for maybe an hour or so around sunrise, 6195 is
full of Mongolian interference, and 7160 has something else stepping on
it, too. Some days, the best signal at 16:30 is 3915, and that's not
saying much.

The French Guiana is coming in ok in the afternoon but that's pretty
much the same vanilla Beeb news/chat you can get on the local NPR
station late at night. My local NPR outfit has an allergy to
broadcasting the Beeb's best (IMHO) stuff, the science shows and
documentaries. And the shortwave drops out at 01:00 for an hour
when the documentarys come on.

BEYOND THE IVORY TOWER:
The Scientific Consensus on Climate Change
Naomi Oreskes*
Policy-makers and the media, particularly in the United States,
frequently assert that climate science is highly uncertain. Some have
used this as an argument against adopting strong measures to reduce

greenhouse gas emissions. For example, while discussing a major U.S. Environmental Protection Agency report on the risks of climate change, then-EPA administrator Christine Whitman argued, "As [the report] went through review, there was less consensus on the science and conclusions on climate change" (1). Some corporations whose revenues might be adversely affected by controls on carbon dioxide emissions have also alleged major uncertainties in the science (2). Such statements suggest that there might be substantive disagreement in the scientific community about the reality of anthropogenic climate change. This is not the case.

The scientific consensus is clearly expressed in the reports of the Intergovernmental Panel on Climate Change (IPCC). Created in 1988 by the World Meteorological Organization and the United Nations Environmental Programme, IPCC's purpose is to evaluate the state of climate science as a basis for informed policy action, primarily on the basis of peer-reviewed and published scientific literature (3). In its most recent assessment, IPCC states unequivocally that the consensus of scientific opinion is that Earth's climate is being affected by human activities: "Human activities ... are modifying the concentration of atmospheric constituents ... that absorb or scatter radiant energy. ... [M]ost of the observed warming over the last 50 years is likely to have been due to the increase in greenhouse gas concentrations" [p. 21 in (4)].

IPCC is not alone in its conclusions. In recent years, all major scientific bodies in the United States whose members' expertise bears directly on the matter have issued similar statements. For example, the National Academy of Sciences report, Climate Change Science: An Analysis of Some Key Questions, begins: "Greenhouse gases are accumulating in Earth's atmosphere as a result of human activities, causing surface air temperatures and subsurface ocean temperatures to rise" [p. 1 in (5)]. The report explicitly asks whether the IPCC assessment is a fair summary of professional scientific thinking, and answers yes: "The IPCC's conclusion that most of the observed warming of the last 50 years is likely to have been due to the increase in greenhouse gas concentrations accurately reflects the current thinking of the scientific community on this issue" [p. 3 in (5)].

Others agree. The American Meteorological Society (6), the American Geophysical Union (7), and the American Association for the Advancement of Science (AAAS) all have issued statements in recent years concluding that the evidence for human modification of climate is compelling (8).

The drafting of such reports and statements involves many opportunities for comment, criticism, and revision, and it is not likely that they would diverge greatly from the opinions of the societies' members. Nevertheless, they might downplay legitimate dissenting opinions. That hypothesis was tested by analyzing 928 abstracts, published in refereed scientific journals between 1993 and

2003, and listed in the ISI database with the keywords "climate change" (9).

The 928 papers were divided into six categories: explicit endorsement of the consensus position, evaluation of impacts, mitigation proposals, methods, paleoclimate analysis, and rejection of the consensus position. Of all the papers, 75% fell into the first three categories, either explicitly or implicitly accepting the consensus view; 25% dealt with methods or paleoclimate, taking no position on current anthropogenic climate change. Remarkably, none of the papers disagreed with the consensus position.

Admittedly, authors evaluating impacts, developing methods, or studying paleoclimatic change might believe that current climate change is natural. However, none of these papers argued that point.

This analysis shows that scientists publishing in the peer-reviewed literature agree with IPCC, the National Academy of Sciences, and the public statements of their professional societies. Politicians, economists, journalists, and others may have the impression of confusion, disagreement, or discord among climate scientists, but that impression is incorrect.

The scientific consensus might, of course, be wrong. If the history of science teaches anything, it is humility, and no one can be faulted for failing to act on what is not known. But our grandchildren will surely blame us if they find that we understood the reality of anthropogenic climate change and failed to do anything about it.

Many details about climate interactions are not well understood, and there are ample grounds for continued research to provide a better basis for understanding climate dynamics. The question of what to do about climate change is also still open. But there is a scientific consensus on the reality of anthropogenic climate change. Climate scientists have repeatedly tried to make this clear. It is time for the rest of us to listen.

>Twinlead has less signal loss than coax so it's
>preferred in reception areas where signal
>strengths are low.

Should I be worried about this? Currently the twinlead only runs from the top of the antenna to where it enters my house. About 40 ft. Then I have coax in my crawl space for another 80 feet or so. 30 ft of which is just coiled and wasted. Reception for local (Sacramento) stations is pretty good. Reception for San Francisco stations is too grainy to watch at times. My zip code is 95682. (So I should not expect too much from San Francisco.)

If need be I can replace the existing twinlead with new twinlead. Should I look into this?

The HP OmniBook 425 and 430 come close. They had 486SL-25 processors, a reflective (viewable in sunlight) monochrome LCD sharper than any I've ever seen--ever. They ran on NiMH battery packs, but 4x AA-cells could be inserted in a pinch. The 425 had Windows and applications in ROM, obviating disk crashes.

Retrofitted with a FLASH disk and modern NiMH cells in the battery pack, mine has no moving parts, is dead silent, and gets close to 11 hours on a charge. The FLASH disk is *fast* and saves beau coup power. And, running Win3.1, the built-in MS Word 2.0 and Excel are faster than their counterparts my 2.5GHz Pentium 4 XP bloat-machine.

The VERY best thing is that it suspends in ~300mS, keeping your work ready for weeks, then restarts as quickly, right where you left it. In this way I can use it like a book -- pick it up, open it to the page I want, work, then shut it off instantly.

It's a great wordprocessing / notetaking / BASIC utility program writing / spreadsheet machine, and I only wish the current machines could come close.

Regards,
James Arthur

While you are at it, you may wish to replace the antenna as well. If you do be sure to get one with good UHF reception. Once the US switches to digital TV, I believe in 2009, all TV signals will be in the UHF band.

The operating system itself is more CPU intensive and has more
process threads running at any given time. So, even the OS is
"bloatware" nowadays. A very slow CPU would make for a very slow
operation and GUI for you. Not a desirable thing.

> However, while the
>old 90's laptops had throttles the new ones often don't unless you buy a

Actually, most of them do. Transparently even. It may even be built
into the OS, depending on what you are running.

About six something years ago,I owned an Ericsson cell phone.One day I saw some plastic replacement battery holders thingys at a Wal Mart store,I think they were made by Duracell company.I bought one of those cell phone battery holders.I still have it sitting in one of my bedroom dresser drawers.If I remember,it holds six AAA batteries and I used rechargable Eveready batteries in the battery holder.I used it for a spare battery for when my regular cell phone battery ran down.Somebody should put something similar on the market for laptop computers.I think they would sell like hotcakes.Ray O Vac company makes some battery rechargers with the special Ray O Vac batteries which charge back up in about fifteen minutes.

"Civil Defense" warnings and the "Emergency Broadcast System" were
replaced by the "Emergency Alert System". WLW is not the only station
on 700 KHz. It is one of the old "Clear Channel" allocations that lets
them run full power at night while the others reduce power or go off the
air. At one time that was 500 KW around the clock. See:
http://www.700wlw.com/ and http://hawkins.pair.com/wlw.shtml for more
information about WLW.

The OS is probably the most prevalent problem WRT to bloat. That's why I love DOS. Except for very few apps I could still use it. But my CAD system doesn't come in DOS anymore :-(

I called Dell and asked. Two rather current laptops (Inspiron series) do not have that feature. The lady at the other end of the line sounded very knowledgeable about hardware. I felt that 'mobile processors' had just made a leap backwards in ingenuity. It's like taking the coast fuel shut-off out of cars again, something no auto mfg would ever dare to think about.

But what does it cost to replace that battery?

NiMH have come a long way. I don't think it would be a big deal to
place, say, 16 AA cells in a laptop. This would yield over 40Wh, more
than my old Compaq had. Of course, when the laptop burns so much heat
that the fan comes on every 8 secs like it does on the one in the lab
that's a drop in the bucket.

I see why Li batteries almost have to be the future. Considering that I
don't do my work much differently than in the 90's I just fail to see
any net progress for mankind here.

> Part of the problem is that software requirements are not remotely
> static, and rapidly increasing demands on laptop processors means that

It doesn't have to be static. If the teeny MSP430 can go from total
hibernation to full bore and back in under 10usec one would expect the
PC or processor industry to figure that out as well.

My impression is that all the engineers that were this smart and able to
develop such truly practical products have either retired or been laid off.

If there was a machine that could do this with modern SW such as Eagle
I'd buy it instantly. But I guess the new Intels, IBMs or
Hewlett-Packards do not understand.

> because the loss of revenue would be too great.

I'm not sure what your definition of profit is but it appears to differ
from mine. If TV license fees are being used to fund BBC operations,
then any profit would be the tax revenue, less the expense to collect
it, less the expenses of the BBC.

> I'm surprised that they

That's a pretty strong and all encompassing statement. What makes you
think all of the UK government is incompetent.

Corporations (big or small) don't pay taxes??? Not the last time I
looked at the numbers.

If people are eligible for an EITC under the rules in place then they
should get it. Otherwise they shouldn't. Period.

> At least we
> don't have to license our TVs to the govt-a big advantage of not having
> an official broadcaster.

Nope, but we get to pay all sorts of income, sales, utility, property,
etc., taxes. Fact is it takes money to run a government and that money
comes from a variety of sources. And we use the tax structure to
support media access programs for the disadvantaged. Look at your
cable and telephone bill.

I bought a couple aftermarket Li batteries for the Nikon last time I
was in Hong Kong for a decent price (maybe $25 US for 7.4V 1500mAh--
that wasn't the lowest price-- cells made in Japan). You can now find
them domestically in North America for about that price, maybe a bit
cheaper. Also Li-polymer aftermarket batteries for my many years old
phone were cheap enough. Electronics that you keep in your pocket
doesn't seem to outlast the battery by much anyway.

BTW, the Nikon came with a holder that will accept 3 CR2 Li primary
cells, but I don't feel much attraction towards that option.

My PDA has a thin little 3.7V 1440 mAh Li ion battery, but also an
internal NiMH backup.

The 2500mAh cells are pretty heavy. They also self-discharge pretty
quickly. I can imagine a market for what you suggest, but it does not
seem to be the mainstream market. Maybe a $499 student laptop.

>I see why Li batteries almost have to be the future. Considering that I
>don't do my work much differently than in the 90's I just fail to see
>any net progress for mankind here.

But maybe you're not the main market. Yes, it seems like we are going backward or treading water. I had more battery life (in hours) from the NiCd battery (IIRC) on my pokey old CMOS 8088 T1000 laptop than on modern laptops. But it ran DOS and had no backlight. You couldn't watch DVD movies on it. No hard drive, in fact.

I think they have, it's just that big, bright TFT displays use a LOT of power, as do fast HDDs, and WinXP is such a pig that there are not that many chances for additional power saving. Even in desktop computers they throttle back the power quite significantly, and you can only cut the backlight so fast after the last event before the user gets ticked off.

Best regards,
Spehro Pefhany

Ok, Ulis, what's up with radiointel.com?
It isn't there. I get a page called ENSIM, "This page is a placeholder
for your future website"

You mean you don't see a net progress for yourself. Many actually do
work differently than in the 90's, demanding more from their laptops.
You can't blame the industry they quit making 640x480 screen laptops
with external floppy drive. Power is not the most important issue
for most laptop users. In a car you have your cigarettelighter, and
at a customer you plug in your power cord, if it is going to take a
while.

BTW, I remember a colleage who didn't carry a laptop around in those
days, but an entire PC - with a drawer handle screwed on top. He
borrowed the CRT at the customer's place. His priority was a good
tool at the workfloor and had little interest in playing with a
laptop during a 2 hour flight.

Hello Spehro,

> I bought a couple aftermarket Li batteries for the Nikon last time I
> was in Hong Kong for a decent price (maybe $25 US for 7.4V 1500mAh--
> that wasn't the lowest price-- cells made in Japan). ...

I paid around $10 for 6 AA Panasonic NiMH from Costco. That's 7.2V 2600mAh :-)

But they are bigger, of course.

> The 2500mAh cells are pretty heavy. They also self-discharge pretty
> quickly. I can imagine a market for what you suggest, but it does not
> seem to be the mainstream market. Maybe a $499 student laptop.
>

It's the chicken and egg situation. Mfgs fail to see market, therefore suitable gear isn't available, consequently market does not develop.

I can't count the number of occasions where biz travelers have corroborated my hesitance to take a laptop. Or sometimes even to buy one. Battery runtime was the number one reason. Many of them bought a Blackberry instead and have the office do the fancy stuff. That is because the Blackberry goes all day. Well, depending on how the patent skirmish comes out, maybe not.

The only thing IBM has ever sold in it's
entire existent are buisness cards that say:

"I'm an IBM salesman".
And AA cells don't fall under that heading.

AFAIK it is. Are you able to name ANY other AM radio station that
has been assigned that frequency slot?

> It is one of the old "Clear Channel" allocations that lets
>them run full power at night while the others reduce power or go off the
>air.

OK. That meant that other stations COULD be assigned that slot, but
to my knowledge none were. AFAIR there is a western US station set up
for the same purpose, but on a different frequency assignment.

As far as I know, it is handled at the OS level now.

You could search up the CPU in the device and then find out if it
has a slow mode or a sleep mode.

There are plenty of ACTIVE process threads that are ALWAYS running
on say an XP machine that did not exist on say a Win2K or DOS machine.

Event monitors, scheduler timers, Power management timers, etc. etc.
Mostly "advanced" GUI related.

Hello Roy,

>
> Have you booted DOS on both laptops and timed the battery life?

Only with the first laptop, a Dell Inspiron 2500, about 4 years old now. Did an OrCad schematic with more or less the same work pattern that I did on the Compaq. You know, drawing an amp and a mixer, thinking a bit, then drawing some more. The low battery warning came after about 1-1/4 hours. Ye olde Contura could run circles around that.

That one has a Li-Ion battery. The other one is NiMH and contains a faster processor so I assume it would have probably been worse there.

Regards, Joerg

My point, of course, is that $25 is a pittance. I'm hardly going to
want to lug around a heavier camera and worry about self-discharge for
the sake of saving 1% on the cost of the device. I'm very happy about
their design choice.

I'd would *like* 10 hour battery life, I *need* 100G (preferably 200G)
of HDD and a 2GHz-class processor to have all my info at hand. The
biggest thing I would like and can't get readily is a really high-res
display, such as 15" 1600 x 1200 touch-screen tablet, at least not
from a preferred supplier for a decent price. So the battery dies in 3
hours, no big deal, I'll plug it in when I get to the remote location.
It's a bonus it works at all without a wall plug. When they develop
in-flight always-on internet for free, I'll probably revisit the
thought, but maybe they'll have on-board power sources on the A380s by
then.

>I can't count the number of occasions where biz travelers have

Having spent some time recently looking at the issue, I don't think a
Blackberry or an IPAQ is going to substitute for a laptop for anything
by the most rudimentary e-mail purposes. I'm pretty sure many of us
will end up hauling *both* around. ;-) It is nice to be able to check
various things out while/st sitting in a coffee shop, though, even if
it is a bit cumbersome.

Best regards,
Spehro Pefhany

It is reallyhard to get high bandwidth with ferrite based loops. But
they are compact.

The Wellbrook gets you wide bandwidth, but you really need at least a
meter in diameter for the wellbrook to shine.

Every once in a while we read about another cell phone battery that has
blown up.That is because some people dont buy a proper battery for their
cell phones.The exact brand name and model of replacement batteries
should always be bought at stores that sell the same name brand of cell
phones.I wonder how many cheap off the wall brand name batteries have
blown up before and ruined some laptop computers?

AFAIR the Contura does it via the BIOS. I like that much better. It's
like driving a stick shift, the person usually knows better than a
machine when to shift. The machine can't see the sheet of ice coming ...

> You could search up the CPU in the device and then find out if it

Well, it's the Celeron. No luck there, plus the motherboard would have
to support that which the customer service folks told me it definitely
doesn't.

Nah, that's not quite so. I remember when they successfully set up computing centers in Europe where others had miserably failed. It was an excellent company but IMHO problems crept up when they did their huge round of reducing the median age of their employees. Many old hands were offered early retirement deals. The deals were pretty good so they took it but those were the folks who really knew stuff.

1441. US Evangelicals repent, break with White House over climate change

Newsgroup: rec.radio.shortwave
Date: 2006-02-09 22:06:31 UTC
From: David <rickets@knac.com>

US Evangelicals repent, break with White House over climate change
-09/02/06

Evangelicals, who have claimed credit for helping George Bush into the White House, have broken with the US president, and demanded action to tackle climate change and avert a global disaster.

In an apparent act of repentance for their slowness in realising the scale of the problem, eighty-six prominent figures in the movement, among them leading pastors, the heads of evangelical colleges, religious broadcasters and the Salvation Army, released a statement yesterday (Wednesday) warning that "millions of people could die this century" because of global warming - most of them in the earth's poorest regions.

They pledged their support for proposed legislation, opposed by the White House, to cut carbon dioxide emissions.

Until recently global warming has not been a priority for evangelicals, most familiar for their uncompromising stances on social issues such as abortion and gay marriage, and their emphasis on the nuclear family. "Many of us required considerable convincing" that it was a problem, the statement acknowledges. But, it declared: "Now we have seen and heard enough."

It will be taken as a welcome sign by many Christians that conservatives are expanding their previously narrow political agenda.

Jim Wallis of Sojourners in the US, whose book on the Religious Right will be launched in the UK next week, is amongst those who have urged conservatives to broaden their horizons.

The evangelical manifesto will be followed up with information campaigns at evangelical churches, schools and universities across the US, supported by radio and television broadcasts.

A TV ad will declare; "With God's help, we can stop global warming for our kids, our world and our Lord".

All will spread the message that the government must act to curb carbon dioxide emissions, preferably by "cost-effective, market-based mechanisms".

That last is a nod in the direction of the business community, which evangelicals have generally supported in the past. But the new urgency - spurred by Hurricane Katrina and by the devastation of drought and starvation, witnessed first hand by evangelical missionaries in the

Third World - is striking nonetheless.

The initiative is actively opposed by some of the biggest names in the movement - among them James Dobson, the head of the influential conservative group Focus on the Family, who signed a public letter last month claiming "global warming is not a consensus issue", and urging the National Association of Evangelicals, the movement's umbrella group, not to take a position on it.

Thus far the association has not done so - but there is little doubt which way it is moving. Although neither Ted Haggard, its president, nor the Rev Richard Cizik, the vice-president, has signed the manifesto, the latter made his feelings plain in a television interview last month. "We, as evangelical Christians, have a responsibility to God, who owns this property we call Earth," Mr Cizik told the PBS public broadcasting network. "We don't own it. We're simply to be stewards of it. And if climate change is occurring, can we simply ... pretend it isn't happening?".

However, the names of most of the president's most influential Christian political backers were notably absent from the list of signatories joining the campaign. Possibly the best-known signer was Rick Warren, author of the best-selling book, "The Purpose Driven Life."

The Christian leaders said they were impelled by their faith to launch the campaign out of a growing realization that the threat of global warming was real and that the world's poor would suffer the most.

Paul de Vries, president of New York Divinity School, said: "However we treat the world, that's how we are treating Jesus because He is the cosmic glue."

The leaders said a poll they commissioned of 1,000 evangelical Protestants showed that two thirds were convinced global warming was taking place. Additionally, 63 percent said the United States must start to address the issue immediately and half said it must act even if there was a high economic cost.

Such sentiments are not those of the Bush White House, which has resolutely played down climate change and mankind's responsibility for it. Arguing that market forces will resolve the problem, it has regularly tried to gag anyone in the administration who suggests otherwise.

But unease among evangelicals will only have grown after last week's State of the Union address, in which Mr Bush - though he referred to America's "addiction to oil" - did not once mention climate change or global warming. And their unease will not be easy to ignore, given the political importance of the evangelical vote. In 2004 it split four to one in favour of Mr Bush, accounting for a third of his support.

Yesterday's statement is also proof of how religious groups feel increasingly obliged to speak out on global warming. The trend has seen the religious right make common cause with liberal Episcopalians and others on the "religious left", joined by some Orthodox, Catholic and Jewish groups. In 15 states, interdenominational groups are seeking regional standards to reduce emissions, Paul Gorman, director of the National Religious Partnership for the Environment, told The New York Times.

The campaign by evangelicals coincided with a call on Wednesday by a U.S. think tank for the United States to take immediate steps to fight global warming, including working with other nations to reduce greenhouse gas emissions.

The Pew Centre for Global Climate Change said in a report that America has waited too long to seriously tackle the climate change problem and spelled out 15 steps the United States could take to reduce emissions it spews as the world's biggest energy consumer and producer of greenhouse gases.

"This transition will not be easy, but it is crucial to begin now," the Pew Centre said. "Further delay will only make the challenge before us more daunting and more costly."

JG,

I agree with everyone here that coax is better but so far noone has
mentioned there are two types of coax, 50 ohm and 75 ohm. Make sure
that you use the 75 ohm coax. 50 ohm is generally used for
communications and you can't tell the difference between the two by the
size or thickness of the coax. You can tell by the number stamped on
the coax, eg. RG75U, etc.

J

If you want the best weak signal reception (San Francisco) either use new twinlead all the way from the antenna to the TV or new coax all the way with an antenna amplifier too. You might want to consider an antenna rotator if the local and distant stations are in different directions. BTW- If you use twinlead, install it with a continuous twist along it's length. Make several twists per yard. I know it's a pain to do this but it helps to reduce the reception of noise from home applicances on the twinlead.

1453. CHU Time Station : Western Canada Coverage Proposal // Fax to NRC is Ottawa SVP

Newsgroup: rec.radio.shortwave
Date: 2006-02-09 23:09:51 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <dsgnui$2rf$1@gnus01.u.washington.edu>
Source record: 61869

CHU Time Station : Western Canada Coverage Proposal

The CHU time station is Canada's domestic shortwave time signal station.
CHU existed long before the Internet and satellite navigation systems like
(GPS, GLONASS, Galileo).

CHU provides most of the functionality of the US WWV & WWVB (Bolder,
Colorado) and WWVH (Kauai, Hawaii).

Problems with CHU's configuration that this proposal addresses

* The 3.3�s per km of path that makes CHU's signals problematic for users in
Western Canada. Even the NRC realizes this: "for all distant users of CHU,
the dominant source of time error comes from the radio wave path reflecting
off the ionosphere as the radio signal travels from the transmitter".

* The poor quality of CHU reception in Western Canada and the Artic, North
of 55° Latitude.

It is suggested that the 7335 kHz frequency be reused, but it may be
advisable to find alternate frequencies. The CHU signal format may need to
be tweaked so as to take into consideration 2 transmitter sites.

- A new set of atomic clocks will be needed, as well as equipment to sync
them to NRC's atomic clocks.
- It may be possible to obtain secondhand atomic clocks from UBC (Vancouver)
or other universities in Western Canada.
- This proposal could be replicated in Newfoundland using another existing
CHU frequency, as Eastern Canada has CHU coverage problems as well.
- Universally upgrading CHU's Ottawa transmitters to 10 kw may not fix CHU
coverage problems in Western or Eastern Canada.

Passport 2006 says that Voice of America will be eliminated entirely and resources shifted to other radio and TV ventures of the US govt. This means that real programming will be dumped in favor of music services and that lame Al Houri satellite TV channel that nobody watches.

Al Houri was a good idea, especially considering that more Arabs watch satellite TV than listen to shortwave, but like everything else in the war on terror the Bushies have completely fucked it up. EVERYBODY knows that it is a propaganda arm of the US govt, and therefore NOBODY watches it except when Saddam's trial is on. Don't get me started on Radio Sawa.

It seems that SW services around the world are severely being curtailed except for countries like China which are far from an unbiased source. At least Radio Havana is interesting (sometimes) and occasionally drops a real bombshell that makes it on to the US evening news three nights later.

In today's unstable geopolitical environment, I think cutting back on shortwave will prove to be a real mistake. The BBC didn't bother to serve Nepal except on FM until the king clamped down. The Beeb's FM station in Kathmandu was shut down and the reporters arrested. Suddenly, the Beeb was redirecting SW transmissions to Nepal to serve the Nepalese.

SW has proven its utility in places like Zimbabwe and China where the populace is limited in the news they can get from the outside world and where asking the wrong questions can make you disappear. Don't think that a clampdown can't happen in America, or a revolution in Saudi Arabia, or an insurgent victory in Iraq. Then people would see how much of a mistake it was to cut shortwave.

In the 2006 Passport there's a picture of an American SW transmitter
that somehow fell into the hands of the Red Chinese and was used in the
civil war that Mao won. Said tx is now in a Chinese museum.

True, I was only mentioning it for laptop use, not small gear. A camera or cell phone needs the highest energy density one can pack. But the trend for thing like cell phone goes into the laptop/OS/SW direction. Lots of gimmicks added that are mostly of little practical use yet they guzzle watt hours.

Finally that we can receive a signal here in the office I am going to get a cell phone. The simplest one they have already comes with color screen, games and you name it. What for? All I need is to dial a number and talk.

Regards, Joerg

Maybe. :)

>(It is pretty good as it is.) The exiting flat cable is starting to
>fall apart at some places. Currently I just have it directly wired to
>my coax cable (just before it enters the house) with out any type of
>transformer.

How did you do that? Soldered one wire to the center and the other to
the braid? I'm curious, but as others have said, you should redo it,
and run straightaway to a tv or a signal splitter, if you want to go
to more than one tv. They still sell them for flat lead.

I would also pay attention to the way the wire is run now. Flat lead
should have stand-offs to keep it away from the pole and the siding,
and as someone pointed out, it should be twisted I can imagine that
some prior amateur or neat-freak kept the wire untwisted because he
thought it looked better. So if they didn't do a good job the last
time, your job can be better. (The interference will still try to
interfere, but its effect on one part of the flat-lead will be exactly
the opposit of its effect on the other part of the wire, so the two
effects will cancel each other out. Hence, no interference. This is
similar to the reason that wires from burglar alarm sensors use
twisted pairs of wires, so that lightening won't generate a voltage
spike in the wires that will damage the control panel (or set off the
alarm?).

>The coax is properly grounded (to the circuit breaker
>box.)
>
>So my questions are these:
>
>1. How do I connect the coax directly to the antenna? Or should I?

They're not so much heavy duty as they are designed to keep the
insides dry, with the rubber cover and all.

Russian scientist predicts 'mini Ice Age'

A Russian astronomer has predicted that Earth will experience a "mini Ice Age" in the middle of this century, caused by low solar activity.

Khabibullo Abdusamatov of the Pulkovo Astronomic Observatory in St. Petersburg said Monday that temperatures will begin falling six or seven years from now, when global warming caused by increased solar activity in the 20th century reaches its peak, RIA Novosti reported.

The coldest period will occur 15 to 20 years after a major solar output decline between 2035 and 2045, Abdusamatov said.

Dramatic changes in the earth's surface temperatures are an ordinary phenomenon, not an anomaly, he said, and result from variations in the sun's energy output and ultraviolet radiation.

The Northern Hemisphere's most recent cool-down period occurred between 1645 and 1705. The resulting period, known as the Little Ice Age, left canals in the Netherlands frozen solid and forced people in Greenland to abandon their houses to glaciers, the scientist said.

As I've said before, you really need to go to business school. That way these
things won't be such a mystery (or conspiracy) to you.

It's working for me.

I'm kind of surprised they don't yet have anything up about the KWZ30-2.

<rant_mode>
I bet that much of that isn't really needed. Then there are the memory
leaks from sloppy programming, TSR type of programs that are abandoned,
gimmicks, defaults nobody selected, auto-update baloney and so on.
</rant_mode>

Regards, Joerg

Kind of like your small brain huh Wogie. But we all know that how small your brain is. It's exhibited by the IQ you show every time you open your freezer mouth. I guess in that case your freezer mouth should not be accepting all that meat.

You'll probably quickly find that many of the clever 'features' are
designed to channel moolah from your wallet into their coffers.
Downloadable ringtones (charge each), web browsing (extra charge),
camera (costs to get photos out of it) etc. etc. Of the free
features, they really don't cost much. You've already got a ton of
processing power in those things. The features I use most- phone
(dunh), clock/calendar (when I don't have a watch on), and calculator
(comes in *really* handy at times to have a 4-function calculator).
voice dialing is the handiest sophisticated feature.

Best regards,

I'm on the record that I rather take my chances with terrorists than live in George Bush's police state.

Every time you hear about a plot the Bushies stopped, it is just hilarious. There was that idiot from Ohio that was going to bring the Brooklyn Bridge down by cutting the cables one by one with a blowtorch. Then there was the plot Shrub revealed today where they were going to use shoe bombs to get the airplane cockpit door open. You don't think some whack job hanging out by the cockpit door wouldn't arouse some suspicion? Pa-lese.

Let's not forget that the so-called "dirty bomber" Jose Padilla didn't have any "dirt" (nuclear material). In fact, the Bushies took his case to federal court and dropped that charge.

I recall someone posted a rather long technical explanation that there
is more noise that is vertically polarized than horizontally polarized.
That is, noise will propagate better vertically polarized, which is why
the whip is a bad idea. It may not be just an issue of finding a quiet
spot, but the basic design might be flawed.

My bad, it's the BBC. Don't know why I wrote VOA. Apparently the signal is in the background of BBC 5975, then oddly enough disappears for 20 khz, then reappears on 5995. It's the same signal, I checked, but it's not audible on 5985. I wonder if it's a transmitter problem rather than just splatter.

If its incandescent? No light. If its fluorescent? Maybe. It
depends on the stray RF and the antenna design.

Inside the now gone VOA Bethany transmitter site (Mason, Ohio) they
would stand a four foot fluorescent tube in the corner, and it would
light to full brightness. They had to put it in a metal locker to
extinguish the light.

BTW, I got to see the legendary 500 KW WLW transmitter back in the
late '60s, or '70 while I was in high school. talk about an impressive
antique! WLW and WSAI are just down the road from the old VOA site.

You seem to be in the minority. The terrorists do not fear death, while Americans cower at the thought of it. America can't stand to make any sacrifice, no matter how small, while the terrorists are blowing themselves up. Americans dare to call themselves brave when they refuse to sacrifice their lives for their country. Americans willingly give in to fear. They elect a president based on fear. To me, it looks like the terrorists are far braver than most Americans. If you listen to the phone calls from the doomed in the WTC, all you hear is whine whine whine. Nobody thought to look for a way out-one of the staircases in one of the towers was intact, but only 14 people found it and made their way down. The rest sat and cried like babies.

Even more hilarious was the frantic reaction to this. They're adapting, they're making up new avenues of attack, they're too smart. Pundit after pundit spouting fear. Suck it up, you big babies!

> Let's not forget that the so-called "dirty bomber" Jose Padilla didn't
> have any "dirt" (nuclear material). In fact, the Bushies took his case
> to federal court and dropped that charge.

I remember when Padilla supposedly was out to collapse a Chicago high rise apartment building by renting a corner apartment, filling it with explosives, and detonating it. They couldn't prove that, either. Imagine that it's six months after 9-11, and the new tenant on the 53rd floor is hauling in a LOT of luggage at strange hours. Wouldn't you be suspicious? They supposedly planned to blow up the Prudential building in Newark, New Jersey by filling a limo with explosives, like that would work. Is it just me, or is nobody on earth this stupid except the Bushie spinners who make up this shit in order to convince us that they're protecting us? How come they never come out and say, we stopped six guys who planned to use briefcase bombs to wreak havoc on the NYC subway? No, it has to be some convoluted plan that would never work. If this is what

the Bushies are planning to stop, they're looking in the wrong direction.

Actually its funny to watch these people calling each other communists when more than likely you have a more conservative individual and then a liberal individual. Which in turn is totally opposite of the masters idea of controlling people. To have a functioning republic you have to have diversity of opinion otherwise you have a dictatorship;.

hahahah... CE is now L3 Communications in Cincy. CE WAS Avco
Electronics. I had more than a couple jobs in the Woodlawn area...
(I know, CE was not in Woodlawn, but close).

Jeez... Delhi must have been the only "outside the box" cable
company in Cincinnati. The rest of the town (at least hamilton county)
is wired with Time/Warner, which at that time was the dual feed QUBE
system. Talk about heavy drops.

I have pulled quite a few drops in Cincinnati. One of the longest
residential drops to date, and I wired Paul Brown's (Cincinnati Bengal
fame) house, which was a drop I had to climb trees in a woods to pull.
Not fun!

Cool. A tube amp of that power level is probably some sight indeed.
WSAI moved later, but yeah. Before FM, it was the pop radio station
in town! The FM station was WEBN, and WKRQ.

WEBN and Pepsi and Toyota still hold one of the nation's largest
annual Labor day fireworks displays. It is usually bigger than the
one NYC did for the statue of liberty refurb unveiling.

They started out with just Pepsi sponsoring, and a couple thousand
dollar display. Now, they fill two sets of two river barges, and hold
two simultaneous duplicate displays at over $40k cost synchronized to
a multi-genre musical score! The absolute best seat to have (If you
are not a family and picnicking) is to be driving by on I-71 at the
time, stop on the highway, pull over and watch, then leave immediately
after to avoid the two hour plus clog that occurs.

Great town... hate the winters. After being gone 15 years, I find
out that the whole town has turned into a gang boy haven.

Indeed, I was surprised that even the lower cost phones contain a basic calculator. But those ring tones I'll never understand. Some kid downloads a new 'deedle doodle dum trallala', that'll be a buck fifty. Cha-ching. Plus some pics, some text messages and here goes the allowance.

It would be nice if those phones were more compatible in terms of programming and less restrictive in the process. Blessing by the individual manufacturers, membership in some 'programming elite club' and all that. There are a lot of applications one could write but it doesn't make sense if you can't offer them universally and all at once to all subscribers.

Regards, Joerg

L3-com has been buying up a lot of small electronics companies and
destroying them. I lost my job when they closed the Microdyne plant in
Ocala.

> Jeez... Delhi must have been the only "outside the box" cable
> company in Cincinnati. The rest of the town (at least hamilton county)

QUBE = wo 36 channel plants and twice the outages.

Don't forget Metrovision, which had a small area adjacent to United
Video. (Greene township?) I had to design the interface between two
community loops, one sub split, the other mid split. I did it with a
single RCA heterodyne converter at the interconnect point, and two more
in our headend. It cost us less than $5,000, compared to the $30,000 +
they wanted us to spend. The head tech supervised the connection of the
two systems, then informed me that my gain calculations were off by +.5
dB at the interconnect point which was over two miles from the headend.
;-)

I can't remember the name of cable company that had Middletown, but
they reached into the northern edge of Hamilton county, as well. They
had an opening for someone in their design office to do strand mapping.
I was the only one who applied that even knew what a strand map was, but
I wasn't familiar with their mapping software, so they hired an
architect to train him to do strand maps.

I didn't do field work, except emergencies, and a little local access camera work. The worst job we had was Johnny bench's home where we had to install two drops, one at each end of the house. One of his TV sets was on a floating platform in his pool. The installers spent a whole day doing that job. They could do 3. 12 unit apartment buildings in the same time and make a lot more money, so they were rather pissed off.

I left Ohio in 1987, and I have lost contact with almost everyone
that I knew up there. My favorite stations were WZIP FM, before it was
sold and changed from country music to WWEZ, Easy Listening. I started

listening to WUBE after that, until I left the state. I went to a number of the country music concerts sponsored by WUBE, but their best was a fake concert they did on air, billed as "The greatest concert that never was!" It would have cost millions to just get all the groups there, but they did a great job and made it more realistic by not running any commercials the whole time.

White LED. Coil of wire, powerful magnet that slides back and forth
through the coil when shaken, diode bridge, capacitor. The coil is
on the order of an inch in diameter; I don't know how many turns.

W6JN tells me he once measured the KNX field strength at 8V/meter at
ground level outside the fence, where they just built the new
condos.

You haven't told us what type of tv antenna you have, and whether or not you have a rotor. To get San Francisco stations in your area, you must use a rotor as the Sacramento stations and the San Francisco stations are not coming from the same direction. Also, to get the UHF stations from San Francisco, I recommend the Channel Master 8-bay bowtie. It is very common in Sacramento to have separate VHF and UHF antennas as it is fairly easy to get decent reception from San Francisco, Santa Rosa, Concord, Chico, Redding, Reno, and even more, as well as all the local stations. But you MUST have a high-gain antenna with a narrow beamwidth. Otherwise, the local stations will interfere with the distant stations. As in Fresno (where I now live), with a high-gain antenna with a narrow beamwidth, it is possible to get more than one station on the SAME channel, just by turning the antenna. I recommend NOT using any pre-amp at the antenna as the powerful Sacramento stations will wipe out most of the distant stations. Generally speaking, in the Sacramento area good coax cable will work better than twin lead, especially if you are around any electrical interference. Also, even twisted twin line can pick up signals that may interfere with the distant signals. But DON'T have several feet of coax wound up in your attic. Every foot of lead, whether twin lead or coax, adds to signal loss. Generally speaking, the antenna should be mounted as high as possible, although this is not always the case, especially with UHF signals. There is never a guarantee as to what you will receive. As far as using a balum at the antenna (and at the tv if necessary), all balums are NOT created equal. Different samples from the same manufacturer can vary greatly in the amount of signal loss, etc., especially at the UHF frequencies. For the antenna AND balum, I recommend staying away from Radio Shack. In Sacramento, the most popular antennas for picking up San Francisco, are made by Winegard and Channel Master. The BEST UHF antenna you can use is the Channel Master 7-foot parabolic but strong winds can cause problems if the mast is not strong enough. I used the 7-foot parabolic on a 30-ft. mast with rotor and got excellent reception from most of the UHF stations from San Francisco. Second best is the 8-bay bowtie. For more information, read my article in RADIO ELECTRONICS magazine, August 1982, titled HOW TO SELECT THE BEST TV ANTENNA. You should be able to find that issue at a library.

How did I connect the twinlead to the coax? I used two cones and twisted them. Center to one lead, outside to the other lead. This was meant to be a temporary solution (two years ago.)

At any rate I have one more question, if I go twinlead all the way from the antenna to the TV (almost to the TV, I'll have to switch over just before cable runs up the wall behind my tv) should I be concerned with grounding? As I explained before, coax is well grounded just before entering crawlspace. Will I need to do the same for twinlead?

You can't expect good reception by mixing the two kinds of cable.
Use one or the other. Coax is preferred. You get less ghosts with
coax, and most likely better signal. Depending on your directions, an
antenna rotor may benefit you. That way you can point it toward
SanFrancisco or your local towers.

BTW: Coax is easier to install. You dont need all those standoffs and
stuff.

Yes, this is correct. Most hardware stores only carry the 75 ohm
RG75U these days. The 50 ohm was popular in the 70's and 80's during
the CB radio craze, but is seldom used these days except by amateur
radio people and the few that still use CB. In fact Radio Shack no
longer carries the 50 ohm cable in bulk. I wanted a piece for my
scanner and they only had pre-made cables, and not the lengths even
close to what I needed. I finally chopped a piece off an old CB
antenna and soldered on my own ends.

Geeezzzz, I'm having a brain fart.... Is that RG50U.... ????
Don't sound right.... The older I get the more my memory fades !!!

Yes. In Cincinnati, from an installer's POV post wire was where it
was at, and there wasn't much prewire going on yet.

I have "popped and dropped" up to 37 units a day with a three man
crew. Somebody else did the UG burials to the lock box.

I was just a kid with a fresh job, so I am not "cable trash" but I
sure worked with a lot of folks from other cities that drifted through
that were.

>twisted them. Center to one lead, outside to the other lead. This was
>meant to be a temporary solution (two years ago.)

LOL

My mother paid a tv guy to connect our tvs to the rooftop antenna,
back in 1957. When I was in the attic several years later, a little
before she was going to move, I saw that he had just twisted the wires
together, even though there was a flatlead antennal splitter hanging
right there, not being used.

>At any rate I have one more question, if I go twinlead all the way from
>the antenna to the TV (almost to the TV, I'll have to switch over just
>before cable runs up the wall behind my tv) should I be concerned with
>grounding? '

The purpose of grounding iirc is for lightening protection.
Lightening protection is NOT accomplished by providing a path for the
lightening to reach the earth. A conductor would have to be enormous
to accomplish that (as big as your thigh?).. It's accomplished by
providing a path for excessive charge in the antenna or any piece of
high metal to dissipate to the earth, so that the lighening will not
be attracted by that charge.

> As I explained before, coax is well grounded just before
>entering crawlspace. Will I need to do the same for twinlead?

This question is beyond me.

Remove NOPSAM to email me. Please let
me know if you have posted also.

I couldn't tell you what kind of antenna I have if my life depended on it. It is big and it is very high. At least 40 feet high. If memory serves correctly, I only have one antenna for both VHF and UHF. (Too dark to see right now.)

As for the direction, both the Sacramento and the San Francisco stations are in the same general direction. I am about 40 miles East of Sacramento and given that the Sac antennas are in the Delta by Stockton, I pick up San Fran stations as well. Ironically the station that I really want to pick up does not come in at all, it is Channel 19. (I want my kids to watch Spanish cartoons and I refuse to pay for cable.) I think Channel 19 is East of Modesto some place. (I had a link to a site that pinpointed all towers on a map but I have since lost it. Maybe someone here knows of the site.)

So as of earlier reading I was leaning towards coax, then twinlead (to minimize loss) and now I'm confused all over again.

This is basically a summary of what I have gleaned from you gusy...

Coax:
Pros:
--Easy to install.
--Less suseptible to interferance.
--I have a huge roll ready for deployment.
Cons:
--More lossy

Twinlead:
Pros:
--Less lossy
Cons:
--More difficult to install.
--Must twist.
--Must purchase about 100 ft.
--Must purchase hardware to keep away from mast and wall.

Come the weekend, I'm doing one or the other... so I better decide by then.

Thanx again to all who replied.

jg

It was Ken's sarcastic way of saying that I had hit the target dead on, and that he had lost our bet. The specs allowed for +- 6 dB at the interconnect point, and he had bet me that I couldn't get closer than +- 4 dB before he left the shop. Also, the community loop was never fully spliced and tested till that day.

The "Cable gypsies? United Video had to hire them from time to time,
but 95% of our work was done by full time employees. There is nothing
wrong with cable work, as long as you do good work. We had a pretty
good crew of installers and service techs. We had an aggressive PM
program, and repaired 99% of our electronics in house. I took care of
everything from converters, line equipment, headend equipment and
computers for our system, plus a lot of headend gear and satellite
receivers for the rest of the corporation. I repaired over 10,000
pieces of equipment in four years, and saved the corporation several
million dollars.

Dale [W4OP] - CC&Rs :o) ~ RHF

What Are CC&Rs?
The Covenants, Conditions and Restrictions (CC&Rs)
Are the Governing Documents that Dictate how the
Home Owners Association operates and what Rules
the Owners -- and their Tenants and Guests -- must obey.
http://www.realtor.com/BASICS/condos/ccr.asp?poe=realtor

One of the few Legally recognized OutSide Antenna
CC&R 'get arounds' (Loop Holes) are the small Dish
Antennas used with Direct Distribution Satellite TV
(DDS-TV) Broadcasting.

NOTE - Some HOAs try to say that the development or
building is wired for Cable and therefore the OutSide
Dish Antenna is Not Allowed [.] - - - Oops then came
DDS-TV of Foreign Cultural and Language Programs
from Mexico, India, China, etc and the Ethnic (Racial)
Discrimination Lawyers opened up the World to DDS-TV
with a high percentage of Condo Balconies having a
small Satellite Dish or two :o)

Using the Dish with a small Active Antenna is just a way
of getting around the CC&Rs and provides a fairly secure
mounting structure for the Active Antenna.

1548. Antenna Directionality - Question : At What Length Does An Antenna Begin To Have Directional Characteristics ?

Newsgroup: rec.radio.shortwave
Date: 2006-02-10 10:02:38 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1139565758.603900.144640@f14g2000cwb.googlegroups.com>
Source record: 61899

Junius Asks - "At what length does an antenna
begin to have directional characteristics?"

Different Antennas have Different Directional Characteristics :
[All other things being perfect and technically correct :<]

1/4 WL Vertical Wire Antenna - Omni {Full Circle}

1/2 WL Dipole Wire Antenna - The Broad Sides

1 1/2 WL Long Wire Antenna - The Far End

Note - Since this is expressed in Wave Lengths (WL)
these are the General Directional Characteristics at that
Specific Frequency (WL) Only and at other Frequencies
up-or-down the Spectrum then the Propagation Pattern
of the Antenna may vary slightly or very radically.

OBTW - Lack of any Directional Characteristics can be
viewed as a Directional Characteristic of sorts - of course ! :o)

so now let the real facts and personal opinions begin . . .
as to what is what -and- what is not - iane ~ RHF

Your best off to use RG6, if using coax. Its lower loss than the more common RG59

You can avoid all these issues by getting satellite TV! In most areas of the country they carry lour locals.

all conveient on one pizza pan sized dish, and bets of all they have DVR, digital tv recorders built in.

you record what you want, to watch anytiome you care to, and can skip thru commercials. one version is called TIVO. a hour of prime time has 15 minutes of commercials, well thats now my time to do with as I wish!

satellite tv has free installs, with no commitments if you get the right package. you have nothing to lose!

RG-6/U is 75 Ohm. RG-58/U is still fairly common for ethernet.

>Here it is again:

At HF it is even more true. This does not have anything to do with the source- which generally emits random polarization, it has to do with Maxwell's laws of EM . The end result is that only vertical component of the noise EM wave can propagate across the surface of a conductor (earth in this case). Seem to recall this is termed the surface wave solution. Note however, that sources really close in can still be randomly polarized.

Dale W4OP

I think one of the potential problems with active antennas would be if the user does not use a good RF ground at the antenna- without it, the outershield of the coax can become part of the antenna, or transport noise from the house back to the antenna for pick up. I have always made my own active antennas, so have not seen commercial manuals. Perhaps they address this issue.

It's all but imposible to figure out what happened from the skimpy
details provided. If you really want an answer then provide the
background of the lawsuit, and what wrong the judgement was supposed to
cure.

I don't see anything in your post that ties this lawsuit to the KMart
purchase, but maybe you are just trolling for any response rather than
information.

The website you are referring to is located at:
http://www.antennaweb.org/aw/Address.aspx - but be careful using this site. With your zip code, you might get the idea that your local stations and the San Francisco stations are in the same direction. NOT SO. They list so many channels in that same GENERAL direction that you really can't decipher from that website which direction the signal is coming from.

The Sacramento and San Francisco stations are NOT located in the exact same direction. That is why you need a highly directional antenna with a very narrow beamwidth. You can separate the locals from the Bay Area stations. You can "pick up" the San Francisco stations when the antenna is pointed towards the Sacramento towers, but you can get a STRONGER signal when turning the antenna towards Mt. Sutro (San Francisco towers), and at the same time, REDUCE the local signals, thus giving you a stronger signal with less interference. To help clear up the confusion between coax and twin lead -- First, twin lead must be installed properly - not touching any metal to say the least, as it should be a few inches from any metal. It's not good to install twin lead between walls, etc. As far as loss goes, coax is consistant regardless of the weather. Twin lead losses can be greater than coax during wet or damp weather. To have low loss, twin lead must be dry. Also, twin lead is more suseptible to breakage during high winds. You want the SAME lead in all the way from the antenna to the television. Don't mix twin lead with coax. You might get excellent reception of the local channels, but it can make a big difference on distant reception. IF your antenna is high gain on UHF, has good directional characterics, you should easily get channel 19 from Modesto UNLESS there is a mountain near you blocking signals from that direction. However, channel 14 in San Francisco is also Univision. I have picked up weak signals from channel 14 even here in Fresno. I can tell you this - When living in Fair Oaks, I had the largest Channel Master UHF/VHF antenna available, installed on a 40-ft mast with rotor and I could NOT get any signal on channel 14. But my neighor had a cheap, small antenna mounted on the chimney and got a good signal on channel 14. Higher is not always better on UHF. Also, ANY bad balum OR even twisting wires combining coax to twin line can totally wipe out some UHF frequencies.

The K7RA Solar Update

SEATTLE, WA, Feb 10, 2006--Our sun is very quiet. The daily sunspot reading was zero each day from January 29 through February 7! The last time we saw 10 consecutive days with a sunspot number of zero was way back on the other side of the solar cycle, from December 24, 1996 to January 3, 1997. Prior to that, from September 13, 1996 through October 20 1996 were 38 days with a sunspot number of zero. Perhaps a year from now we'll again see a whole month with no sunspots.

Compared with last week, the average sunspot number declined by more than 7 points to 1.7. Average daily solar flux was down more than 4 points to 76.

Sunspot numbers and solar flux should rise over the next few days, but not by much. Geomagnetic conditions also look quiet, with the next period of high geomagnetic activity set for February 22. This is based upon the previous rotation of the sun.

A fascinating e-mail arrived this week from Larry Putman, WB3ANQ, of Pasadena, Maryland. He described working VK6DI in Western Australia on 30 meters using very slow-speed CW (QRSS), while running just 961 microwatts--less than 1 mW--over an 11,558-mile path. Larry used an old Hewlett-Packard HP-3336 signal generator as a transmitter feeding a 30-meter half-wave inverted V. To achieve the low output power and measure it precisely, he used a precision attenuator and measured the signal with an HP-3586C selective level meter.

But Larry didn't depend on the station at the far end to copy by ear. In QRSS mode Morse code elements are extended considerably, so the speed can work out to less than one WPM. Deciphering QRSS is accomplished by feeding the audio into a computer sound card, and detecting it with ARGO software. This is the same technique that many very low-frequency (VLF) operators use.

There's more information on this mode of communication on the "QRSS and You" Web page. Larry details his operation on his own Web site. You can see the Web page of VK6DI on the receiving end too. And you can learn about the efforts of a group called the

QRSS Knights. Also
check out ON7YD's page on extreme narrowband techniques.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for February 2 through 8 were 0, 0, 0, 0, 0, 0 and 12, with a mean of 1.7. The
10.7 cm flux was 77.3, 78.7, 77, 76.3, 74.9, 74, and 74, with a mean of 76. Estimated planetary
A indices were 3, 4, 4, 3, 12, 4 and 3, with a mean of 4.7. Estimated mid-latitude A indices were
1, 3, 3, 3, 11, 4 and 2, with a mean of 3.9.

I think it's just two transmitters at Delano, one will be doing the
BBC Spanish on 5995, and the other BBC English on 5975. They're warming
them up at the same time at the same site, so they're probably using
the same canned audio signal.

Is the antenna 40-ft high from the ground or roof top? How do you get up to it? With an antenna that high you want to do it right the first time. I strongly suggest getting a new antenna with a good UHF front-end and a rotator to fine tune the aiming. An antenna amplifier would be a good investment too. I would use coax because it's stronger and more durable than twinlead. This will minimize the possibility of a broken downlead, requiring you to go back up to the antenna.
Be very careful with this project. Have a helper close by and look out for power lines that might come in contact with the antenna and mast.
Good luck.

True, that's at 20oC, but it sure beats self-discharge of 2-to-4%
per *day*, which is the performance of current cells. I measured just
one Panasonic cell: 2.6% / day.

With this new 'Eneloop' NiMH cell, Sanyo has effectively matched one
of LiIon's compelling advantages, IMHO, plus it drops into the whole
Nixxx infrastructure of devices and chargers. And, of course, the
ability to get alkaline replacements in a pinch just about anywhere in
the world.

I still love LiIon cells, don't get me wrong, but these Eneloops will
find a place in my gadgets to be sure.

Best,
James Arthur

In that particular area, you have to be very careful using an antenna amplifier, especially if you are talking about a pre-amp mounted at the antenna. Only a professional will know which amp will work in that area. Some of the Sacramento signals are so strong on UHF that the pre-amp can do more harm than good. Remember, doubling a weak signal will help, but also doubling that very strong signal can put that signal all over the dial. I had a pre-amp in a large directional antenna in Sacramento and had to have it removed. I couldn't get ANY distant channel as all the locals wiped them out. Using a weak amp MIGHT help in this case. You CAN NOT improve the signal-to-noise ratio at the antenna. What you hope to achieve is to keep as much of that signal as possible. In other words, to reduce the lead losses. But ALL pre-amps/amps introduce some noise. You can't get a better signal that what you are getting at the antenna, no matter what you do.

You might check with dealers in your area. But I have an idea that if you replaced your lead to just ONE coax cable from antenna to tv, you'd see a major improvement in reception from San Francisco and/or Modesto.

Be aware that although antennas exhibit directional characteristics - the beam width at HF frequencies can be quite wide

Beam width is measured at th 3db points

A yagi might have a beamwidth of 30 to 60 degrees - but at the 3dB point an s-meter on the other end might show only a half an s-unit decrease. There is plenth of energy beyond the 3dB points.

Dipole beamwidths can be much as 130 degrees depending on height above ground.

For some radiation patterns see
http://www.moonraker.com.au/techni/patterns2.htm

What receiver and antenna and location were you using? Just curious.

There are some types of fuel cell batteries being developed for laptop computers and various other kinds of devices.Once in a while there is news about that at, www.gizmodo.com and other computer news websites.I dont see why solar cells attached to laptop computers wouldn't extend the battery life.

Here's a link to a picture of my antenna, maybe someone can tell me what I have. Also, does the fact that the "receivers" are off place and therefore touching affect the signal? Since I will be up there, I will straighten them, but odds are they will get crossed again. (I've aready fixed this in the past.)

If you want a really detailed list, www.fcc.gov has database search
pages for various services. I can't remember the exact URL, but
go to the FCC site, then the pages for the "Media Bureau" and then
there'll be links to television and other broadcast databases.

When you find the query page, you feed it your latitude and longitude
in Degrees/Minutes/Seconds and feed it a radius distance in miles
(or kilometers?) and it will come back with a list of every TV station
(analog an digital), repeater, and station under construction, with a
distance and degree heading.

Sorry you missed the point....

It's not about the lawsuit per se. The employees were going to get *nothing* for a pension; i.e K-Mart was already *defaulting* on their pension obligation. The lawsuit just happened to get the employees 162 bucks each - one time- instead of nothing. Their *total* pension was zero and is now at 162 bucks. Big deal.

The irony and the point of the question was, how can K-Mart default on their pension obligation by poor mouthing that they didn't have the money to meet their obligation, and yet they had enough money (millions, billions?) to buy Sears. Maybe that's how they *could* afford to buy Sears---by chumping their employees out of their pension...???

These threat of terrorism has always been there. It's not like 9/11 is anything new other than the B team was in charge, allowing for greater damage. [Remember, no fighter jets broke mach during 9/11. The commander in chief sat on his ass reading a kiddie book as the towers burnt. Throw in the crappy radios used by the FDNY.] I'll rest easier once the present garbage in the White House is gone. I just hope they leave in 2008.

The screening improvements are probably not a bad idea, but had the crew of the plane been informed that 9/11 hijackings were not going to be "traditional" (Condi Rice term), they would have never opened the cockpit doors. Remember, the only waring to other planes in the air during the event was one ACARS message "beware cockpit intrusion."

I choose not to live in fear. It is that simple.

The lameness of the plans the Bushies foil is just beyond belief. If you are going to lie, work hard and make a believable lie. Why not something like blowing up a fuel truck in a tunnel. Sure most tunnels ban hazardous materials, so you get a truck designed to carry something not hazardous, say milk, then you fill it with gas from a truck you hijack.

Trolling!

How stupid can the dumbass 'tard boy be when he comes looking for financial information/explanations in a darn shortwave group.

Then, he doesn't get the answer he thinks he's gonna get or deserves then he gets a bit irate.

Bottom line: Stupid Liberal 'Tard Boy who somehow thinks he's 'educating' folks by posting his bullshit, just like his 'tard boy pal, Rickets.

Personally, I think they're both in the early stages of dementia.

If you use any tape, (especially outside) all tape isn't the same.Most of us have seen plastic tape unravel before.Electricians supply stores sell a good heavy duty old fasioned kind of tape for wrapping electrical connections and that kind of tape will last many,many years outside and inside without unravelling and will remain waterproof too.There is a type of paint on "tape" product available,but I dont remember the brand name of it.You might want to check with some recreational vehicles (motorhomes,camping trailers,etc) dealers and see what kind of tv antennas they sell and also talk to some folks who live in trailer parks and camping grounds areas about tv antennas.The folks in this news group offered some very good information too.

It appears you have the Radio Shack model VU-120 antenna. The best information I can get on this antenna is: gain is only fair to good and directivity is probably below average to average. This antenna is made mainly for local/suburb reception, NOT for distant stations. The beamwidth on this antenna is NOT narrow enough - that is why you can pick up San Francisco stations without turning the antenna. NOT A GOOD ANTENNA FOR WHAT YOU WANT TO RECEIVE. Stick with Channel Master, Winegard, or Jerrold brand antennas. They are built to last and have much higher gain and much better directivity. In YOUR case, I would add the Channel Master 8-bay bowtie antenna for distant UHF signals and keep your other antenna for the locals. Otherwise, you are talking about a $200 UHF/VHF antenna. The 8-bay antenna is not high priced, and beats the UHF section of EVERY UHF/VHF antenna on the market that I know of. But it is extremely directional and you will need a rotor. Also, not only is the gain high and the directivity outstanding, but the design of an 8-bay bowtie gives more "signal capture area" because of the large screen behind the active elements. This really helps in mountainess areas and other weak signal areas. The design of the antenna also narrows both vertical and horizontal beamwidth, resulting in less ghosting. If you can barely pick up a UHF signal with your current antenna, chances are the signal will be very good with the 8-bay bowtie. And I'm talking about your current antenna with NEW coax cable, not your current mixed lead.

Now if you really want to twist some wire,get somebody to hold on to one end with a big Visegrip pliers and get an electric drill and clamp the other end of the wire in the drill chuck and mash that trigger and turn that drill motor on.I have here a Terk TV 50 antenna which I bought for five dollars at the Goodwill store about a year ago.It is about seven feet long and I think it is an amplified tv anteanna meant for motorhomes,campers,etc.Since I subscribe to DirecTV,I dont really need the Terk TV 50 for tv reception.I figure someday I will try it out on one of my other tv sets to see if it works.I have been wondering if it would work ok for a Shortwave Radio antenna,I guess someday I might try it out on one of my old beat up Goodwill Shortwave Radios and see what kind of noise it makes.

More info on your antenna compared to the 8-bay bowtie on UHF signals. The following are approximate figures based on all the information I can find. Your antenna gives an average gain of about 6 db while the 8-bay bowtie gives an average gain of 13.0 db. Depending on the channel, the MINIMUM gain on your antenna is about 0 db while the MINIMUM on the 8-bay bowtie is 9.5. I don't have specifics as to the channels on your antenna. Every 3 db DOUBLES the signal. The average horizontal beamwith of your antenna on UHF is about 31 degrees while the 8-bay bowtie is about 21 degrees. BIG differences. The 8-bay bowtie rejects signals coming from the sides and back several times as much as your current antenna.

I have my doubts that they will. They seem to think that God ordained
them to lead Christianity in a new crusade against the evil infidel
Muslims. If you actually read history, you'll see that all of the
crusades were abject failures, except the first when the Muslims were
caught off guard. You're talking about a president who believes that God
speaks directly to him, and that God is guiding his every move. He also
has his finger on the button. With Iran threatening to nuke Israel, and
China threatening to nuke us, all it would take is one moment of
misplaced inspiration by people who are incapable of thinking rationally
(on all sides) to bomb the world back to the Stone Age.

I will say this: after Bush decides he's president for life and that the
Constitution no longer applies, you'll see a dramatic increase in the
number of shortwave broadcasts to America.

Actually, there was a movie a few years ago about terrorists blowing up
a NYC tunnel. It had Stallone in it I think. Yeah, the Bushies seem to
only be able to foil the lamest plans. Of course, the pundits use the

occasion to show how cunning and intelligent the terrorists are. The shoe bomb was supposedly proof of this. Of course, the terrorists hadn't thought of how noticeable it would be for their jihadi to light his shoes with a match on a plane three months after 9-11. Whatever happened to a detonator? Too much work? I wonder if 9-11 was more luck on Osama's part than anything else, supposing of course that the plots the Bushies have supposedly foiled were in fact real. The last few "big attacks" have been relative pipsqueaks, a bunch of guys with backpack bombs in a crowded location (commuter train, nightclub, hotel). I'm more worried about Kim Jong Il nuking Seoul, or Ahmedinajad nuking Tel Aviv, or same deciding to release weaponized smallpox. Any firing of a nuke by either NK or Iran could result in a cascade of launches that ends up in an all out exchange between the US and Russia/China. A release of smallpox could kill 90% of the world's population in 12 months.

Heard at 22:00 UTC on
3523 CW (quite clear)
7023 CW (weak)
10103 CW (clear)

I tried also some of the SSB freq, and I hear things that can be human voices,
but ... well... not sure ;-)

I will try the upper frequencies...

Or what, you'll throw a hissy fit, 'tard boy?

Tell ya what ya gotta do. Call 911, tell them you're gonna hold yourself hostage until the U.S. stops spewing greenhouse gases. Issue an ultimatum. Be firm. Tell 'em you're gonna execute your hostage unless the U.S. complies within 24 hours.

That should do the trick...

LQ, LYNDY NDB, Boston, MA

Runs 100 watts on 382 kHz

There is also an LQ in Springfield, IL on 375 kHz

They are non-directional beacons for aviation use.

There is an "LQ" lowfer beacon listed out of Springfield, Illinois on 375
KHz.

Here's a page with a bunch of LF beacons heard out of Wisconsin; maybe you
can identify more of the ones you're hearing after checking this list:
http://www.angelfire.com/wi/dxing/lwwisc.html

Have fun,

Jackie

>
>
>
> Do you have a link to the entire story.....

Sorry...the "link" was the local 6 o'clock TV news. Kmart is
headquartered in SE Michigan (Troy) and this has been an on-going story
that locals have been following for awhile. Essentially though, you have
all the salient points. Kmart goes bust...stock goes to virtually

zero...ergo, employees lose pension because pension fund is in (the now worthless) Kmart stock...then the next thing you hear is that Kmart bought Sears (for millions, billions?) Lawsuit was somewhat peripheral--class action lawsuit against Kmart by employees, court rules in favor of employees who get to divvy up $11.75 M. This brings employees up from *nothing* to about $162 each, one time total. Which still doesn't explain where they found the $$$ to buy Sears.

Back in those days there were a lot of fly-by-night TV repair shops. Most breakdowns didn't require a great deal of skill to fix, and the industry was much less regulated than it is today. Someone could read a few books, buy some tools and tubes, and set up a business.

[major snippage]

>Which still doesn't explain where they found the $$$ to buy Sears.

K-Mart closed a whole bunch of stores all over the country. That was the main source of their $ to buy Sears. In Chapter 11 bankruptcies, corporations are allowed to do this with court permission. It's called liquidation. Technically speaking, Chapter 11 of the United States Bankruptcy Code covers "business reorganizations," but most reorganizations will call for some liquidation along with debt restructuring.

I must admit that K-Mart's a rather unusual example, in that most (>70%, roughly) of corporations who go into Chapter 11 end up selling off ALL their assets to someone else. Rarely are they able to buy the assets of other companies; this leads me to believe that K-Mart had (has) an extremely good financial advisor working for them.

While I am not privy to the details of the K-Mart bankruptcy, I'll bet the court allowed them to pay for some pretty good financial advisors. A few Chapter 11 debtors are able to pull off a turnaround and save their companies, but it's relatively few in my experience.

You heard the tx to Central America at 1000 UTC, apparently (I looked it up in Passport). Why the North Koreans are broadcasting English to Central America in the middle of the night is anyone's guess. :) 1000 UTC is a great time to pick up Asian stations on the west coast. I'm surprised it was so weak. I believe that NK has a tx to NAm at 1500 UTC. Apparently all the happy workers are up bright and early in the worker's paradise for the greater glory of Kim Jong Il. hehe ;) I suppose that NK is raring to test that song out by blowing away the South, then taking over and "unifying" what's left.

Berkeley is right across the bay from SF, and in the direction of the prevailing winds, so any nuking of SF will result in burning tar falling on Berkeley within a few minutes. That would be ingenious-Bush nukes SF or LA, blames it on North Korea, and then US troops cross the 38th parallel. China feels free to invade Taiwan, the Arabs invade Israel, and the nukes start flying. In the end, only the cockroaches survive-and the Bushies, safely ensconced in a bunker in the Appalachias with a five year food supply. When they come out in 2011 they drop dead from the radiation, and the earth will have been cleansed of humanity. Of course, they could do a biological Northwoods-unleash the "bird flu" then declare martial law. Of course, that's riskier-flu tends to mutate easily, and the Bushies could end up having to wear protective suits whenever they go out of their bunker like in the movie 12 Monkeys. Either way, they'll get theirs.

>pre-amp can do more harm than good.

All I have is a RS amplified antenna in the attic -- the amplifer is in the antenna -- and I love it because I'm in Baltimore and I can get all the DC stations**. Rarely but sometimes, the signal is too strong with Baltimore stations, so I have an A-B swtich that disconnects the entire antenna if I want. Then I just use the one foot piece of co-ax from the VCR to the A-B swtich, and even that little signal is more than enough when I'm tuned to any station that overloads when using the amplified antenna.

I suppose I could have gotten a variable reducer, or an amp with variable amplification, and sought the best compromise value, but this was simpler, and lets me use maximum for the DC stations. For example, for a few months channel 9 was weak. Then it got to be fine and about the same time channel 7 got weak. Now they're both fine, but I want to keep amplification at its max for the hardware I bought.

**BTW, this is better than cable because cable doesn't have DC stations. Often there is a sports game or even a non-sports show on tv in Baltimore while DC is carrying the regular weekly show.

Also, once when I was watching Law and Order on two tv's at the same time (fiddling with one of them) I saw that the last minute of the show, the part after the last commercial, was shown on the DC channel, but on the Baltimore channel, they put in another commercial. Very distressing. The earlier part of the show they had been totally synchronized. Channel 11 in Baltimore basically cheated everyone out of that last minute or 30 seconds, which resolved some of the plot issues. Now I watch channel 4 in DC more often.

Not sure what you have but it may be called jamais vu, never seen.
The feeling that you've never seen something when in fact you have
seen it. You may even know logically that you've seen it, but you
feel like you haven't.

Sort of the opposite of deja vu, the feeling that something was
already seen.

This is boring. Skip to the last paragraph at the end.

It's possible, remotely possible, that he brought the splitter, tried
it and decided he was getting better reception, all in all, without
it. I think the antenna lead only went to one room, the den?, and my
mother wanted a tv in the bedroom too. (Although I don't remember us
having two sets. !!! or what the second set would have looked like.
After the Dumont broke, we got a Zenith with remote control. But that
was in the den. Plainly I do remember the three runs of flatlead
twisted together,(one from the antenna and two from the sets) so we
must have had two sets.)

Or maybe the previous owner had an antenna wire in the living room and
that's why there was a splitter in the attic, but I don't remember
seeing such a wire.

>Back in those days there were a lot of fly-by-night TV repair shops.

Key difference: North America is not the TARGET AREA of Oz/NZ
broadcasts. They target Asia and the South Pacific. The nature of SW is
such that they can be heard in NAm, but the target area is far south of
LA. The broadcasts by NK that are targeted to North and Central America
air in the very early morning in the target area. To my knowledge, they
do not broadcast to NAm during our prime time, about 5-11 pm local time.
Most stations that broadcast to NAm have a prime time slot, but not the
North Koreans. NK broadcasts to NAm in the early morning-6am on the west
coast, 9am on the east coast (if the signals reach that far). Most SW
listeners in NAm don't sit down and listen in the morning, which is why
it's not prime time. I suppose that in Kim Jong Il's hermit kingdom that
all workers are properly indoctrinated in the morning before work, which
is why they target us at such an odd time.

Jackie,

Thanks for the thoughtful response.

Call me naive, but even though they got money from selling (or closing)
"a whole bunch of stores", wouldn't they have to use that money to pay
off other obligations *first* (like creditors and their pension
obligations) before they go off on a buying spree? I understood that to
be the point of a liquidation--to satisfy *existing* financial obligations.

Well, yeah, if the court allows you to leave the the existing creditors
and pensioners abandoned and twisting in the breeze, it very well could
be easier to effect a "turnaround and save their company".

In a few states, the legal age for sex IS 16 or 17. In one or two it is 15. I remember a teacher sex case in one state where she had sex with 17 year old boys and it was legal, but once they found out she had sex with a 16 year old they nabbed her and charged her with statutory rape. The legal age in California (where David lives) is 18. One of the guys in computer lab had a website pulled up on his screen that showed the legal age for sex in every single country in the world as well as every US state. I wish I could remember the url. The legal age in Japan is supposedly 12. in some countries it is 14. Of course, since David is likely older than 55 him having sex with a 16 year old boy/girl would be gross. But we can tell that he is a drug addict and pedophile. He admits to doing hallucinogenic drugs, and he admits to doing heroin, and he admits to having the hots for teenagers. I wonder what his students at college are learning from him. If you smoke dope with and fuck the teacher you'll get an easy A. And these are the types of people who are teaching the next generation. I wonder how the bosses of the future will handle employee relations-if you smoke my dope and have sex with me you get promoted, if you don't you're fired? I suppose that a future Supreme Court, having been educated by the likes of David, will make such discrimination legal, and bosses everywhere will go back to demanding sex as a condition of employment.

The vertical and horizontal EM wave propagation concept (ground wave)
is that the horizontal wave energy will dissipate more rapidly by
exciting the ions in the earth through the whole cycle. The vertical
polarized wave does not generate as large a response in the earth it
travels over so propagates farther that the horizontal wave. Both
polarization's do propagate over the earth. It's just that the vertical
will go farther. However this is not the subject of local noise sources
in general as they are inductive fields not far fields for the most
part.

Relieved of the far field problems reduces the local voltage noise
field to the polarization of the conductor creating it and dielectric
properties of the matter around it.

Air has a dielectric constant of 1 and wood, paint, brick and the like are much greater than air. The lower the dielectric constant of the material and the farther the field lines are from the ground the more the electric field lines will "spread out." This has the practical effect of causing the near field inductive electric field lines to spread out further vertically where there is "more air" and they are farther from the earth. This is a generalization and will not apply to everyones situation of course.

Rain drops and snow flakes both can carry static charge.

Pure water is a good insulator. If you have a pure bucket of water you could immerse your radio in it and with the exception of the speaker it would operate the same as on your desk.

The practical situation is that water has impurities in it that result in mobile ions that conduct electrical current so impure water will short out the circuitry in the radio.

In rain drops or snow flakes these impurities can cary the static charge. When raining everything gets wet and static charge has the opportunity to short the static charge on the wire across the surface of insulators.

The snow passing near and contacting the wire imparts the charge to it
but is not able to easily create a complete conductive path over the
entire surface of an insulator holding the wire in the air as rain
depending on weather conditions.

< Snip >

Fixed the messed up paragraph.

When raining everything gets wet and the static charge on the wire has
the opportunity to short across the entirely wet surface of insulators
the holding up the wire.

> The snow passing near and contacting the wire imparts the charge to it
> but is not able to easily create a complete conductive path over the
> entire surface of an insulator holding the wire in the air as rain

I assume you mean Clinton is the C team. Clearly, without doubt, you did not read the 9/11 Commission Report, as you speak in complete ignorance.

Clinton acted on actionable intelligence. The cruise missile launch required an overflight of Pakistan. Pakistan and India are not on the best of terms, so a cruise missile coming from the direction of India to Pakistan might cause a nuclear incident. Thus Pakistan was notified of the overflight. The ISS is full of Taliban sympathisers, since the Taliban was a product of Pakistan. It is believed the ISS leaked the information of the cruise missile attack, which is how UBL got away.

Now don't you feel like a dumb ass that listens to say, Sean Hannity, who is the worse of the worse when it comes to outright lies over the radio.

Back in December, I ordered a Philips D2999 service manual. Two weeks ago, I had my credit card company credit me fot the price of the manual. Well, they came through with it tonight. It looks like they had some trouble getting ahold of it. Problem is, I can't read Dutch, although the schematic is easy to follow.

Radios4you has some of these up on eBay. Normally, I don't buy from eBay, but this was a good deal. He has them advertised as the boards for the HF-250 but when I e-mailed Lowe UK, Tony told me that there was only one board made, the W225 preamp board. I think what fooled Frank and myself at first was that the component layout is slightly different from the older iteration.
I compared this board to the schematic in my HF-225 service manual, and with the exception of the additional 22uF cap they are electrically the same.
I installed it my my HF-225 last night and it works like a champ.

It's been about twenty years since Radio Australia stopped registering frequencies and time periods for North America with the ITU. They decided to concentrate their resources on listeners in the Pacific and Asia where Australia has more influence. I remember when their registration of 9580-Khz for the time period 1100-1300 UTC for North America expired. The next day the VOA started using that frequency in the same time period, which made it impossible to hear RA. The VOA wasn't violating any regulations because the frequency was no longer registered by RA for North America. They changed it to the South Pacific. I talked to someone in the frequency department at the VOA that first morning when the problem started. They weren't aware that RA was still using 9580-Khz because it was no longer shown in the ITU schedule for NA. As it turned out, the VOA moved to 9590 the day after I talked to them, apparently as a gesture of good will to RA. According to ITU regulations at the time, the VOA didn't have to do it.

With all the discussion on the group about active antennas, this would be a
good opportunity for the homebrewers out there to build up an active antenna
with these Hi Z in preamps as a basis.

Yeah, right.Open msconfig and see what loads when your computer starts.Even
if you disable (almost) everything that runs on startup, there are still
*dozens* of services, most of them all but useless.And try to run a modern
game,like doom 3 or half life 2!(I use still autocad r14, though, for the
couple of drawings I use every year).

How about this?
Use a laptop as long as a its battery lasts.Then use ordinary pad with a pen.I don't think it's possible to have dc voltage on seats, dc supply are not standardised unlike ac plugs and supplies.It would be easier to have a 120 volt plug directly from the plane's electric system, but maybe only for expensive business class seats?It could be also dangerous or lethal if one passenger spilt his soda right on the plug.

Really nice.But I'd like to see a photo of that empower thingy.Has anyone
from USA boarded the german ICE (InterCityExpress) train?It has a headphone
outlet on every seat, including all economy seats, and on some seats even
small lcd panels!You can choose music, usually what krauts love, also
classical, to listen to your headphones, and there are small panels on the
corridors showing the train's speed!

The active device is not a preamp. It is an impedance converter.

> obligations) before they go off on a buying spree?

There's a pecking order for who gets what in a reorganizational-type bankruptcy. There are various classes of creditors. Usually, tax entities get paid first, assuming there are any outstanding tax obligations. Secured creditors are next. Then, unsecured creditors are left at the bottom, and if they get anything at all, it's usually pennies on the dollars they're owed.

As I said, I'm not privy to the details of this bankruptcy, but a quick check of the petition and schedules they filed, along with the docket report of what was subsquently filed in the case, would tell the story.

Nice work in the Kommode, John. If you can get it.

Atlanta, GA: Epoch Times Chief Technical Officer Beaten By Communist In His Own Home

Around noon on Feb. 8 two armed men forced themselves into the Atlanta home of Epoch Times lead information technology specialist Mr. Yuan P. Li, beating him and stealing two of his laptops. After Mr. Li managed to free himself from the extension cord used to bind him, he was taken to an area hospital for treatment. This crime, occurring in a very safe area in Atlanta and done without concern for the taking of valuables, appears to break new ground in the Chinese Communist regime's campaign against The Epoch Times.

Chinese Newspaper Editor Beaten to Death in Police Custody

Wu Xianghu, Deputy Editor-in-Chief of the Taizhou Evening News, recently suffered serious injuries while in police custody. Mr. Wu had been arrested for publishing an investigative article on arbitrary ticketing practices by the police. Thursday morning, February 2, Mr. Wu failed to respond to medical treatment and died of his injuries. He was 42 years old.

Human Rights Attorney Gao Zhisheng Asked to Leave China by Secret Police

Sound of Hope reporters Qin Yue and Li Min reported that famous human rights attorney Gao Zhisheng ended his two-day-long hunger strike. Right after he stopped fasting, he received a cell phone message from the secret police, trying to persuade him to leave China. When Gao ended his two-day fast for human rights, his relatives and friends from his hometown were all very worried about his safety. They urged him not to continue to confront the CCP.

This time of day/year, India on 10330 usually comes in nice and strong.
But, for right now at 16:20 UTC, it is so strong and clear, it almost sounds
as good as the Sackville relay does here in NJ. I'm picking it up here with
NO fade at all at S-15+. Amazingly strong and clear.

I suspect you're partially right. On maps that show world electricity use, NK is completely dark. I suspect that power is turned on for only a few hours in the evening. The bc times mentioned are all in the evening-up to about 1am-NK time. When the power is off to the proles, the power is likely off to the government too. So NK can only broadcast on shortwave when the power is on, which is in the evening local time. A side note: when electricity was first introduced to America, it only was generated in the evening, as it was concieved as a way to light houses and nothing more. It took some convincing to turn the juice on 24/7. I suspect that electricity is in very short supply in NK, so they're doing the natural thing-just using it for lighting when people need it most.

Certainly not!

In the Workers' Paradise of Korea, the Party is in firm control.
Electricity (from the millions of victorious, small power plants) is
given to what the Army-based philosophy of the Dear Leader determines
is most important. The masses gratefully accept whatever is left over.
And no one ever complains.

WRONG!

It's kind of a cost-reduced R71, not as many features, but overall a
pretty nice set. It was panned by the critics because it was not a
bigger-better set than the R71 it replaced, but I had one and liked it.
Performance on par with an R75.

Did Mr. "pretty sucky" actually own one?

If the employees 401K (not a pension fund) was invested entirely in
Kmart stock, then yes I do feel sorry for the employees. But they were
all adults, and if they were dumb enough to place their entire
retirement nest egg in one stock, then I can only say they probably
learned a valuable if expensive lesson about diversification. They also
learned that shareholders come last in reorganizations. Missing from
the articles I read was information about the 401K plan - did employees
have a cafeteria of investments as is usually the case? Also, KMart
has been suffering, indeed bleeding for a couple of decades now - their
problems centered around a complete inability to respond to more agile
competition. So the failure of KMart should not be a surprise to
anyone, and those who were career employees should have taken note and
adjusted their careers or at least diversified their investments.

Remember that many Kmart employees are short termers, either part time
or have been there for less than 10 years, so the settlement reflects
that demographic. Also, the $160 figure quoted is an average which
tends to be much more attention gathering than useful statistics about
the workforce.

Lawsuit was somewhat
> peripheral--class action lawsuit against Kmart by employees, court rules
> in favor of employees who get to divvy up $11.75 M. This brings
> employees up from *nothing* to about $162 each, one time total. Which
> still doesn't explain where they found the $$$ to buy Sears.

The surviving entity is Sears Holdings.

Possibly true, but also possibly a bit naive on your part (maybe).
Please realize that they may not be "stupid"--many companies have
dictated where the employees *must* put their money. Don't quote me
but I believe Enron and Lucent were two that did that, certainly several
others that I can't recall at the moment.

> They also learned that shareholders come last in reorganizations.

Absolutely true, but I would think that even "last" in the pecking order
would still come before they can spend millions/billions on an
external deal that's not even queued up in the pecking order.

> Missing from the articles I read was information about the 401K plan
> - did employees have a cafeteria of investments as is usually the

Absolutely true.

> So the failure of KMart should not be a surprise to anyone,

It wasn't (or certainly shouldn't have been).

> and those who were career employees should have taken note and
> adjusted their careers or at least diversified their investments.

Again, *if* they had the choice to diversify their investments. Plus,
career-wise, once people have 10-15-20 years invested in a company,
human nature being what it is, even though things might be starting to
look a little rough at Kmart, how many of those 20 year full-time people
are going to say, "Oh, gee, I think I'll throw out my 20 years at this
company and start all over again at the bottom of the ladder somewhere
else". Not many, I'll wager.

Again my original point was, even though there is a pecking order,
current creditors and pension obligations seem like they should have
been paid off first *before* they bought an outside, non-related
company. Had they not spent the millions/billions for Sears, they would
have had enough to meet their current *obligations*.

I thought that was clear from my post when I said Hi Z in.
And that is EXACTLY what is required in an "active antenna"
Although I do not own that particular Lowe board, my Lowe HF-150 "whip preamp" has gain in addition to Z conversion, so I fail to see where the term preamp does not apply.

It seems to me that to keep the input referred noise as small as
possible, you would want gain.

How is that a naive statement. We all have choices for investing our money. If the employer offers only a company stock invested plan then financially astute employees would be wise to diversify outside the 401k environment. That isn't sophisticated just wise and forward thinking investing. We all saw what happened to lots of Enron employees who centralized their investment portfolio. They were blinded by the greed and arrogance that seemed to dominate that company and found themselves hurt financially by that decision to put most of their eggs in one basket.

> Please realize that they may not be "stupid"--many companies have
> *dictated* where the employees *must* put their money.

No matter what the 401K investment plan, you don't have to put all of your money into it. The best choice for people in that situation would be to contribute only to maximize the employers contribution and invest the remainder separately elsewhere. You can invest outside the company,and many people wisely choose to do so.

No, that is not how bankruptcies and reorganizations work. The potential for return is greater with stock than with senior debt, but along with that gain comes an equal risk.

>

We ALL have the opportunity to invest elsewhere. We don't have to put
all of our money into an employeer offered 401K. Just take your money
and buy stock 2x a month, put it into a basket of mutual funds, buy
real estate, buy E bonds, just do something.

>
> Again my original point was, even though there is a pecking order,

There was no pension obligation with this or any 401K, period. This
was a so-called defined contribution program as compared to the
disappearing pension or defined benefit program. Employees took their
(and presumably some of KMart's money and invested it in KMart stock.
There was no promise of a pension or annuity.

> Had they not spent the millions/billions for Sears, they would
> have had enough to meet their current *obligations*.

They (KMart) ceased to exist, because a substantial portion of their
assets (stores and inventory) were liquidated before the remainder was
combined with another once stellar retailer Sears.

Yes, that is true, and additionally stock holders come after common
stock holders. The employees who put their retirement money into a
KMart stock invested 401K plan were nothing more than owners of common
stock that was held in a 401K plan.

Thanks for the expanded explanation, Telamon!

So basically, then, one is fine doing shortwave listening during a snow storm, provided that one is not using an outdoor antenna that is exposed to the falling snow (or alternatively -as per David's post- if one has an outdoor antenna which employs an unbalanced transformer and the low side is grounded).

All antennas should have a path to DC ground. This is my religion,
being a former broadcast engineer on the Gulf Coast. Lots of ground,
lots of MOVs, equals less sleep interrupted by thunderstorms.

No need to be defensive. We're all friends here. We're both correct.
I was hoping to get the less experienced among us to understand a
little better.

A short (i.e. < 1/4 wavelength) antenna is always high impedance.

Source record: 62091

"Do We Have (other) Examples of (conservative) Lies and Left-Wing Distortions Being Presented as 'the truth' by the (conservatives)?"

Why yes, quite a few. I notice you are silent on these RHF:

1. Ex-CIA officer accuses White House of 'misusing' data on Iraq;
Bush administration 'cherry-picked' data before war, ignored warnings about postwar strife.
By Tom Regan | csmonitor.com

A recently retired CIA agent, who until last year was responsible for the collection and assessment of intelligence on the Middle East ï¿½ including Iraq, wrote in the leading foreign policy magazine, Foreign Affairs, that the White House misused intelligence on Iraq to justify a decision to go to war. Paul Pillar, former national intelligence officer for the Near East and South Asia, wrote that the Bush administration did not use intelligence to inform their decision about going to war in Iraq, but instead "cherry-picked" data that justified a decision that it had already reached.
(snip)

http://www.csmonitor.com/2006/0210/dailyUpdate.html

2. Libby testifies that bosses OK'd CIA leak, papers say:

WASHINGTON ï¿½ Vice President Dick Cheney's former chief of staff testified that his bosses instructed him to leak information to reporters from a high-level intelligence report that suggested Iraq was trying to obtain weapons of mass destruction, according to court records in the CIA leak case.
Cheney was one of the "superiors" I. Lewis "Scooter" Libby said had authorized him to make the disclosures, according to sources familiar with the investigation into Libby's discussions with reporters about CIA operative Valerie Plame. (snip)

http://seattletimes.nwsource.com/html/nationworld/2002795924_leak10.html

3. White House takes flak over Katrina, CIA leak case:

ALAN FREEMAN AND PAUL KORING
Globe and Mail Update

Washington ï¿½ Washington's inadequate response to the catastrophic flooding unleashed by hurricane Katrina came under renewed scrutiny yesterday with the disclosure that top aides to President George W. Bush were told the levees had been breached the day the storm hit.
(snip)

Michael Brown, who was forced out as director of the Federal Emergency Management Agency for the botched response to Katrina, told senators yesterday that he had spoken to a top White House official at Mr. Bush's ranch in Crawford, Tex., at least twice on Monday, Aug. 29, and told him that New Orleans was filling up with water.

The Bush administration maintains it only learned of the unfolding disaster in the city the next day. In fact, Mr. Bush later said he felt relieved on Tuesday morning that New Orleans had ï¿½dodged the bullet.ï¿½

Hi Knut,

Those are the folks I ordered it from. Quality of the copies varies. A
couple of the manuals were pretty clear while one of the others was low in
contrast. I ordered a service manual for the Sony 6500W and the manual
didn't have any alignment notes, so it was fairly useless. Probably, they
didn't have a copy of the supplement for the manual.
The Grundig 210 service manual is in pretty good condition.
Let me know if you need any of these manuals.

Pete

Actually it feels pretty good. 'Cause we know full well who REALLY sucks, and that would be the totally lost and befuddled Liberal/Democrats. Who, by the way, are acting more and more like the traitors to America that they are with each and every passing day.

Keep trying, boy, and I'll just keep on LMFAO at you.

I've had 3 R-72s and really liked them (wish I had kept one!) Not as feature "packed" as the older R-71A or R-75 but definitely an order of magnitude better than a DX-394. I would have to rate them pretty close to the Yaesu FRG-100. A very "solid" receiver in my experience. Were poorly rated due to the excessive price when they were new.

Pete,

I linked them from my homepage, since it looked like a handy way to pick up
our copies.

Did they offer you any compensation for the incomplete documents?

If suppliers skimp on quality and/or deliver incomplete files it is a matter
that people should know about....

Anyone else have any experiences or inputs?

Note specifically I said input referred noise.

If you don't put gain in the preamplifier (i.e. you do the so-called impedance only function), then the AGC of the radio will amplify the noise of the preamp. Since there is no gain in the preamp, you have the combination of the noise from the preamp and the amplifier (i.e. AGC) of the radio. If the preamp has some gain, then the AGC will do less amplification, thus the noise will be dominated by the preamp.

I'm a ham... wow... sounds like a cool kit! I already have several kits
around here I haven't built, though, but I'll bet someone on this group
would want it. Just out of curiosity, how much would you charge for that
kit?

Carter [k8VT] - Lets See . . .

The Pension Fund was Bankrupt and had NO Market Value.

The Sears Acquisition {Deal} was a Tangible Asset that had a
Market Value and therefore could be Leveraged and Financed
as a Business Asset via a Loan, Corporate Bonds or Stock Offer.
http://www.google.com/search?hl=en&lr=&q=kmart+sears+acquisition&btnG=Search

The very real fact that the Employees and former employees
of K-Mart received no real Pension is a matter of Public Policy
and "The Laws" that were (currently are) instituted by Congress.
Note - Don't Blame the Presidents : Bush, Clinton, Et Al
The Structure of our Federal Public Laws favor the Debtors,
Share Holders and then the Employees in-that-Order.
FWIW - Thirty Plus (30+) Years of Democrat Control of
Congress an they did nothing, Nothing. NOTHING !
to Put-the-Workers First and all others a far second.
IMHO - I would expect this of the Republicans who favor Big
Business, but the Democrats claim to be for the Working People
{The Little People} and they never delivered on protecting
the 1ST RIGHTS of the Workers to Their Pensions above all
other Business Claims.

need i say (write) more ~ RHF

>>> I've seen II's go for $150 on eBay before.<<<

I think the one and two are about the same except the two has a tweeter. My one, a 72880a doesn't even have an external antenna connection (the 72880b has an ext ant) but then it doesn't need it as it is hot all across the dial as it is, reminds me of the car radios of the 50's and 60's. I had one of the first 3's and it didn't even compare, sold it in a garage sale. RM~

Source record: 62227

I found this thread from late 2005 and would like to respond.

Yes, I've had my letters read over the air back in the '70s over my trusty Sony Earth Orbiter.

HCJB - maybe 5 different letters 1975-1981 when they had the programs DX Partyline and Musical Mailbag. DX Partyline is where I first heard of Mr. Stuart MacKenzie!
Radio Nederlands - 1975
Radio Japan - 1976, 1977
Radio Australia - 1975, 1976

Radio Nederlands' and HCJB's english programs were in the evenings on the west coast at that time so it was no sweat listening for them. Radio Japan & Radio Australia, however, broadcast to NA in english in the early-morning hours and I would have to get up in the middle of the night to tune them in, set up the tape recorder and listen. Both stations, however, sent me a QSL or letter in advance to let me know that the letter would be read and what date and time. As a teenage girl DX'er I was somewhat of a novelty so I would frequently get my letters read by that merit alone. Unfortunately, having moved too many times in the last 30 years I have misplaced the cassette tapes I recorded the broadcasts on. It would be a neat piece of nostalgia to still have...

Anyone else have reception report or letters read on the air stories?

Gore was the head of the White House Commission on Aviation Safety and
Security [1] which looked at a bunch of terrorist-realted issues and
made recommendations, including locked pilot doors. Heavy Aviation
lobbying blocked these regulations from being put in force.

After WTC '93 Clinton saw the need to reorganize the FBI, CIA, etc to
handle the type of threat that WTC '93 and OBL were presenting. He
formed the Hart-Rudman commission [2] which presented it's findings
just in tome for the 2000 election. If Gore had won the
recommendations of both these commissions would probably have been
implemented and would ahvea had a fair shot at preventing 9-11-2001.

Bus ignored the hart Rudman recommendations until after 9-11 and even
then the families of the victims of 9-11 had to lobby heavily to get
Bush to reorganize our intelligence services.

Counterterrorism Resources <terror.htm>

White House Commission on Aviation Safety and Security
FINAL REPORT
TO
PRESIDENT CLINTON
VICE PRESIDENT AL GORE, CHAIRMAN
FEBRUARY 12, 1997

February 12, 1997
President William J. Clinton
The White House
Washington, DC

Dear Mr. President,

We are pleased to present you with the report of the White House Commission on Aviation Safety and Security. You established this Commission by issuing Executive Order 13015 on August 22, 1996 with a charter to study matters involving aviation safety and security, including air traffic control and to develop a strategy to improve aviation safety and security, both domestically and internationally.

During the past six months, we have conducted an intensive inquiry into civil aviation safety, security and air traffic control modernization. Commission and staff have gathered information from a broad range of aviation specialists, Federal Agencies, consumer groups, and industry leaders.

After many months of deliberations we have agreed on a set of recommendations which we believe will serve to enhance and ensure the continued safety and security of our air transportation system.

We are privileged to submit these recommendations herewith.

Sincerely,
Vice President Al Gore, Chairman

[2] U.S. Commission on National Security/21st Century
aka Hart-Rudman Commission
aka Hart-Rudman Task Force on Homeland Security

I have a Zenith 500 series transistor radio (500E, I think) that says
"unbreakable nylon" on the back. Of course, it has a crack. Hey, isn't
nylon what pantyhose is made out of? I guess if you squash together
10,000 Leggs, you get a transistor radio case.

I didn't ask them for any compensation. It was pretty cheap, at $16.95 USD.
They try......sometimes, I think they just don't have the resources.
The Grundig 3400 manual that I bought from another place that goes through
Clickbank.com was the silliest thing I ever saw. The photos of the board
layouts were in two colors.............light black and dark black. The
trimmer adjustment points were barely perceptable. It looked like a scan of
a a 10th generation copy on one of those old copiers that used liquid toner.

That was the same era in which vinyl LPs were also labeled as "unbreakable".
In comparision with the shellac 78s, the term wasn't such a stretch.
Similarly, other manufacturer's plastic radios at the time were either
balkelite or fragile polystyrene. Tougher hard plastics such as ABS didn't
come around until the 60s.

Zenith made some high quality portables. Here's a link:

It would be best if you just quit shooting at them. Have you ever
noticed that the pile of empty beer cans on your porch is just HUGE
after you wake up after ANOTHER blown up transformer?

I also own a Zenith 500 radio and many other Zenith transistor radios and Zenith tube type radios.I used to tote a little Hitachi transistor radio in my shirt pocket when I was in Vietnam.I bought the radio at the Scott Air Force Base,Illinois Exchange store before I went to ammo school at Fort Knox,Kentucky and then to Vietnam.That Hitachi was a great little radio too.Somebody cut into my duffle bag and stole that little Hitachi radio and my Canon camera that I had bought at the U.S.Commisary store in Cholon (Cholon,the Chinese section of Saigon) and most of my photos I took with that camera in Vienam and some other things of mine including a silk jacket with an embroided sign (I wont tell y'all what the sign said) on the back of it that I had Saigon Tailors make for me.I paid $11.00 for that jacket,I bet it is worth a pretty penny nowdays.

Hi,
Coax impedance is typically ~50 or ~70 Ohm range depending on the type
and it's so called unbalanced feeder vs. twin lead is 300 Ohm balanced.
Balun means Balanced/Unbalanced kinda transformer to keep the impedance
matched for minimum signal loss. Buy good quality coax like Belden brand
and use also good quality weather tight balun. You connect the balun at
the antenna terminal, screw in coax at the other end of balun.
It's done.
Good luck,
Tony

Hi,
Twin lead also has better quality foam ones not the skinny twirly kind.
Coiling up extra coax is not a good idea it can act like RF choke and
could lower signal level.

DaviD - The simple logic of it all is :

We are a Multi-Channel Information Society.
* Dozens of TV Stations plus Cable and Satellite TV
* Hundreds of Radio Stations plus Satellite Radio
* The Internet / WWW

People as Individuals can "Choose" what they want to Hear
and Listen to - By the Minute ! - By the Hour ! - By the Day !

1 - A Good Number of People "Choose" to Listen to Talk Radio.

2 - A Good Number of the People Who "Choose" to Listen
to Talk Radio and "Choose" to Listen to Conservative Talk Radio.

3 - Most People "Choose" to Listen to things that they Like and
are Comfortable with : Music, News, Sports and yes Talk Radio.

4 - Business Advertise with the Radio Programs that they feel
attract the largest number of Listeners who may want, need
and/or use their products and services.

5 - Successful Radio Programs Grow because of two Factors :
Listeners and Sponsors.

6 - Conservative Radio Programs have both a High Percentage
of Radio Listeners and Many Sponsors wanting to Advertise
their Products and Services with them.

7 - People "Choose" Conservative Talk Radio because to some
degree that is how deep inside them - that is how they 'feel'
about many things in their Lives and the way Life Ought To Be.
Feeling Are Facts [.]

DaviD - Why is 'Talk Radio' So Conservative ?
[Because People Tune-In and Listen !]

just my two cents worth ~ RHF

1854. Icom R72 update

Newsgroup: rec.radio.shortwave
Date: 2006-02-12 11:26:29 UTC
From: Rikk <rikks.mail@ntlworld.com>
Message-ID: <FXEHf.61773$0N1.48715@newsfe5-win.ntli.net>
Source record: 62406

Hi all, thanks for your help and advice regarding my questions about the Icom R72.
Anyway, I went ahead and bought it, not tried it out yet , but will give it a test drive today.
I bought it off a local auction in the town where I live, it was a house clearance, and I liked the look of it, It is in near mint condition, no marks on it anywhere. It is in its original box and has the manual and all paperwork.
They started the bidding out at ?25.00p ($45.00-USD)
I put the bid in at ?25.00p but nobody else was bidding, so it went as reserve not met item not sold. I had a word with the seller and she said the reserve was ?85.00p ($148.00-USD
So I bought it at that, ?85.00p
Looking at the radio, I think I have had a good deal at that price, but as I am very new to sw-radio, time shall tell. It certainly looks impressive, all I got to do now is read the manual to see how the hell I work the thing
thanks for comments and advice
best regards
Rikk

That's how I became proficient with a bow&arrow, shooting street lamps out, no not from right in_under them, but from 50yds! Now while taking these shots we realized that if we missed, and we mostly missed, that the arrow was typically "gone forever".

We stopped one day after shotting for awhile and hiking home to find some guy in his yard with our arrow in his hand. He see's us, we see's him, never caught. Man those arrows go a L O N G ways!

Those are not worth anything at all and if so probably $12-15.00. Since
it's probably taking space at your house you can ship it to me and I
will throw it in my junk pile, of course you would have to pay shipping.

Keep it and give it to the first grandkid that shows any interest in
radios. Be sure to let them know how great it is to have such an old
piece of radio history.

Coiling up extra coax wil not make it like a RF choke and will not lower the signal level. As long as the coil diameter is large enough that the center conductor does not cut into the iner insulation and short to the shield, nothing on the outside of the coax will affect the strength of the signal. The signal is carried on the inside of the outer shield. Coil up all the extra you want. One thing that will affect the signal is if you have way too much coiled up (like 20 or more feet) is the extra loss in the length of coax. YOu will get the same ammount of loss if it is coiled or just ran in a line.

If you are transmitting , coiling up the coax may have a benifit as it will act as a choke and keep the transmitted rf that is coupled from the antenna from getting back to the transmitter. Discussion on this is beyond the TV application and not needed here.

past the 750mA level recently to about the same level. "AA" cells are
not in the same class, in size or capacity.

http://www.insightmag.com/Media/MediaManager/Rove2.htm

Issue Date: February 6-12, 2006

Rove counting heads on the Senate Judiciary Committee

The White House has been twisting arms to ensure that no Republican member votes against President Bush in the Senate Judiciary Committee's investigation of the administration's unauthorized wiretapping.

Congressional sources said Deputy Chief of Staff Karl Rove has threatened to blacklist any Republican who votes against the president.

The sources said the blacklist would mean a halt in any White House political or financial support of senators running for re-election in November.

"It's hardball all the way," a senior GOP congressional aide said.

The sources said the administration has been alarmed over the damage that could result from the Senate hearings, which began on Monday, Feb. 6.

They said the defection of even a handful of Republican committee members could result in a determination that the president violated the 1978 Foreign Intelligence Surveillance Act.

Such a determination could lead to impeachment proceedings.

Over the last few weeks, Mr. Rove has been calling in virtually every Republican on the Senate committee as well as the leadership in Congress.

The sources said Mr. Rove's message has been that a vote against Mr. Bush would destroy GOP prospects in congressional elections.

"He's [Rove] lining them up one by one," another congressional source said.

Mr. Rove is leading the White House campaign to help the GOP in November's congressional elections.

The sources said the White House has offered to help loyalists with money and free publicity, such as appearances and photo-ops with the president.

Those deemed disloyal to Mr. Rove would appear on his blacklist.

The sources said dozens of GOP members in the House and Senate are on that list.

So far, only a handful of GOP senators have questioned Mr. Rove's tactics.

Some have raised doubts about Mr. Rove's strategy of painting the Democrats, who have opposed unwarranted surveillance, as being dismissive of the threat posed by al Qaeda terrorists.

"Well, I didn't like what Mr. Rove said, because it frames terrorism and the issue of terrorism and everything that goes with it, whether it's the renewal of the Patriot Act or the NSA wiretapping, in a political context," said Sen. Chuck Hagel, Nebraska Republican.

Turd Blossom is a treasure among men (ask Jeff Gannon).

Another Bush-Crime-Family buddy, given top by Bush Appointment, with FAKE RESUME gets outed... This time at NASA (he resigned when the truth came out)
Mr. Deutsch, 24, was offered a job as a writer and editor in NASA's public affairs office in Washington last year after working on President Bush's re-election campaign and inaugural committee, according to his rï¿½sumï¿½. No one has disputed those parts of the document.

According to his rï¿½sumï¿½, Mr. Deutsch received a "Bachelor of Arts in journalism, Class of 2003."

Yesterday, officials at Texas A&M said that was not the case.

"George Carlton Deutsch III did attend Texas A&M University but has not completed the requirements for a degree," said an e-mail message from Rita Presley, assistant to the registrar at the university, responding to a query from The Times.

Repeated calls and e-mail messages to Mr. Deutsch on Tuesday were not answered.

Mr. Deutsch's educational record was first challenged on Monday by Nick Anthis, who graduated from Texas A&M last year with a biochemistry degree and has been writing a Web log on science policy, scientificactivist.blogspot.com.

>From The New York Times, 2/8/06:
http://www.nytimes.com/2006/02/08/politics/08nasa.html

By ANDREW C. REVKIN

George C. Deutsch, the young presidential appointee at NASA who told public affairs workers to limit reporters' access to a top climate scientist and told a Web designer to add the word "theory" at every mention of the Big Bang, resigned yesterday, agency officials said.

NASA Chief Backs Agency Openness (Feb. 4, 2006) Mr. Deutsch's resignation came on the same day that officials at Texas A&M University confirmed that he did not graduate from there, as his rï¿½sumï¿½ on file at the agency asserted.

Officials at NASA headquarters declined to discuss the reason for the resignation.

"Under NASA policy, it is inappropriate to discuss personnel matters," said Dean Acosta, the deputy assistant administrator for public affairs and Mr. Deutsch's boss.

The resignation came as the National Aeronautics and Space
Administration was preparing to review its policies for communicating
science to the public.

Move over Mike "helluva guy" Brown.

Charleston (W.V.) Gazette
February 07, 2006
Soldier pays for armor
Army demanded $700 from city man who was wounded
By Eric Eyre
Staff writer

The last time 1st Lt. William "Eddie" Rebrook IV saw his body armor, he was lying on a stretcher in Iraq, his arm shattered and covered in blood.

A field medic tied a tourniquet around Rebrook's right arm to stanch the bleeding from shrapnel wounds. Soldiers yanked off his blood-soaked body armor. He never saw it again.

But last week, Rebrook was forced to pay $700 for that body armor, blown up by a roadside bomb more than a year ago.

He was leaving the Army for good because of his injuries. He turned in his gear at his base in Fort Hood, Texas. He was informed there was no record that the body armor had been stripped from him in battle.

He was told to pay nearly $700 or face not being discharged for weeks, perhaps months.

Rebrook, 25, scrounged up the cash from his Army buddies and returned home to Charleston last Friday.

"I last saw the [body armor] when it was pulled off my bleeding body while I was being evacuated in a helicopter," Rebrook said. "They took it off me and burned it."

But no one documented that he lost his Kevlar body armor during battle, he said. No one wrote down that armor had apparently been incinerated as a biohazard.

Rebrook's mother, Beckie Drumheler, said she was saddened - and angry - when she learned that the Army discharged her son with a $700 bill. Soldiers who serve their country, those who put their lives on the line, deserve better, she said.

"It's outrageous, ridiculous and unconscionable," Drumheler said. "I wanted to stand on a street corner and yell through a megaphone about this."...

That is why I am going independant. The reps and dems both suck big ones! They give great lip service to an issue but in the end just do what ever the f*** they want. They represent no one but themselves. The citizens of USA just get the shaft as usual.

Randy

I'm sorry that you feel that way. Fundamentalists obviously display their ignorance of science, but they certainly don't have the power to destroy civilization. The Christian voices in the world are many, but the ones we usually hear about are the off the wall types of which you speak. As far as "Mohammadans" , as you put it, compared to Christian fundamentalists, please get a grip. My eyes/ears/brain see some similarities but certainly not the same. I don't recall fundamentalist Christians blowing themselves and others up in order to further the "truth" and to dispose of the unbelievers. Like you, I have a hard time with Genesis taken literally, but that doesn't mean the Bible is untrue. Every religion, no matter what it may be, attempts to explain the origin of everything. The beginning of Genesis is Moses's attempt at that very concept. Personally, I confess to be a Christian, but I'm not determinined to destroy anything at all. The only things I want to destroy are my personal defects that keep me from sharing God's love with others and depriving myself of the quality of life that God intended for his children. With that, I'll shut up. I hope this makes sense to you, David. Please try to remember that Christians in general are not like the ones we hear the most about. The media loves to focus on the extremist types of people because it makes a better news story. But "they" don't speak for the majority.

Most likely, Halliburton salvaged the body armor, cleaned it up, and sold it back to the Army for around $7K.

BTW, when Lt. Rebroock goes to a VA hospital for rehab, chances are he will wait in line with all the other walking wounded and amputees for medical treatment in an under-funded, substandard facility. Not to worry. The American people, private citizens and corporations, are building a $35 million facility to serve military personnel who have been catastrophically disabled in operations in Iraq and Afghanistan. The Intrepid Fallen Heroes Fund is constructing a world-class state-of-the-art advanced training skills facility at Brooke Army Medical Center in San Antonio, Texas. So far, it is funded completely by private donations. The fund is still about $6 million short. When Halliburton (the corporation that over-billed the U.S. gov. to the tune of millions for its operations in Iraq, and covered up the fact that it supplied polluted drinking water for our troops in Iraq) was asked to contribute, they refused.

For more info on the Intrepid Fallen Heroes Fund:

Not surprising. But I think Bush realized his goals in Iraq - getting
revenge on Saddam for trying to off his pop, and giving Halliburton the keys
to our treasury. So multi-billion-dollar-fraud is just a side show that
just happens to grease more republican cronies. The same thing is going on
in New Orleans, though on a smaller scale.

1906. Grounding A Radio ?

Newsgroup: rec.radio.shortwave
Date: 2006-02-12 17:19:43 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <Pr6dnTJBe4et83LeRVn-tQ@comcast.com>
Source record: 62458

Hello:

Presently using a random length wire running around my attic (for receiving only).

My receiver now has a ground wire running from the chassis to a nearby water pipe, and also has grounding via the center pin on the ac power cord.

Will be installing an outside PAR Inverted-L receive only antenna.

There will be a Balun and an ICE Arrestor near ground level; both of which

will be grounded to a new ground rod I'll bang in, in close proximity.

Then, about a 125 foot coax run back to the house where my receiver is

in an upstairs room.

Am wondering about how all ground your receivers, and what might be the best way for me to. Hope the following is reasonably clear, and not too convoluted, but let me try -

Questions:

Should I disconnect the receiver ground going to the water pipe ?

This would help implement the "single point ground philosophy"

that everyone says is the way to go.

If I do, can I then rely solely on the coax shield being the receivers ground ? This would be from the radio chassis to the ground bar, of course.

Then there's the question of the AC power plug's center pin grounding the chassis.

There goes my single point system, I guess.

Should I perhaps inhibit this pin with one of those cheater-plugs ?

I'm also wondering about any safety implications if I do disconnect the chassis to water pipe

ground wire I previously installed, AND also use a cheater-plug so the chassis isn't directly

connected to the AC ground at the plug. Not sure if just relying on the coax

shield back to the ground bar is safe ? Thoughts ?

Also, my house 220 V input does not seem to have any ground rod

outside, like I believe the new code requires. It does seem to have an interior wire

running to my house's water line. I seem to remember from years back when the service box was opened that this wire was from the neutral bus, but not 100% sure.

I would not really want to change or disrupt this present house grounding scheme by bringing this wire 125 feet or so to the new ground rod I will be installing.

Any thoughts or suggestions on what would be the best grounding configuration for

the radio (from a noise, safety, and possibility of any induced lightning surges) ?

Thanks,

Bob

I heard them the last two nights on 3523kHz CW.

The pile-ups are a disgrace these days. CW ops used to be a disciplined bunch back when. No internet spots and most ops kept off the DX stations frequency. Now, tune ups, jamming and idiots who don't know how to listen - LIDS.

Sad days for Ham radio.

In the 1950s, Walter Cronkite hosted a CBS-TV program that used real network correspondents to report events from days well before radio or TV in the style of "live" television news. Called You Are There,* the program taught history -- and had a secret history of its own. All the writers were victims of the McCarthy-era blacklist. They used the tales of Joan of Arc, Galileo and other historical figures to make thinly disguised points about contemporary witch hunts.

The following is just my opinion and should not be interpreted as
professional advice in any way.
You are responsible for your own actions and safety.

"Robert11" <rgsros@notme.com> wrote

I would remove the wire from your radio to the water pipe IF you follow the
following advice.

>
> Will be installing an outside PAR Inverted-L receive only antenna.
>
> There will be a Balun and an ICE Arrestor near ground level; both of which
>
> will be grounded to a new ground rod I'll bang in, in close proximity.

If you want an ideal ground set 3 ground rods at least 8 feet apart and bond
them together.

>
> Then, about a 125 foot coax run back to the house where my receiver is
>
> in an upstairs room.
>

A lightning protector idealy should be located at the outside entrance to
your home and its associated ground wire directly connected as close to a
ground rod as possible. You want to give any lightning enery the least
resistance to ground as possible. The shorter this distance to ground the
better. Your 125 feet of coax will look like infinite resistance to
lightning energy IF you follow the above recommendations.

>
> Am wondering about how all ground your receivers, and what might be the
best
> way for me to. Hope the following is reasonably clear, and not too
> convoluted, but let me try -

All my radio station grounds (if the radios provide grounding posts on their
cabinets) are individualy bonded to a single copper Station ground panel.
This single copper Station ground panel is then bonded using 2.5 inch copper

strap (ribbon) to another Main copper ground panel located near my electrical service. All my antenna lightning protectors are also mounted on this Main copper ground panel. This Main copper ground panel (and seperately my electrical service) is then bonded directly to 3 interconnected/bonded ground rods using 2.5 inch wide copper strap (ribbon) obtained from Polyphaser.

The AC ground is retained per the power plug on each individual radio. It serves as operator safety and should not be tampered with or defeated in any way.

All in my opinion.

> one has an outdoor antenna which employs an unbalanced transformer and
> the low side is grounded).

You have two options I can think of to mitigate the static problem.

1. A voltage transformer of some type not a current type.
2. Some type of static discharge unit on the coax lead-in to an outdoor ground stake.

#1 You can get more signal out of the wire by using the transformer so this solves two different problems of improving the wire reception performance and blocking static electricity from reaching the radio input at the same time.

Technically the amount of static protection provided by two windings in the transformer is called voltage creep-age. This factor goes up with distance and the insulative value (voltage breakdown) on the wires used to make the transformer.

The wire antenna and outside ground stake are connected to the ends of the primary winding. The coax lead-in shield and center conductors are connected to the ends of the secondary winding. The coupling between the windings is magnetic only and with the wire insulation the static electricity can't cross between them but the signal does magnetically. The static on the wire goes to the ground stake keeping it at a very low value, a value far below the insulative value of the transformer wires.

Depending on the wire height above ground and the wire gauge you change the turns ratio of the windings to accommodate the wires impedance but a 9:1 transformation will do the job in most installations.

#2 This is basically an air gap from center conductor to ground where the coax shield is directly connect to ground at an outside ground stake. Usually the device is a kind of tube filled with a gas that squelches the gap current after the voltage spike so it doesn't stay permanently shorted. The voltage will rise to the gap value, the tube will conduct for a period of time sufficient to drain the charge to a value below the gap value and then the current to ground is stopped.

I favor #1 (blocking) because the transformation of the wire impedance is useful by itself and 0 volts of the DC static voltage is all that ever reaches the radio input. #2 (shunting) will allow the DC static voltage to reach the radio input to the specified gap value of the static suppresser that is in use and the suppresser supplies no other benefit by its inclusion in the antenna system.

You sound like you know what you're talking about, but one thing gets
me. Here you say it will act as a choke and at the start of the
previous paragraph you say it won't. Why does transmission have a
different result from reception, or is there some other difference?

I had several old sw radios that worked fine except that the dial cord was slipping. Very annoying. But replacement cord is hard to find and can be tricky to replace. The problem is that the cord and tuning shaft became highly polished over the years and there wasn't much friction left. I got a can of "Gunk" Belt Dressing, sprayed some into a glass, and applied it to the cord and the tuning shaft with a camel's hair brush. That was three months ago and the tuning has been fine ever since with no slippage. The belt dressing is the type used to spray on automotive v-belts.

It's Voice of Tanzania-Zanzibar, transmitting from Zanzibar. At 1800-1810 they have news in English, a relay of an fm station there, Spice FM. Otherwise they are usually broadcasting in Swahili.

I've not heard them using English at the time you specified, but I'll check it in the future.

I was listening to South Africa on 11825 from Meyerton at 07:00 to 08:00
UTC with a nice signal if that interests you.

2006 Passport shows Tanzania and Brazil on 11735 at that time but in
other languages. ILG schedule does not show anyone broadcasting in
english on that frequency either.

You are just going to have to go back and ID it if you want to know.

One of the tricks Grundig and Telefunken used to employ, rather than the usual dial cord (which brings to the project it's own unique set of obstacles), was steel wire. It doesn't fray, has limited stretch, and if the wheels are clean, doesn't slip, either. It needs to be tensioned with a hefty spring, but in the absence of dial cord, which is getting difficult to find these days, steel wire is a good alternative.

I've restrung the dial on my S 53A using steel wire instead of dial cord, with exceptional results.

I have been a ham radio operator for over 30 years and at one time held a first class phone license that was good for the comercial radio repair.

When receiving the signal comes from the antenna it comes down on the outside of the inner wire and the inside of the outer sheild. Unlike Direct current which uses all the wire area, as the frequency goes up, the signal only uses part of the area. That is a copper tube can carry just as much signal as a solid wire the same diameter. Large coax (usually called hardline) is often made this way. There is nothing useful on the outside of the shield of the coax. In otherwords everything from the receiving antenna is on the inside of the coax and coiling it up has no effect .

When transmiting it is possiable that some of the signal from the antenna will couple or be introduced on the outside of the coax. This unwanted signal will come back down the coax on the outside of the shield and can cause problems with the transmitter and other electronics in the house. If the coax is wound in a coil it may choke off this unwanted signal. The coil is usually placed outside the house .

Rikk - you got a hell of a deal assuming it works OK. They go for
about $300 minimum on Ebay.

ZERO sunspots for about the 12th day running makes this the longest dry spell since the last lowest count in the last sunspot cycle 10 or so years ago.

Amazing conditions for those interested in Dxing the AM broadcast band with many long diastnace stations heard , even in the day time !

Currently in Australia the maximum SW usable frequency is about 15Mhz during the day and at night time it drops to about 9mhz.

???

Just get one of these autotransformer types. All parts of the
antennal system are at DC ground.

Which public policies and laws instituted by congress forced KMart to
run it's business so badly that customers abandoned it in sufficient
numbers to cause it's failure.

> Note - Don't Blame the Presidents : Bush, Clinton, Et Al

The workers chose to place their money in a 401K plan invested solely
in KMart stock. There is not a law against individuals making stupid
investment choices. They could have diversified their investments.

> IMHO - I would expect this of the Republicans who favor Big
> Business, but the Democrats claim to be for the Working People

> other Business Claims.

No, it is called priority as written into law. Secured debtors come
before senior debtors come before junior debtors, who come before
preferrred stock holders who come before common stock holders. KMart
employees through their 401K investments were nothing more than common
stock holders. They were last in line as common stock holders always
are.

I once read somewhere that rosin,(resin?) like the kind people use to rosin their violin bows works good on dial strings.I never have tried it though.I do own some old,old musical instruments and some rosin.

Hi Frank, thanks, it all appears to be working perfectly
I am very pleased with it
thanks
Rikk

Congratulations on a great deal!

At an estate auction there were several unadvertised pieces of amateur
radio equipment. I got a working National HRO500 for $25.00 but passed
on a Kenwood TS840 that someone else got for $50.00

My best estate sale find has been the following....

Cushman CE50-1-TG service monitor
Supertech De-soldering rework station
IFR 1000S service monitor
Icom 706MK2G
Yaesu FT-1000MP Mark 5
Yaesu FT-480R
Several power supplies
2 Bird wattmeters with various elements
Huntron Tracker 2000 Semiconductor tester
2 Large dummy loads
More test equipment and radio's that are stored away for future use/sell
when I decide what I want to set up. (about 8 of the 33 gallon Rubbermaid
tubs)
Lots, and Lots of other amateur and 2-way radio's
Basically 3 vanloads of nice stuff all for $800.00

The family just wanted the stuff gone and didn't have any way to store or
wait to sell for right prices

I tried to talk them into waiting but they said first money gets it
so.....:-)
